In Quebec province during May, 244 provincial certificates were issued, nearly all for workers travelling to construction jobs in the Chicoutimi area, the mapority of whom were labourers, although carpenters and a few other skilled tradesmen also were included in the number. Of these, 148 went from Quebec City and 27 from Montreal, the remainder going from Hull, Riviere du Loup, St. Hyacinthe, Sherbrooke, Thetford Mines, Val d'Or, Valleyfield and Victoriaville. In addition, Thetford Mines sent three welders and three carpenters to Sorel. Persons securing certificates from offices in Ontario totalled 860,—provincial, 799 and interprovincial, 61. For centres within their respective zones Fort William despatched 10 bushmen, 6 cookees and 6 highway labourers; the Port Athur office 373 bushmen, 30 river drivers, 19 cooks, 17 cookees, 15 carpenters, 14 camp builders, 5 teamsters, 4 camp clerks, 4 truck drivers, one dumper operator one stenographer, one checker, one tractor operator, one handyman, one watchman, one X-ray line operator, one foreman, one hoistman and 77 labourers for the Hydro Electric Company, and Sudbury 5 bushmen, 4 mill hands, 3 waitresses, one edgerman and one fireman; besides these, 46 railway labourers were conveyed from Sudbury to Sault Ste. Marie. Travelling from Cornwall, one labourer went to Orillia and from Fort Frances two carpenters and 12 labourers for the Hydro Electric journeyed to Port Arthur, while Kirkland Lake transferred 84 labourers for war industries as follows:—38 to Niagara Falls, 5 to Orillia, 9 to St. Catharines and 32 to Welland; North Bay also forwarded 46 labourers to St. Catharines and 5 bushmen to Timmins. The workers proceededing to interprovincial points consisted of 51 bushmen from Pembroke to Moncton,, 5 carpenters from Fort Frances to Prince George, 4 construction labourers from North Bay to Chicoutimi and one aircraft engine fitter from Toronto to Vancouver. Manitoba transfers at the reduced rate numbered 567, of which 65 were provincial and 502 interprovincial, the entire movement emanating from Winnipeg. Of those going to provincial points 7 miners, 6 watchmen, 2 hoistmen, one mucker and 27 mine labourers were bound for Flin Flon and 14 bushmen, 3 farm hands, 2 cookees, one cook and 2 construction labourers to localities within the Winnipeg zone. Outside the province 8 bushmen were despatched to Fort William; 190 bushmen, 38 cookees, 16 carpenters, 9 truck drivers, 4 tractor operators, 2 cooks, 2 bakers, 2 dragline operators, 2 riggers, 2 dishwashers, 2 drillers, one oiler, one shovel operator, and 68 labourers for the Hydro Electric to Port Arthur; 21 carpenters to Prince Rupert and 83 carpenters, 3 student engineers, one engineer and 47 construction labourers to Vancouver. Only 8 certificates were issued by offices in the province of Saskatchewan, one of which was for a ship's driller journeying from Saskatoon to Vancouver and the rest for 5

miners and 2 mine labourers being sent from Yorkton to Flin Flon. Business transacted by Alberta offices involved the use of 404 vouchers, 189 provincial and 215 interprovincial. Of the former, to points within its own zone, respectively, Calgary transferred 6 muckers and 2 miners, while Edmonton forwarded 27 deckhands, 19 cooks, 16 cookees, 16 miners, 14 truck drivers, 10 freight handlers, 9 bushmen, 5 muckers, 5 stewards, 4 mill hands, 3 fishermen, 3 mechanics, 2 marine engineers, 2 pursers, 2 waitresses, 2 hotel employees, one engineer, one carpenter, one clerk, one boat hand, one stevedore, one firemen, one dishwasher, one watchman, one accountant, one tractor driver, one prospector, one handyman, and 26 labourers. In addition, Calgary directed to Edmonton 2 clerks and 2 cookees. Interprovincially the same c entre forwarded 29 labourers (smelter) to Nelson and one machinist, one ship's plater and one pipefitter to Victoria, while Edmonton despatched to Kamloops, 8 bushmen, 3 mill hands, one trimmerman and one sawyer; to Prince Rupert, 71 mill hands, 30 bushmen, 20 lumber pilers, 13 cookees, 8 cooks, 7 swampers, 2 dishwashers, 3 jitney drivers, 2 teamsters, 2 carpenters, 2 mill labourers, one bookkeeper, one deckhand, one planer fitter, one sawyer, one blacksmith, one painter, one edgerman and one catskinner, and to Victoria, one machinist and one marine engine fitter. Profiting by the reduced rate in British Columbia 5 persons travelled to provincial employment. From Kamloops to points within its own zone proceeded 2 loggers, and from Vancouver, one cook to Kamloops and one miner and one cook to points within the jurisdiction of the Vancouver office.

Of the 2,088 workers who travelled at the reduced rate during May, 1942, 1,623 were carried by the Canadian National Railways, 355 by the Canadian Pacific Railway, 88 by the Temiskaming and Northern Ontario Railway, 11 by the Quebec Central Railway, 9 by the Northern Alberta Railway and 2 by the Pacific Great Eastern Railway.

Employment Conditions at the End of June

Placement activities, as reported by Employment and Claims Offices during the month of May, 1942, together with statistical summaries for that period are covered by an earlier section of this report. Later reports received from these offices indicate that conditions at the end of June were as follows:—

The agricultural outlook in Prince Edward Island and the Maritime Provinces was promising, almost every locality reporting crop prospects very favourable; there remained, however, a decidedly definite shortage of farm help. Strawberries were being harvested and prices were holding well. Good prices also were in evidence for live stock. The fishing industry is having a comparatively good year; lobster catches have been well above the average and while in some sections the season was over for lobster and mackerel, fishermen were engaged in salmon drifting. Cod and pollack were scarce, but herring fishing was expected to continue until fall, provided satisfactory markets were obtainable. Logging was active, with a good demand for bushmen, as some of the operators were cutting during the summer months; pulp peeling also was progressing, but there was evidence of a shortage of labour. Mining was steady in the area around Amherst; in the Sydney district some mines operated on short time. A limestone quarry had been reopened at Point Edward after having been closed for a period of ten years. Manufacturing plants worked steadily, except at Truro, where operations were curtailed owing to shortage of materials, or factories had been shut down for repairs and annual overhaul. Construction showed considerable progress; some projects having been completed, while others were getting under way. Moncton reported a good demand for labour at the Elementary Flying Training School. Wholesale and retail trade was good, although curtailed in some lines. Difficulty was experienced throughout the entire province in obtaining the necessary workers for domestic service.

Farmers in the Province of Quebec were busily engaged with preparations for the haying season and it is feared that there will be a serious shortage of farm hands when haying becomes general. Logging continued active in all districts, with many requests for woodsmen, and a scarcity of help of this type. Manufacturing maintained a steady level. Many calls for employees came from the Aluminum Company at Arvida, but in the city of Quebec a dispute in the shoe industry was partly responsible for the unemployment of 1,500 workers. Mining was active and experienced miners were requested in the Rouyn and St. Jerome areas. Some mines, however, had ceased operations for the duration of the war. Activity in the building industry was somewhat spotty and confined chiefly to Wartime Housing and National Defence projects, although in some places work had been temporarily suspended, owing to lack of necessary materials. Dam construction under way was progressing favour-

ably and provided employment for numerous men. Transportation recorded improvement. Wholesale and retail trade was steady, with a fair demand for labour in most localities. Hotel, restaurant and domestic help was at a premium and exceedingly difficult to secure.

The scarcity of agricultural help in the Province of Ontario was developing into a serious situation and in order to relieve this as much as possible, various industries were being called upon to release employees for haying and h arvesting. The situation regarding the fruit crop was being taken care of to a great extent by the Ontario Farm Service Force, which organization is enlisting the support of students and teachers during the school vacation period. The picking of cherries and small fruits was in full swing and a fair crop was being harvested. Logging operations were continuing and operators were finding it difficult to secure an adequate supply of competent bushmen. Mining companies too, were still calling for experienced miners, with a very limited number of men offering. Manufacturing showed increased activity, but reported a general shortage of labour. Skilled men for small arms and munition factories, as well as for shipbuilding, were badly needed. The pulp and paper industry showed a decline in output, but textiles materially increased production. Construction was holding up well, although good building tradesmen were scarce. Defence projects under way in various parts of the province showed progress and many orders were received from the various railways for extra gangs, and bridge and building maintenance men, etc. Institutions, such as hospitals, found it impossible to procure suitable workers, and hotels, restaurants and summer resorts also were decidedly short of help, domestics and charworkers being almost impossible to find. This situation is becoming more serious, as many of the persons usually employed in this service are turning to work in factories where the pay is more remunerative. In the city of Toronto a definite shortage of bookkeepers, stockkeepers and general office clerks was reported.

A steady demand existed for agricultural help in the Prairie Provinces, there being a definite call for workers in the beet fields. Crop prospects are excellent and help is urgently needed for the harvest. Fishing was steady, with firm prices and a ready market. Logging operations were continuing during the summer, but the scarcity of bush workers was hampering this industry. Coal mining was active in Alberta, with a demand for experienced miners. Considerable activity existed, also, in the drilling of additional oil wells. Manufacturing was brisk, with sawmill activity predominating. Textiles showed improvement, but a general shortage of factory labour was in evidence. Construction of the larger type, which consisted for the most part of Defence projects, as well as other undertakings already under way, were progressing favourably; local activity, however, was confined to the erection of dwellings and repair and maintenance work. A number of men had been brought in from the United States for work on the Alaska Highway, and a pipeline project in the northern part of the Province of Alberta also was advancing satisfactorily. Wholesale and retail trade was brisk, but with curtailment on certain lines of goods.

A decided shortage of orchard help and general farm hands was reported from British Columbia, although weather conditions in some localities had damaged the berry crop considerably. Haying was general and labour very hard to procure. Fishing was active, although fishermen were scarce. Logging camps operated on full time with a good call for fallers. Miners were in demand at base metal mines, where qualified applicants were lacking. Manufacturing concerns, throughout the province, were very busy and numerous skilled, semi-skilled and unskilled workers were needed. Construction was brisk, particularly in the northern part of British Columbia, where several large projects are under way. Transportation by bus, steamship and rail was heavy and wholesale and retail trade was good. Help for hotels, restaurants and domestic service was difficult to procure.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

IN view of the transference of the functions of the Employment Service of Canada to the Unemployment Insurance Commission, information formerly presented in this article concerning applications, vacancies and placements made by the offices of the Employment Service will now be found in another article entitled "Activities of Unemployment Insurance Commission," under the heading "Report of Employment and Claims Offices for May, 1942." In this section information is given concerning the number of applications for work, existing vacancies and the number of placements made through the Employment and Claims Offices of the Unemployment Insurance Commission. The latest available information concerning the employment situation in Canada is also given in another section, under the heading "Employment conditions at the end of June."

The accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting May 1, was 13,064, the employees on their payrolls, numbering 1,674,665, compared with 1,652,925 (revised) in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May was 2,208, having an aggregate membership of 352,821 persons, 2·4 per cent of whom were without employment on June 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of May, 1942, as Reported by Employers

Employment showed a further advance at the beginning of May, when the 13,064 establishments co-operating in the monthly survey of the Dominion Bureau of Statistics reported the addition of 21,740 persons to their working forces, bringing them to 1,674,665 at May 1. The index (1926 = 100) rose from 165·2 at April 1 to 167·4 at the date under review, while at May 1, 1941, the crude figure was 145·5. The general increase from April 1 was rather less-than-average for the time of year, with the result that the seasonally-adjusted index slightly receded from its all-time maximum of 175·0 at April 1 to 173·7 at May 1. This decline is the fourth noted since the outbreak of war, the previous reductions in the corrected index during this period having taken place at February 1 and March 1 in 1940, and at February 1, 1942. The latest adjusted index is the highest in the record, except that for the preceding month.

The general expansion in employment at the beginning of May was accompanied by an increase in the payrolls disbursed. The employees of the reporting firms in the manufacturing, logging, mining, communications, transportation, construction, services and trade industries were paid the sum of $47,887,408 at May 1 for services rendered in the week preceding. This was a per capita average of $28.60. The weekly average reported at April 1 had been $28.41. Including those in financial institutions, the men and women in recorded employment at May 1 numbered 1,738,018, whose earnings amounted to $49,795,070, an average of $28.65 per worker. The average pay envelope of those employed by the same establishments at April 1 had contained $28.47.

There were seasonal reductions in employment in logging at the beginning of May, some 14,900 men having been laid off since April 1. This decrease was unusually large for the time of year, although it was smaller than that reported at May 1, 1941. Mining also showed curtailment which rather exceeded the average. In the remaining industrial divisions, the trend of employment was upward. The greatest gains were in manufacturing, transportation and construction, in which 14,900, 6,400 and 14,200 additional employees

were reported, respectively. The increases in communications, services and trade were on a much smaller scale. In communications, transportation and services, the advances were above-normal for May 1; those in trade were less than usual. In construction, the number added to the payrolls was rather above the average, but the percentage gain was not equal to that reported at the beginning of May in the years since 1920.

Within the manufacturing division, there was especially important expansion in iron and steel, in which some 10,600 additional workers found employment. Animal food, lumber and chemical plants also reported substantial increases, while there was improvement on a smaller scale in textiles, beverages, clay, glass and stone, electric light and power, electrical apparatus, non-ferrous metals and miscellaneous non-metallic mineral products. In many cases these advances were of a seasonal character; those in textiles were contra-seasonal. On the other hand, leather, vegetable food, printing and publishing, tobacco and miscel-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

laneous manufacturing plants were slacker; to some extent, the contractions in employment were seasonal.

For May 1, 1941, 12,542 firms had furnished data showing that they employed 1,450,542 persons, as compared with 1,408,138 in the preceding month. Most of the improvement had then been reported in manufacturing, transportation and construction.

The unadjusted index numbers of employment in the eight leading industries at May 1 in recent years are as follows: 1942, 167·4; 1941, 145·5; 1940, 114·3; 1939, 106·2; 1938, 107·4; 1937, 106·3 and 1936, 99·5. The average for the calendar year 1926 is taken as 100 in calculating these indexes.

The Course of Wartime Employment

As stated in recent reports on employment and earnings, the value of any comparison of the volume in employment as presently existing with that indicated at the opening of the war has been partly nullified by the seasonal movements in industry from the late summer to the early spring; industrial activity ordinarily reaches its peak for the year about September 1 or October 1, after which fairly continuous seasonal curtailment usually reduces employment in the first few months of the year to its lowest point in the twelve months. In view of these facts, the present comparison of the situation indicated at May

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at May 1 and at April 1, 1942, by Establishments furnishing Statistics, and Weekly Earnings of these Employees as Paid on or about May 1 and April 1.

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed in Table III, with the exception of electric light and power.

56615—6½

1, 1942, with that at September 1, 1939, is greatly abbreviated.

Industrial activity in the Dominion has shown an extremely important growth during the first thirty-two months of the war; the interruptions in the generally upward movement have been almost wholly due to seasonal contractions in the divisions particularly subject to such influence. Although these factors have recently reduced employment in a number of groups in both manufacturing and non-manufacturing classes, the general index has risen by 39·9 per cent between September 1, 1939, and May 1, 1942. The importance of this gain is emphasized by comparison with that of about 14½ per cent in the five years ending in 1939, while in the period from 1921 to 1939, the general index rose only by approximately 28 per cent.

For obvious reasons, the response of the manufacturing industries to war-time demands has been substantially greater than that of any other class. From September 1, 1939, to May 1, 1942, the index number of employment in factories rose by 75½ per cent, while the general increase in the non-manufacturing groups, in spite of important seasonal curtailment in some branches (notably construction), was 4·1 per cent.

The durable goods industries have shown especially impressive gains; the index number in this class has risen from 100·4 at September 1, 1939, to 237·8 at May 1, 1942, or by 136·9 per cent. The number of persons employed in the manufacture of "heavy" goods constituted over 53 per cent of all those engaged in manufacturing at May 1, 1942. This proportion greatly exceeded that of 40 per cent reported in the durable goods industries at the outbreak of hostilities. Employment in the non-durable goods class has also shown pronounced expansion during the period of the war, the index rising from 126·6 at September 1, 1939, to 175·0 at May 1, 1942. This was an increase of 38·2 per cent. Activity in these industries is usually relatively quiet during the winter, owing to seasonal slackening in certain divisions, notably the food group. In spite of this factor (which also operates in the case of some lines in the durable goods category) employment in the large majority of manufacturing industries was considerably more active at the latest date than it was at September 1, 1939.

Although there has been important seasonal curtailment during the winter and early spring in construction and some other classes, employment in the non-manufacturing group as a whole was, as already stated, 4·1 per cent higher than at September 1, 1939. Seasonal changes in these classes are largely responsible for the decline in this rate of increase from 14·6 per cent at September 1, 1941, over September 1, 1939, when the seasonal factor

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

did not complicate the comparisons. The following are the percentage increases in the index numbers in the indicated industries in the first thirty-two months of the war: logging, 162·9 per cent, mining, three per cent, communications, 18·8 per cent, transportation, 15·7 per cent, services, 16·2 per cent, and trade, 13·8 per cent. In construction as a whole, on the other hand, there was a loss of 28·3 per cent. In building, the increase of 64·5 per cent at May 1, 1942, as compared with September 1, 1941, largely resulted from war-time requirements. There was also a gain of 5·3 per cent in this comparison in the staffs

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	May 1 1942	April 1 1942	May 1 1941

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

of railway construction and maintenance departments. On the other hand, highway construction showed a large decline from September, 1939. The loss was partly seasonal in character, but was also due to the established policy of postponing all but essential work until after the war, while in 1939 a considerable program of road work for the relief of unemployment was in progress.

Statistics of Earnings

The present tabulation of statistics of weekly payrolls is the fourteenth made in as many months, the first material of the kind in the Dominion having been collected with the employment data for April 1, 1941. However, the information received in the first two tabulations was incomplete, mainly because many employers were unable to furnish the additional statistics without a period of preparation. The payroll figures obtained in the surveys for April 1 and May 1, 1941, are therefore not wholly comparable with those since tabulated, and have been disregarded. Comparisons with the corresponding period of last year will accordingly shortly be available. The statistics of the present report are subject to revision.

The 13,064 establishments in eight leading industrial groups furnishing information at the beginning of May reported the distribution of $47,887,408 in weekly salaries and wages to the 1,674,665 men and women on their staffs at that date. These same employers had reported 1,652,925 workers at the first of April, whose earnings in the week preceding had amounted to $46,961,748. This gain of 1·3 per cent in the number of recorded employees at May 1 was accompanied by an increase of $925,660, or two per cent, in the aggregate payroll. The per capita weekly average, at $28.60, was higher by 19 cents than the previous maximum average of $28.41 paid at April 1.

In the last report on employment and payrolls, the earnings of the 1,652,810 employees of the 13,037 co-operating establishments were given as $46,959,087, paid on or about April 1 for services rendered in the last week in March. The per capita average based on this total was also $28.41. The present report shows slight alterations in some of the figures previously issued, mainly as a result of the inclusion of late returns.

Table 1 contains a summary of the statistics for the provinces, the eight leading cities, and the main industrial groups.

Index Numbers of Earnings.—Pending the establishment of a more satisfactory basic period for an index number of earnings, the statistics of payrolls reported at June 1, 1941, as having been paid for services rendered in the last week in May, have been revised to serve as a starting point from which may be measured the current changes in the purchasing power distributed in salaries and wages by the establishments co-operating in the current surveys of employment and earnings. The employees of such firms constitute a large proportion of the total number of wage-earners engaged in industries other than agriculture, governmental, educational, domestic and personal service in the Dominion. The presentation of the payroll data in the form of an index number gives a clearer picture of the situation than can be obtained from the use of the current aggregate or average per capita figures. The latter especially are very considerably affected by the dilution of labour which has been a marked feature of the situation in recent months.

The recent movements of employment and earnings in the eight leading industries and in manufacturing as a whole, are shown for the Dominion in the following table; the index numbers of employment have been converted from their original base, 1926=100, to June 1,

INDEX NUMBERS OF EMPLOYMENT AND PAYROLLS, BASED ON JUNE 1, 1941=100, TOGETHER WITH PER CAPITA WEEKLY EARNINGS

	All Industries			Manufacturing

1941, for comparison with the index numbers of payrolls.

The increase of 9·5 per cent in recorded employment since June 1 of last year has been accompanied by a gain of 24 per cent in the aggregate salaries and wages distributed by the co-operating establishments. The latest index of payrolls, at 124·0, is the maximum in the period of observation. The all-industries per capita average rose from $28.41 at April 1, to $28.60 at May 1. These two are the highest in the record. The changes recorded in the cost-of-living index in the elapsed months of 1942 have not sufficed to alter the rate of the cost-of-living bonus as established late in 1941.

In the manufacturing division, the index numbers of employment and payrolls have shown especially large advances in the period for which data have been prepared. A rise of 20·4 per cent in employment since June 1, 1941, has been accompanied by a gain of 37·4 per cent in the aggregate payrolls distributed. The per capita figure, at $29.19 paid on or about May 1, is the highest yet recorded, representing an increase of $3.62 since June 1, 1941, in the weekly average. This increase, which is particularly impressive in view of the continued dilution of labour, partly represents the payment of higher wage rates over the eleven months, and a more extensive use of the cost-of-living bonus, but is also partly accounted for by growing activity in the heavy manufacturing industries, together with overtime work. As already stated, the recent losses in employment in certain classes of manufactures, as in a number of non-manufacturing divisions, have taken place mainly in groups in which the average earnings are ordinarily lower than in the heavy manufacturing industries, a change in the composition of the total working force which has tended to raise the per capita average. Accordingly, it may be concluded that the more recently recorded increases in the per capita average for manufacturing as well as in the more general figures, are, to some extent, seasonal in character.

Earnings by Industries

Manufacturing.—The employees on the payrolls of the co-operating manufacturers throughout the Dominion, numbering 1,053,500, were paid $30,751,881 for their services in the preceding week. The same firms had employed 1,038,599 persons at the beginning of April, when they had reported the distribution of $30,053,057 in weekly earnings to their staffs. There was thus an increase of $698,824 in the payroll of factory employees for the week ending May 1. The increase of 1·4 per cent in the number of employees was accompanied by that of 2·3 per cent in the aggregate payrolls. The per capita weekly average accordingly continued to mount, rising from $28.94 received on or about April 1, to $29.19 at May 1. These two are the highest per capita figures yet recorded in manufacturing as a whole.

A further important increase was indicated in the production of durable goods, in which the reported payrolls also showed a relatively larger gain, employment in this class advancing by 2·4 per cent, while the weekly payrolls rose by 3·4 per cent since April 1. Where the index in the former has risen by 29·2 per cent since June 1, 1941, that of earnings had mounted by 51 per cent; this growth is partly due to overtime payments and the cost-of-living allowance. Of the total increase indicated in manufacturing as a whole at May 1, 1942, as compared with April 1, $538,031 was reported in the iron and steel division. Employment and payrolls in this group have risen by 41·1 per cent and 62·8 per cent, respectively, since June 1, 1941.

In the non-durable products group, there was a gain of 0·3 per cent from April, while the earnings rose by 0·7 per cent. The index of employment in this class has risen by 12·8 per cent from June 1, 1941, while the increase in the indicated payrolls has amounted to 23·4 per cent.

The highest earnings in the manufacturing classes were again those reported in the production of miscellaneous non-metallic minerals, largely petroleum products, with those in electric light and power plants coming in second place. The earnings in the iron and steel, pulp and paper, non-ferrous metal, electrical apparatus and beverage industries were also unusually high. These classes employ a large proportion of males, and require many highly skilled and experienced workers, while overtime payments also enter into the situation.

In general, the lowest per capita averages were reported in the tobacco, leather and textile groups, in which considerable numbers of women are employed; not only are the earnings in these categories affected by the sex distribution, but also by the age distribution of workers therein, since the female employees tend, in the main, to belong to the younger age groups. In comparing the earnings reported in various industries, it must again be noted that the existence or the absence of overtime work is an important factor in the averages, while the employment of any considerable number of casual workers greatly affects the per capita earnings in any industry.

Logging.—Employment in logging showed a further seasonal decrease, amounting to 24·1 per cent, while the aggregate payrolls declined by 20·2 per cent. As a result of these changes, the per capita weekly average showed a gain, rising from $20.26 paid at April 1, to $21.30 paid at May 1. The difference is largely due to the retention of the more highly paid workers as operations in many camps drew to a close. It must again be mentioned that the figures of payrolls given in this report make no allowance for the value of board and lodging, frequently a part of the remuneration of employees in logging camps.

Mining.—There was a further reduction of 0·8 per cent in employment in mining, in which the reported aggregate of earnings decreased by 1·7 per cent. The statistics show that 81,076 persons were paid $2,823,838 at May 1; this was a per capita figure of $34.83. The average pay envelope of those employed at April 1 had contained $35.11.

Communications.—In communications, there was an increase of 1·9 per cent in employment, while the recorded payrolls rose only by 0·7 per cent. Accordingly, the average earnings showed a decline, falling from $28·02 at April 1, to $27.71 paid at May 1.

Transportation.—The transportation industries reported an aggregate working force of 131,134 men and women at May 1, when the weekly earnings distributed amounted to $4,523,068. The former figure was higher by 5·1 per cent than that at April 1, while the payrolls increased by 4·7 per cent. The average earnings were rather lower, the per capita figure being $34.49, compared with that of $34.64 paid at April 1.

Construction.—Moderate seasonal gains were indicated in construction, in which the personnel increased by 11·5 per cent, and the aggregate payrolls in the group as a whole by 7·9 per cent. There was expansion in employment in building, highway and railway construction and maintenance; in highway and railway work, the reported payrolls were also higher, while those in building were rather lower. The per capita average earnings gained in highway and railway construction and maintenance, but those in building were smaller. The average is construction as a whole was also less, falling from $26.54 at April 1, to $25.73 at May 1.

Services.—The service establishments furnishing returns reported 2 per cent more employees, with an increase of 3·9 per cent in the reported payrolls. The average earnings therefore showed an advance, rising from $16.98 at April 1 to $17.30 at May 1. These averages are lower than in any other industrial group, partly because of considerable proportions of female and part-time workers, and partly because the earnings quoted exclude the value of board and lodging, in many cases a part of the remuneration of employees in hotels and restaurants. This group accounts for some 60 per cent of those included in the service industry.

Trade.—There was a gain of 0·3 per cent in the employees indicated in trade, in which the aggregate payrolls distributed were greater by 0·7 per cent. The per capita earnings were therefore slightly higher, being $24.15 at May 1, as compared with $24.06 at April 1.

Finance.—In the financial group, 63,353 men and women were reported to have been paid $1,907,662 at May 1, a per capita average of $30.11. In the last return, the employees of the co-operating financial institutions had aggregated 63,451, with weekly earnings of $1,896,344, an average of $29.89 per person. The inclusion of the data for the financial division raised the general per capita figure of earnings in the Dominion to $28.47 at April 1, and $28.65 at May 1. Without the statistics for this group, the weekly average at the former date was $28.41, and at the latter, $28.60.

Earnings by Provinces

Firms in New Brunswick reported further reductions in employment, and there was an insignificant decline in the aggregate weekly payrolls disbursed in that province. In Alberta, there was also a falling-off in the reported earnings, but in the remaining areas employment and aggregate payrolls increased. The largest gains were in British Columbia and Ontario.

The weekly average per capita earnings in Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia were higher at May 1 than at April 1.

Preliminary data on employment and earnings for a number of industries in the economic areas are given in Table 1. Manufacturing again reported heightened employment in each of the areas, accompanied by proportionately larger advances in the weekly wage payments, so that the average per capita earnings generally advanced. There were also gains in both cases except in the Maritime Provinces, where there was a seasonal slackening in activity. The only exception to the generally downward movement in logging was British Columbia.

Earnings by Cities

The number of employees and the total weekly payrolls disbursed at May 1 by the firms co-operating in seven of the eight lead-

ing cities for which statistics are tabulated were higher than at April 1. In these seven centres, viz., Montreal, Quebec, Toronto, Hamilton, Windsor, Winnipeg and Vancouver, the per capita figures were also higher. In Ottawa, however, employment on the whole was rather quieter, and there was a falling-off in the reported earnings. As in the provinces, the general trends in manufacturing were upward, while there were variations in the movements in other industrial divisions within the cities.

Table 1 gives statistics of employment and earnings for leading industries in the eight cities whose returns are segregated each month.

Employment by Economic Areas

The trend was upward in all provinces except New Brunswick, where a seasonal decline was indicated. The largest gains were in British Columbia. Activity in all provinces was at a decidedly higher level than at May 1 in 1941, or any other year for which information is on record.

Maritime Provinces.—On the whole, the advance in employment in the Maritime Provinces was below the average for May 1 in the years since 1920; the index was nevertheless at its peak for that date in the record. Nine hundred and thirty-two firms reported 117,240 employees, or 791 more than at April 1, 1942. The tendency was favourable in Prince Edward Island and Nova Scotia, but seasonal curtailment in logging operations in New Brunswick resulted in a general decrease in employment in that province, in spite of improvement in certain other classes.

Activity in the Maritime Provinces, taken as a unit, was seasonally reduced in logging camps; there was also a relatively small decline in transportation. On the other hand, manufacturing was rather brisker, mainly in the iron and steel and chemical divisions. Construction showed considerable improvement, and mining, communications, services and trade reported minor gains.

The 882 establishments furnishing statistics for the beginning of May last year had an aggregate staff of 102,086 persons, being greater by 946 than at April 1, 1941. The index then stood at 136·5, compared with 156·7 at May 1, 1942.

Quebec.—The upward movement was resumed in Quebec, according to 3,295 employers of 519,341 men and women, as against 516,163 in the preceding month. This increase of 3,178 was not so large as that noted at May 1, 1941, being also smaller than the average gain at that date in the experience of the last twenty-one years. However, the level of employment was higher than at any other May 1 for which information is available.

Further important improvement took place in manufacturing as compared with April 1; there were moderate additions to staffs in a number of industries, notably in tobacco, beverage, electrical apparatus, non-ferrous metal and iron and steel plants. The expansion in the last-named was the largest. On the other hand, lumber, pulp and paper and a few other classes were quieter. Logging camps continued to make large seasonal reductions in their personnel, nearly 6,600 men being laid off in this industry; trade also released a few employees. On the other hand, communications, transportation, building, highway construction and services showed greater activity, the increase in transportation and in the construction group as a whole being considerable. Employment was much brisker than at the beginning of May of last year, when 3,121 firms had reported 424,278 employees, or 10,614 more than in the preceding month; the index then stood at 146·8, many points lower than that of 177·9 at the date under review.

Ontario.—There was further industrial expansion in Ontario; the movement was seasonal, but the gain was below average according to the experience of earlier years of the record. Improvement was reported in manufacturing, mining, transportation, construction and maintenance, services and trade, while large seasonal contractions were noted in logging. In the manufacturing group, there were considerable increases in lumber, chemical and iron and steel plants, together with smaller advances in animal food, beverage, electrical apparatus and non-ferrous metal plants. On the other hand, leather, vegetable food, pulp and paper, rubber and tobacco factories were slacker.

The working forces of the 5,636 co-operating establishments included 713,932 persons, compared with 709,595 at April 1. The latest index (175·9), was higher than in any other month in the period of observation.

Employment at the beginning of May, 1941, had increased considerably, according to statistics from 5,413 employers whose staffs aggregated 633,790. The index was then 156·4.

Prairie Provinces.— Manufacturing, transportation, construction and maintenance, services and trade showed heightened activity in the Prairie area, the greatest additions being in highway and railway construction. In the factory group, a substantial part of the advance took place in the animal food, textile and iron and steel divisions. On the other hand, mining and logging were seasonably slacker.

Statements were compiled from 1,814 firms in these provinces, whose employees increased from 172,158 at the beginning of April, to 176,826 at May 1. This advance, to which all three provinces in the Prairie area contributed, was not so pronounced as that recorded at the same date in 1941, but approximated the average at May 1 in the years since 1920. The index, standing at 130·7, was several points above that of 124·1 at the corresponding date of last year, being also higher than in any other May in the record. Statistics for May 1, 1941, had been received from 1,804 establishments, providing work for 167,881 men and women.

British Columbia.—Employment in British Columbia showed further marked increases; these were on a scale considerably above the average at May 1 in the experience of the last twenty-one years. The latest index was 158·8, the maximum to date in this record. An aggregate payroll of 147,026 persons was reported by the 1,387 employers furnishing data for May 1, 1942, who had 138,560 on their staffs at April 1, 1942. Logging, transportation, construction and maintenance, services and manufacturing showed heightened activity; the gains in logging and services were small, while those in manufacturing were particularly large. Within this division, food, lumber and iron and steel plants showed the greatest additions to the working forces. The expansion in iron and steel factories was the largest on record. There were moderate declines in mining and trade at the beginning of May.

For May 1, 1941, 1,318 firms had reported 122,507 workers, as compared with 119,174 in the preceding month.

Table 11 gives index numbers by economic areas.

Employment by Cities

Seven of the eight cities for which statistics are segregated reported heightened employment; considerable improvement was indicated in Montreal, Quebec, Toronto, Hamilton, Windsor, Winnipeg and Vancouver, while little general change was shown in Ottawa. Except in Vancouver, the gains were on a smaller scale than those noted at May 1, 1941, but employment at the latest date in each of these centres was in greater volume than at the beginning of May of any earlier year of the record. In Montreal, Quebec, Toronto, Hamilton, Windsor and Vancouver, new all-time highs were indicated.

Montreal.— Manufacturing, transportation, construction and services recorded advances in Montreal, those in the two groups first named being extensive. Within the manufacturing division, considerable additions to staffs were made in iron and steel factories; textile, tobacco and beverage plants were also busier, while small declines were noted in a number of industries. The 1,913 co-operating employers reported 247,258 persons on their payrolls, compared with 243,335 at April 1. This increase was not equal to that of May 1, 1941, being also below the average at the same date in earlier years of the record. Nevertheless, reported employment reached a new all-time maximum at the beginning of May, 1942. The 1,813 establishments furnishing data for the same date in 1941 had increased their employees to 206,840, from 200,859 at the beginning of April of last year.

Quebec.— Statements were tabulated from 228 firms with 29,964 employees, as against 29,066 at April 1. Most of the betterment took place in manufacturing, but the trend was also upward in construction, services and trade. The general gain was smaller than that recorded at May 1, 1941, although it exceeded the average at the beginning of May in preceding years. The index, at 214·3, was at its highest point in the record. The 216 employers furnishing data for May 1, 1941, had reported 21,823 workers on their payrolls.

Toronto.— Construction and maintenance, transportation, services, trade and manufacturing showed heightened activity in Toronto. The largest gains took place in the last-named, in which the additions in iron and steel and chemical products were most outstanding. According to information obtained from 1,971 concerns in Toronto, their staffs aggregated 227,403, as compared with 224,634 at April 1. This advance was not so large as that indicated at May 1 of last spring, but exceeded the average gain at the same date in the years since 1922, when the record for Toronto was commenced. Employment was in greater volume than at the beginning of May, 1941, when statistics had been received from 1,876 establishments employing 191,638 assistants, or 5,608 more than in the preceding month; the index then stood at 149·7, compared with 176·9 at the latest date.

Ottawa.—The trend in manufacturing and services was moderately upward in Ottawa, but construction was quieter; 252 employers reported staffs aggregating 20,633, compared with 20,652 in the preceding month. The index, at 156·6, was many points higher than at the same date of last spring, although a decidedly larger advance had then been indicated. Two hundred and forty firms had made returns for May 1, 1941, and their employees had numbered 19,191, compared with 18,749 in the month before.

Hamilton.—A combined working force of 60,308 was employed by the 345 co-operating

establishments, as against 59,272 in their last report. Manufacturing was considerably more active, while the various non-manufacturing divisions showed slight improvement. Industrial employment in Hamilton was at a higher level than at the same date of last year, when a larger advance had been recorded by the 337 reporting employers, whose personnel included 51,310 men and women.

Windsor.— There was a further gain in Windsor; returns for May 1 were tabulated from 204 firms with 36,504 workers, compared with 36,264 in the preceding month. The moderate improvement took place largely in manufacturing (mainly in textile and beverage plants), and in construction, transportation and trade. Additions to their payrolls had also been indicated by the 195 industries reporting at May 1, 1941, when they employed 31,199 persons. Employment was then at a much lower level, the index standing at 227·9, as compared with 268·6 at the date under review.

Winnipeg.— Manufacturing, construction, services and trade showed heightened activity in Winnipeg, where the 560 co-operating employers had a staff of 54,400, compared with 53,122 at April 1. Employment generally was more active than at the same date of last year, when a larger advance had been noted in the 556 establishments from which information had been received; their personnel had included 49,879 men and women.

Vancouver.—The number engaged in manufacturing operations increased substantially in Vancouver; especially important expansion was noted in iron and steel factories. Transportation and construction were also brisker, while trade reported a falling-off. According to data received from 607 firms in this city, they had enlarged their working forces from 62,946 persons at April 1 to 68,461 at May 1. The index was many points higher than at the beginning of May, 1941, when a smaller advance had been reported by the 582 co-operating employers, whose staffs had included 49,682 men and women.

Employment by Industries

Manufacturing.—There was further important expansion in manufacturing operations at the beginning of May. The increase of 14,901 in the reported personnel considerably exceeded the average number added to the payrolls at May 1 in the years since 1920, although it was smaller than the gain indicated at that date in 1941 and in three of the nineteen pre-war years for which data are available; the percentage increase, however, was slightly below normal for the beginning of May. Returns were tabulated from 7,277 establishments with a combined payroll of 1,053,500 men and women, as compared with 1,038,599 in the preceding month. This increase of 1·4 per cent raised the index (1926=100) from 199·4 at April 1, to a new all-time peak of 202·3 at May 1; the figure for the same date in 1941 had been 162·3. There was thus an increase of 24·6 per cent over the twelve months; the gain indicated at May 1, 1941, over the same date in 1940 had been 29·1 per cent.

Reflecting the less-than-normal percentage gain at the date under review, the seasonally-adjusted index showed a slight decline, falling from 201·1 at April 1 to 200·8 at the beginning of May. This is only the fourth occasion since the outbreak of war on which the upward movement of the seasonally-adjusted index has been checked. However, the latest figure was higher than in any earlier month of the record except April 1, 1942.

A large proportion of the increase in manufacturing as a whole was reported in iron and steel plants, which absorbed 10,641 additional workers. The animal food, lumber, chemical, beverage, electrical apparatus, non-ferrous metal, textile and clay, glass and stone divisions also showed expansion. On the other hand, leather, vegetable food, pulp and paper, printing and publishing and tobacco factories reported curtailment in employment, which in some cases was seasonal in character.

For May 1, 1941, information had been received from 6,883 factories, employing 843,560 persons, an increase of 21,335 from their April 1 payrolls. The most marked gains had then also been made in the iron and steel division.

The unadjusted index numbers in manufacturing at May 1 in recent years are as follows, based on the 1926 average as 100:— 1942, 202·3; 1941, 162·3; 1940, 125·7; 1939, 108·4; 1938, 110·6; 1937, 113·8 and 1936, 102·7.

Logging.— There were seasonal declines in logging on a scale exceeding the average for May 1 in the years since 1920; however, the general reduction was smaller than at May 1, 1941, when the index, at 107·9, was considerably below the latest figure of 158·5. This is the highest for May 1 in the record of 21 years. The 462 co-operating firms employed 47,027 men, or 14,904 fewer than at the beginning of April. There were general losses except in British Columbia, where a moderate gain was indicated.

Mining.— Returns were received from 428 mine operators with 81,076 persons in their employ, as against 81,762 in the preceding month. Coal-mining was seasonally slacker and there was a falling-off in the extraction of metallic ores, but improvement was shown in the quarrying and other non-metallic mineral division. Employment in mining as a whole

was at a slightly lower level than at May 1, 1941; the index then stood at 174·8, compared with 173·5 at the date under review.

Communications.—An increase was indicated in employment on telephones and telegraphs. The index in communications was higher than at the same date of last year, when a decrease had been noted. The branches and companies co-operating reported an aggregate working force of 27,702 persons, compared with 27,189 at April 1, 1942.

Transportation.— The expansion in transportation was pronounced, considerably exceeding the average advance at May 1 in the last 21 years. Improvement was indicated in the three branches of transportation—steam railway, local and water. The gain in the last named was greatest. A personnel of 131,134 men and women was employed by the 558 companies and divisional superintendents making returns, who had 124,721 employees at April 1. The index stood at 104·1, as compared with 99·2 at the beginning of May, 1941. The latest index was the highest for May in any year since 1930.

Construction and Maintenance.—The trend of employment in building, highway and railway construction and maintenance was seasonally upward. The largest increase took place in work on the highways. On the whole, 14,223 persons were added to the staffs of the 1,463 employers making returns, who had a combined working force of 137,444. The number taken on was smaller than that noted at the same date of last year, but was above the average for May 1 in the period 1921-1941; the percentage gain, however, was below normal. The latest index, at 109·3, was lower than that of 120·0 reported at the beginning of May in 1941.

Services.—Heightened activity was indicated in laundering and dry-cleaning plants and in hotels and restaurants. Statements were received from 615 firms in these industries having 39,272 workers, as against 38,491 in their last report. The increase was above average, although it was not so large as that noted at May 1 in either 1940 or 1941. Employment was at its peak for the first of May in this record of over twenty-one years.

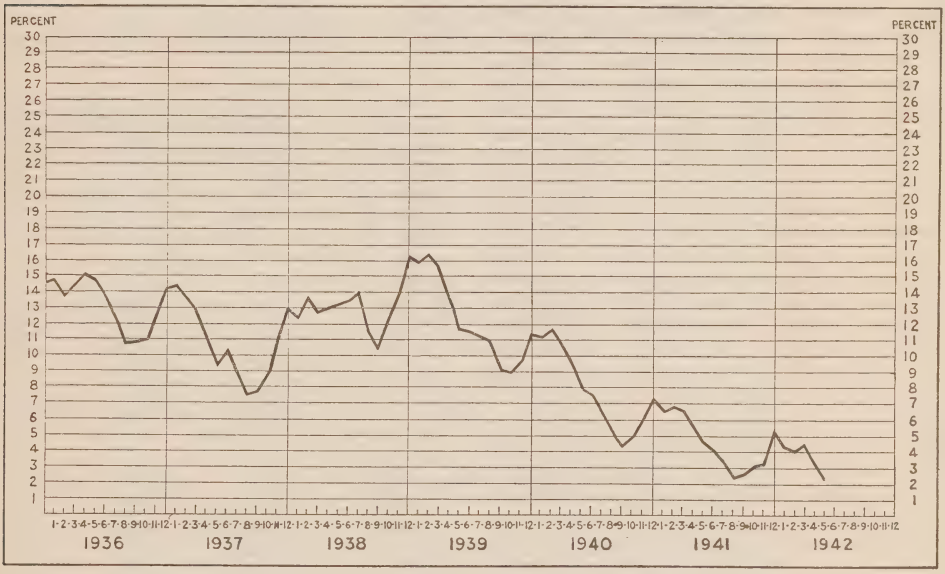
Trade.— Moderate additions to staffs were reported in retail trade, while wholesale houses released some employees. The general gain was less than normal for the season. Nevertheless, the level of activity was above that at May 1 in any other year for which statistics are available, with the exception of 1941, when the index was slightly higher. The co-operating merchants, numbering 2,200, enlarged their forces by 499 persons to 157,510 at the date under review.

Index numbers by industries are given in Table III.

Employment in Trade Unions at the close of May, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons, who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference, only, to the organizations reporting.

There were 2,208 reports tabulated in May, having a total membership of 352,821 persons, of whom, 8,535, or a percentage of 2·4 were unemployed. These members were to a large extent, temporarily out of work. The percentage who were unemployed in the previous month was 3·3, and in May, a year ago, it was 4·6.



The considerably higher employment level which was indicated in the May reports was due in part, to the substantial seasonal improvement for members in the building and construction trades; unemployment in May standing at 8·4 per cent, in comparison with 12·5 per cent in April. Still higher employment levels were in evidence, likewise, in the manufacturing and transportation industries. As will be seen in Table II, the unemployment percentages in May were 1·9 and 1·3 respectively, whereas in April the corresponding percentages were 2·4 and 1·5. Unemployment for union members in mining declined from 5·5 to 3·9 per cent and among fishermen there was a noteworthy employment increase, the percentage of members who were out of work in May being 6·0, compared with 12·5 per cent in April.

Table I shows the percentages of unemployment in trade unions by provinces. It will be seen that these ranged from 1·1 per cent unemployed in British Columbia to 4·5 per cent in Alberta. Considerably higher employment levels were apparent in Ontario, Manitoba and Alberta. Unemployment among Ontario members dropped from 4·4 per cent in April to 2·5 per cent in May. This improvement was due mainly to seasonal expansion for workers in the building and

construction trades, and the re-employment of a large number of workers in the reorganized automobile plants. Seasonal increases in building and construction in Manitoba and better conditions among coal miners in Alberta accounted for the higher employment levels manifested in reports received from unions in these provinces. Fractional employment increases only, were in evidence in Nova Scotia, Quebec, Saskatchewan and British Columbia; in New Brunswick, the percentage of members without work in May remained unchanged at 1·6. A comparison with the conditions at the end of May, 1941, as shown in Table I, disclosed a marked employment increase in Alberta, the percentage of members out of work standing at 4·5 as against 12·0, a year ago. In Quebec and British Columbia also, the employment levels were much higher, while in Manitoba and New Brunswick there were increases in work, although to a lesser degree; fractional improvement, only, was reflected in reports received from Nova Scotia and Saskatchewan unions.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of unemployment in these cities ranged from 0·6 per cent in Saint John to 3·2 per cent in Winnipeg. There was a noteworthy expansion in work in Edmonton, unemployment declining from 6·4 per cent in April to 2·2 per cent in May. A substantial employment increase was apparent in Toronto, the unemployment percentage being 2·6 in comparison with 4·1 per cent in the preceding month. Employment in Winnipeg and Regina, likewise, was high, a moderate improvement only, however, being shown in each case, over April conditions. Fractional employment increases were reflected in Saint John and Vancouver, while in Halifax and Montreal there were fractional declines. In comparison with conditions as reported in May, a year ago, Edmonton and Saint John unions reported pronounced increases in work, unemployment in the former city dropping to 2·2, from 10·0 per cent in the corresponding month, a year ago, while the comparative percentages in Saint John were 0·6 and 6·5 respectively. In Halifax, Vancouver, Montreal and Winnipeg, there were employment advances, although to a lesser degree. In Regina there was a fractional decline in work and in Toronto the percentage of unemployment increased from 1·5 in May, a year ago, to 2·6 per cent in the month under review.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The accompanying chart illustrates the trend of unemployment from January, 1936, to date. The curve of unemployment in May, 1942, rested at a substantially lower level than in the previous month, thus indicating a noteworthy employment expansion. The point of the curve was at a distinctly lower level than that shown in May, a year ago, thus reflecting a pronounced improvement.

There were 717 reports tabulated from unions in the manufacturing industries. These organizations had a total membership of 177,898 persons, of whom, 3,345, or a percentage of 1·9 were without work compared with percentages of 2·4 in April and 3·1 in May, a year ago. In comparison with the preceding month a very much higher employment level was in evidence among tailors, although their membership was small, unemployment showing a decline among these workers from 21·3 per cent in April to 11·0 in May. Unions in the iron and steel trades continued to report a very high employment level, unemployment being reported at 1·5 per cent compared with 3·0 in April. Among workers in miscellaneous manufacturing industries, likewise, conditions were somewhat better, although unemployment was still high, standing at 16·2 compared with 21·0 per cent in the previous month. Leather and fur workers' unions reflected fractional improvement; among the leather workers unemployment stood at 7·1 per cent as against 7·3 in April, and among fur workers the unemployment percentage declined fractionally from 10·6 to 10·5 per cent in May. Among those unions reporting a fully employed membership in May as in April, were soft drink workers, cigar and tobacco workers, hat, cap and glove workers, butchers, meat and fish packers, rubber, jewellery, and gas workers. The unemployment percentage among bakers and confectioners, papermakers and clay, glass and stone and woodworkers remained unchanged; there was fractional unemployment, only, among the workers in these trades. Employment remained very high among electric current employees, and textile workers, although in each case a fractional decline in work was observed. Among printing tradesmen, and metal polishers there were fractional decreases in work, unemployment increasing in the former group from 1·8 per cent to 1·9 in May and in the latter trade from 2·4 in April to 2·6 per cent in the month under survey. Due to the usual seasonal conditions, garment workers reported a fair reduction in employment, 3·3 per cent being out of work at the end of May, in comparison with 0·8 per cent in April. In comparison with the situation in May, a year ago, leather workers were much better employed, and among garment workers the percentage of 3·3 reported as being out of work in May was much lower than that of May, a year ago, when 6·4 per cent of these workers were unemployed. A slightly higher employment level was apparent among members in the iron and steel trades. Cigar and tobacco, jewellery and gas workers were fully employed in both months. Among metal polishers there was a slight recession in available employment and fur workers reported an appreciable contraction in work.

Returns were received from 54 unions of coal miners, having a total membership of 21,057 persons, of whom, 795, or a percentage of 3·8 were unemployed in comparison with 5·0 per cent in April, 1942 and 8·8 per cent in May, 1941. Compared with the previous month, Alberta unions indicated a noteworthy expansion in work, unemployment dropping from 13·3 per cent to 9·3 in May. A fractional advance in employment was observed in British Columbia, in which province there were very few of these members out of work. There was a fractional improvement among the Nova Scotia members, unemployment declining from 2·3 to

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

2·2 per cent; as in April, New Brunswick members were reported as fully employed. In comparison with conditions in May, 1941, there was pronounced expansion in work available, in both Alberta and British Columbia. In Alberta the percentage of unemployed members stood at 9·3 in comparison with 28·9 per cent in May, 1941, while in British Columbia there was fractional unemployment only, as compared with nearly 10 per cent who were out of work, in May, a year ago. In New Brunswick union members were fully employed at both dates, while in Nova Scotia there was a slight decline.

Reports were tabulated from 9 unions of quarry workers having 4,298 members, of whom 207, or a percentage of 4·8, were unemployed in contrast with percentages of 5·9 in April and 32·4 in May, a year ago.

In the building and construction trades there were 222 reports tabulated. The combined membership was 31,433 persons, of whom 2,627, or a percentage of 8·4 were without work, in comparison with percentages of 12·5 in April and 10·0 in May, a year ago. The percentage of members unemployed among carpenters and joiners declined from 13·7 in April to 7·8 per cent in May, while substantial improvement, likewise, occurred for bricklayers, masons and plasterers and hod carriers and building labourers, although the unemployment percentage in the trades first named stood at 22·0; while among hod carriers and building labourers there was but 3·7 per cent reported as being without work. Although the membership is small and the change did not involve many workers, lathers and roofers indicated pronounced betterment, while a slight employment increase only was apparent among steam shovelmen. There was very little unemployment among painters, decorators and paperhangers and electrical workers; slightly higher employment levels were observed among these workers, while plumbers indicated a fractional improvement only. Among bridge and structural iron workers, the percentage of those without work was 5·6 which was identical with that shown in April. On the other hand, among granite and stone cutters the percentage of those out of work increased fractionally from 20·8 to 21·0. In comparison with the situation in May, 1941, hod carriers and building labourers were much better employed and heightened activity was in evidence, also, among carpenters and joiners. Although but few members were involved, the situation among granite and stonecutters was much improved, there having been over 40 per cent of these workers without employment in May, a year ago. On the contrary, a fractional contraction was observed among electrical workers; the percentage of unemployment among lathers increased substantially although, as this membership is small, not many workers were involved.

There were 875 returns received from unions in the transportation industries. The total membership was given as 79,901, of whom, 1,077, or a percentage of 1·3 were without work, in comparison with percentages of 1·5 in April and 2·6 in May, 1941. Steam railwaymen, whose membership embraced over 78 per cent of the entire group total, indicated a fractionally better situation; employment among these workers remained at a very high level. Further improvement was in evidence among navigation workers, the unemployment percentage standing at 4·5, compared with 7·4 per cent in April. Among street and electric railway employees and teamsters and chauffeurs there were but fractional changes; in the former group there was a very slight improvement while among teamsters and chauffeurs there was a fractional recession. In comparison with reports received in May, 1941, navigation workers recorded pronounced betterment and among steam railwaymen there was a slightly higher employment level. No change in the unemployment percentage was apparent among street and electric railway employees, while a fractional decrease in available work was in evidence among teamsters and chauffeurs.

Reports were tabulated from 10 unions of retail shop clerks. The total membership was 2,978. All of the members were fully employed in May, as in the preceding month and in May, a year ago.

Reports were received from 99 unions of civic employees, whose combined membership was 9,789 persons, of whom, 5, or a percentage of 0·1 were unemployed. This percentage was identical with that reported in April. The percentage of those who were out of work in May, a year ago, was 0·6.

From unions in the miscellaneous group of trades there were 160 returns received. The

total membership was 12,003, of whom 115, or a percentage of 1·0, were unemployed compared with 1·1 per cent in April, 1942, and 4·1 in May, 1941. Fractional employment increases were apparent among theatre and stage employees and stationary engineers and firemen. Among hotel and restaurant employees and unclassified workers the unemployment percentages remained unchanged; barbers reported a fractional recession. The unemployment percentages in all of these occupations were low, ranging from 0·1 per cent among unclassified workers to 2·5 per cent among theatre and stage employees. In comparison with returns tabulated in May, 1941, hotel and restaurant employees, whose returns recorded an unemployment percentage of 0·8 showed a pronounced employment increase over the May reports, of a year ago, when 5·3 per cent of these members were without work. Among theatre and stage employees, unclassified workers and stationary engineers and firemen the employment levels were substantially higher; a fractional increase in work was apparent for barbers.

Reports were tabulated from 4 unions of fishermen. This combined membership was 1,657, of whom, 100, or a percentage of 6·0 were unemployed, in comparison with 12·5 per cent in both the previous month and in May, 1941.

Returns were received from 2 unions of lumber workers and loggers. The total membership was 2,182. Of these, 85, or a percentage of 3·9 were without work compared with 3·7 per cent in the previous month and 3·8 per cent in May, a year ago.

Table I shows by provinces the average percentage of union members who were unemployed each year from 1931 to 1941, inclusive and also, the percentage of unemployment for May of each year from 1931 to 1940, inclusive, and for each month from May, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in Table I.

Building Permits Issued in Canada during May, 1942

Compiled by the Dominion Bureau of Statistics

The May report of building permits includes returns from 177 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 166 reported detailed operations. The remaining 11 advised that no permits had been issued during the month of May while 27 municipalities had failed to report at the close of June 12.

The total value of permits reported as issued in the month of May is $8,556,122. Revised values for the month of April include returns from 200 municipalities and aggregate $11,295,975. Reports were received from 56 of the 58 original municipalities and show a value of $6,513,162 for May. The corresponding revised value for April includes 58 returns and is $9,050,784, while the May, 1941, value was $12,704,074.

The total value of permits issued by all municipalities during the five elapsed months of the current year is $37,665,830. The value of the 58 municipalities for the same period is $29,261,369, while their corresponding value in 1941 was $39,925,772.

During the month of May new construction of all types amounted to 70·3 per cent of the total value, while the percentage of new residential construction was 55·7.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, May, 1942, summarizes the March-April employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at April 13, 1942 (exclusive of men numbering 26,000 who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 69,543. As compared with March 16, there was a decrease of 2,988 among men, but an increase of 5,094 among boys, the latter being mainly due to the registration of school leavers. Those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 3,281, a decrease of 886 as compared with March 16. Those registered as unemployed casual workers numbered 3,725, a decrease of 1,902 since March 16.

The corresponding figures for women and girls at April 13 were 47,505 wholly unemployed (exclusive of those, numbering 1,664, who had been classified by interviewing panels as unsuitable for normal full-time employment), 3,200 temporarily stopped, and 245 unemployed casual workers. Of the 47,505 wholly unemployed, 1,665 had been classified as unable for good cause to transfer to another area. As compared with March 16, the numbers wholly unemployed showed a decrease of 9,645 among women, but an increase of 2,941 among girls, the latter being mainly due to the registration of school leavers, those temporarily stopped showed a decrease of 869, and unemployed casual workers showed a decrease of 8.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for April 13 was 79,663, as com-

pared with 94,368 at March 16, and 268,600 at April 21, 1941.

United States

According to a press release issued on June 30 by Miss Frances Perkins, United States Secretary of Labor, total civil non-agricultural employment increased by 327,000 from mid-April to mid-May. The May total was 41,201,000, a new all-time high. It exceeded the previous peak (41,073,000 in December, 1941) by 128,000 and the level of May, 1941 by 2,299,000.

A substantial portion of the increase from April to May was in manufacturing industries where a contraseasonal gain of 76,000 workers reflected continued expansion in the war production industries. Contract construction showed a gain of 92,000, the May level exceeding all previous months since the fall of 1929. Increased employment on government projects accounted for this substantial gain; private construction showed a small decrease over the month interval. Federal, State and local government employment increased by 86,000 and there were increases of 40,000 in the transportation and public utilities group, and 38,000 in the group of finance, service, and miscellaneous industries. Employment in the group of mining industries showed a small gain, while wholesale and retail trade establishments combined reported a slight loss. Government restrictions affecting the sale of such items as automobiles, tires, electrical appliances, gasoline, lumber and plumbing and heating equipment accounted for the decrease in various lines of trade.

The principal factor in the expansion of nearly 2,300,000 in non-agricultural employment over the year interval was the increase of 1,135,000 in manufacturing industries. Federal, State and local government services, contract construction, and transportation and public utilities also showed large gains, while a smaller increase was reported in the finance, service and miscellaneous group. In the remaining two major groups, trade and mining, there were declines of 80,000 and 7,000 respectively. A number of lines of both wholesale and retail trade have been seriously affected by the war program, particularly automotive, while the sharp curtailment in oil well drilling accounts primarily for the decrease in the mining group over the year interval.

The rise of 0·7 per cent in factory employment between April and May was in contrast to a seasonally expected decline of 0·5 per cent, while the corresponding increase in weekly payrolls (3·2 per cent or $11,300,000) compared with a typical rise of only 0·2 per cent or about $700,000 for this time of year. The durable goods group of manufacturing industries, in which war production is chiefly concentrated, reported an employment increase of 1·7 per cent (102,100) while the non-durable goods group showed a decrease of 0·6 per cent (27,300).

Shortages of materials and lay-offs in plants converting their facilities to war production continued to cause employment reductions in many durable and non-durable industries. Among them were cast-iron pipe, cutlery, hardware, plumbers' supplies, wirework, steam and hot-water heating apparatus and steam fittings, tin cans and other tinwear, radios, typewriters, jewellery, lighting equipment, carpets and rugs and rubber goods. Gains in industries geared to the war effort, however, more than offset these declines. For the first time since last November automobile plants reported an employment increase, (5·6 per cent or 18,900 workers) indicating a stepping-up of war production in converted plants. Other strategic war industries continued to show sharp employment gains, notably shipbuilding, aircraft, engines, machine tools, machine-tool accessories, electrical machinery, foundries and machine shops, ammunition, and firearms.

Among the non durable goods industries, seasonal increases were shown by woollen and worsted goods mills, bakeries, meat packing plants, and plants manufacturing beverages, butter, ice cream and beet sugar. The canning and preserving industry showed a contra-seasonal gain of 2·1 per cent. Seasonal declines were reported by establishments manufacturing fertilizers; cottonseed-oil, cake, and meal; confectionery; and millinery.

The May indexes of factory employment (137·0) and payrolls (192·6), based on 1923-25 as 100, were at the highest levels on record, the gains since May of last year being 9·7 and 33·7 per cent, respectively. The payroll increase in all manufacturing over the year was nearly four times as large as the employment expansion due largely to increased working hours, overtime premiums, and wage-rate increases.

Wage-rate increases averaging 7·9 per cent and affecting 207,000 factory wage earners were reported by 691 plants out of a reporting sample of approximately 30,000 plants with about 6,000,000 workers. The largest number of workers affected were in the cotton goods, men's clothing, machine tools, aircraft, boot and shoe, and paper and pulp industries. Scattered wage-rate increases were reported among the non-manufacturing industries surveyed, the public utilities group reporting the largest numbers of workers affected.

Employment in anthracite mining showed a contraseasonal increase of 1·0 per cent from April to May, while bituminous coal mines reported a less-than-seasonal decline of 0·3 per cent. These changes were coupled with payroll increases of 14·5 and 3·4 per cent respectively, reflecting increased production. Quarries and non-metallic mines expanded their forces by 2·8 per cent, about half the average May increase of the preceding 13 years. While the small employment increase of 0·1 per cent in metal mines raised the index to 82·0 per cent of the 1929 average, the highest May level since 1930, crude petroleum producing firms reported 0·4 per cent fewer production employees than in the preceding month.

The continuing demand for public transportation facilities was reflected by the increase of 1·6 per cent in the number of workers employed by street railways and busses, this being the fourth consecutive monthly gain, and with but one exception the largest percentage increase in any month during the last 14 years. Electric light and power companies reported a contraseasonal employment drop of 1·0 per cent while telephone and telegraph offices increased their forces slightly. Among the service industries, increases of a seasonal character were shown by laundries (3·2 per cent), dyeing and cleaning establishments (5·4 per cent) hotels (0·4 per cent). Brokerage and insurance firms reported decreases of 3·9 and 0·8 per cent respectively.

The drop of 1·7 per cent in wholesale trade employment was greater than usual for May due largely to contraseasonal decreases in many lines as war conditions and resulting government restrictions affected the sale of such items as automobiles, tires, petroleum and gasoline, electrical appliances, radios, plumbing and heating equipment, furniture and house furnishings, and paper products. These factors also affected similar lines of retail trade. Employment in retail food, general merchandise, and fuel and ice establishments, however, increased over the month interval and the net change for retail trade as a whole was a decrease of only 0·1 per cent.

All Federally-financed construction required 1,564,000 workers during the month ending May 15, constituting an increase over April of 193,000 or 14 per cent. Pay rolls, amounting to $281,549,000, increased 18 per cent. Construction workers hired directly by the Federal Government numbered 239,000 or 15 per cent of the total.

War construction, not including housing, employed 196,000 additional workers during May, reaching a total of 1,418,000 persons and constituting 91 per cent of the total number employed on Federally-financed construction. Expansion during May was concentrated mainly on the construction of ships, non-residential buildings, and streets and roads.

Employment on public housing projects showed a decline during the month ending May 15 of 8,900 and over the past year of 66,300.

Employment in the Federal executive service increased 78,700 persons during May: 7,400 inside the District of Columbia and 71,300 outside. Over the past year employment inside the District has increased 45 per cent and outside the District 62 per cent. During May total employment in the Federal executive service was 2,091,000 and pay rolls were $331,645,000.

Contraction of the work-relief programs continued during May. WPA personnel was cut 80,700 (9 per cent), personnel on the NYA student work program was cut 21,400 and on the out-of-school work program 24,000 (10 per cent for the 2 programs). The 12,300 personnel decline for the CCC was distributed among the various groups as follows: enrollees, 11,400; nurses, 13; educational advisors, 81; and supervisory and technical, 834. All work-relief programs have dropped a total of 1,356,000 names from the rolls in the past year.

Assisted Travel Facilities for Transferred Workers in Great Britain

The Minister of Labour and National Service has decided, in consultation with the Ministry of War Transport, to introduce a scheme of assisted travel for transferred workers who wish to visit their homes, according to the British *Ministry of Labour Gazette*. The scheme will apply to workers who have been transferred to war work by the Ministry of Labour and National Service since June 1, 1940, and for whom no similar provision is available under any industrial agreement or practice. The assistance will take the form of the provision, not more than twice a year, of a warrant entitling the worker to the issue of a railway ticket at a cost to the worker of 7s. 6d. in cases where the return fare would exceed the amount. Forms of application for assistance under the scheme may be obtained from the nearest Local Office of the Ministry of Labour and National Service. Warrants will not be issued in respect of journeys commenced before May 18, 1942.

In view of the special need to restrict railway travel during the winter months, the scheme can be operated only during the summer months, and the facilities provided will not be available this year after September 15.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

PRIOR to the establishment of Wartime Wage Control under P.C. 8253, inspection and enforcement of fair wages and labour conditions on Government contracts was provided under P.C. 5522 of July 22, 1941 (LABOUR GAZETTE, August, 1941, page 869), which empowered the Minister of Labour "to appoint any provincial official or any other person authorized to inspect labour conditions pursuant to the law of any province as his duly authorized representative for the enforcement of the fair wages and labour conditions on Dominion contracts." It also established a penalty for any person who obstructs such a representative in the pursuit of his duties.

P.C. 1774 of March 9, 1942, replaces the foregoing Order and gives recognition to the jurisdiction of the National War Labour Board which was charged in P.C. 8253 of October 24, 1941, with the administration of the fair wage and labour conditions on Government contracts, as well as the administration of the wages and cost-of-living bonus provisions of that Order. P.C. 1774 also contemplates the extension of the appointment of representatives of the Minister of Labour to include provincial wage commissions, parity committees, or other agencies whose inspection function would usefully serve the National or a Regional War Labour Board with respect to the enforcement of those matters with which such Boards are charged.

Accordingly the National War Labour Board is now furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wage Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Orders in Council of April 9, 1924, and of December 31, 1934. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On May 30, 1941, an Order in Council, P.C. 3884, was passed rescinding the schedule of minimum wage rates set out in the "B" conditions which had been in effect since December, 1934, and establishing increased rates of 35 cents and 25 cents respectively for male and female workers over eighteen years of age. It also made provision for a system of permits to employ beginners and handicapped workers at sub-standard rates, and provided penalties for non-compliance with the prescribed rates.

On October 4, 1941, P.C. 3884 was revoked by the passage of Order in Council P.C. 7679 and minimum rates were prescribed for all employees of Government contractors and subcontractors. (The full text of this Order in Council appears at pages 1226 and 1237 of the LABOUR GAZETTE for October.)

The four major changes made by the new Order are: (1) the application of the minimum rates to *all* employees of contractors and subcontractors throughout an establishment of which any part may be engaged on Government orders, and not only as previously to those employees actually engaged on Government work; (2) the addition of a new minimum wage rate of 20 cents an hour for employees under 18 years of age whose rates previously had been set by provincial regulation, (3) the authorization of special beginners' rates; and (4) the exemption from the necessity of obtaining beginners' permits unless the number of beginners exceeds a quota of 20 per cent of the total number of employees in any establishment.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were suspended in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. This clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did

not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance, or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreements with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as in the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of the opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working

hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

Schedules Prepared and Contracts Awarded During June

During the month of June the National War Labour Board prepared, on request, 137 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into recently by the various Government departments (other than the Department of Munitions and Supply) appear in the accompanying table:—

GROUP "A" CONTRACTS

(1) *Works of Construction, Remodelling, Repair or Demolition*

NOTE.—For the contracts in the following table marked "A1" a schedule of wage rates and other labour conditions was provided. For those contracts marked "A2" no wage schedule was provided but a General Clause was furnished calling for the payment of fair wages and the observance of the usual working hours.

Department	Description of Contract	Location	Name of Contractor	Date of Contract	Amount of Contract	Labour Conditions
Public Works..	Construction of substation, boiler house, etc., Naval Base.	Shelburne, N.S.	James N. Kenney, Halifax, N.S.	May 28, 1942	$ 97,116 00 (approx.)	"A1"—Wage Schedule.
Public Works..	Construction of wharf at old Ordnance Property.	Halifax, N.S....	Diamond Construction Co., Ltd., Fredericton, N.B.	June 9, 1942	68,528 70 (approx.)	"A1"—Wage Schedule.
Public Works..	Construction of temporary building in Court B, National Research Building	Ottawa, Ont....	Patterson Construction Co., Ottawa.	June 19, 1942	11,200 00	"A1"—Wage Schedule.
Public Works..	Construction of extension to public wharf.	Meteghan, N.S.	J. C. Gaudet & J. J. L. Gaudet, Little Brook, N.S.	June 16, 1942	Unit prices—Approx. expend. 15,499 00	"A1"—Wage Schedule.
Public Works..	Construction of a Recreation and Chapel Building, Christie Street Hospital.	Toronto, Ont...	Redfern Construction Company, Ltd., Toronto, Ont.	June 18, 1942	23,970 00 and unit prices	"A1"—Wage Schedule.
Public Works..	Dredging at entrance to harbour.	Port Dover, Ont.	Chatham Dredging and General Contracting Co., Ltd., Chatham, Ont.	June 2, 1942	7,290 00 (approx.)	"A2"—General Clause.
Public Works..	Redredging Lake approach to Eastern Channel.	Toronto, Ont..	McNamara Construction Co. Ltd., Toronto, Ont.	June 18, 1942	16,380 00 (approx.)	"A2"—General Clause.
Public Works..	Dredging.....	Beloeil Station, Richelieu River, P.Q.	Southern Working, Limited, Montreal, P.Q.	June 20, 1942	15,424 00 (approx.)	"A2"—General Clause.
Transport.....	Additional Airport Development.	Malton, Ont.....	Godson Contracting Company, Ltd., Toronto, Ont.	June 10, 1942	79,947 90	"A1"—Wage Schedule.
Transport.....	Additional development of Hagersville Aerodrome.	Hagersville, Ont.	Dufferin Paving & Crushed Stone, Ltd., Toronto, Ont.	June 12, 1942	75,449 50	"A1"—Wage Schedule.
Transport.....	Additional development of Cayuga Aerodrome.	Cayuga, Ont....	Dufferin Paving & Crushed Stone, Ltd., Toronto, Ont.	June 17, 1942	35,185 00	"A1"—Wage Schedule.
Transport.....	Development of Carp Aerodrome.	Carp, Ont.....	Dibblee Construction Co., Ltd., Ottawa, Ont.	June 27, 1942	200,317 00	"A1"—Wage Schedule.

GROUP "B" CONTRACTS

Manufacture and Supply of Equipment, Supplies, Interior Fittings, etc.

NOTE.—Each of the contracts noted under this heading contains the "B" Labour Conditions referred to in the introduction to this article.

ROYAL CANADIAN MOUNTED POLICE

Nature of Contract	Contractor
Felt Boots	The Great West Felt Co., Ltd., Elmira, Ont.
Breeches	The Workman Uniform Co., Ltd., Montreal, P.Q.
"Varsity" Slickers	Tower Canadian, Limited, Toronto, 2, Ont.

POST OFFICE DEPARTMENT

Nature of Contract	Contractor
Metal dating stamps and type cancellers, etc.	Pritchard-Andrews Company of Ottawa, Ltd., Ottawa, Ont.
Rubber stamps, daters, etc.	Pritchard-Andrews Company of Ottawa, Ltd., Ottawa, Ont.
Letter Carriers' Uniforms	Uniform Cap Manufacturing Company, Ottawa, Ont.
	Kaufman Rubber Company, Ltd., Kitchener, Ont.
	Tayside Textiles, Limited, Perth, Ont.
	Barrington Rubber Co., Ltd., Oakville, Ont.
	J. E. Wiegand & Co., Ltd., Kitchener, Ont.
	Jay Wolfe, Inc., Montreal, P.Q.
	Uniform Company Reg'd., Quebec, P.Q.
Mail Bag Fittings	United-Carr Fastener Co. of Canada, Hamilton, Ont.
	Bell Thread Co., Ltd., Hamilton, Ont.
	Hamilton Cotton Co., Ltd., Hamilton, Ont.
Letter Pouches and Mail Bags	Hugh Carson Co., Ltd., Ottawa, Ont.
Letter Boxes	Barry Sheet Metal Co., Ltd., Edmonton, Alta.

ANNUAL CENSUS OF MANUFACTURING AND CERTAIN OTHER INDUSTRIES IN CANADA, 1940

Statistics Respecting Employees, Wages, Etc.

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, railways, etc., and general manufacturing in Canada. Preliminary figures for all manufacturing industries for the year 1940 have been issued and the accompanying tables give the figures in some detail.

The first table contains summary figures for all the manufacturing industries for 1930, 1933, 1937, and for 1939 and 1940, showing the number of establishments, capital invested, the number of employees on salaries and wages together with the amount of such salaries and wages, the cost of materials entering into manufactures and the value of the finished products. Comparing 1940 with 1939, there were considerable increases in the totals of wages paid, cost of materials, value of products, and in the value added by manufacture.

The second table shows the number of employees on salaries and wages with the salaries and wages paid as well as the number of establishments for 1940, by provinces and by groups of industries and for each of the important industries in each group.

The third table gives the figures as to the number of employees and as to salaries and wages paid in certain industries for which figures are collected anually. There were increases in the number of employees in all of these industries except in fishing, coal mining and in mining other than metal and coal. In manufacturing the increase in numbers of employees was approximately 15 per cent.

Statistics for 1939, comparable to those contained in the present article, appeared in the LABOUR GAZETTE, September, 1941, pp. 1116-1119. Figures from the Decennial Census of 1931, Bulletin XXXI, showing numbers of gainfully employed persons in all industries were given in the LABOUR GAZETTE, August, 1933, pages 819-821, also figures from Bulletin XXXIII, as to numbers of wage earners, weeks employed and average earnings, were given in the LABOUR GAZETTE, November, 1933, pages 1094-1095.

TABLE I.—MANUFACTURING INDUSTRIES IN CANADA, PRINCIPAL STATISTICS, 1930, 1933, 1937 AND 1939–1940

Items	1930(1)	1933	1937	1939	1940	Change per cent in 1940 from 1939
Establishments.....No.	22,618	23,780	24,834	24,805	25,513	+ 2·9
Capital invested.....$	4,041,030,475	3,279,259,838	3,465,227,831	3,647,024,449	4,095,716,836	+12·3
Employees on salary.....No.	84,711	86,636	115,827	124,772	135,760	+ 8·8
Salaries.....$	169,992,216	139,317,946	195,983,475	217,839,334	241,599,761	+10·9
Average salary.....$	2,007	1,608	1,692	1,746	1,777	+ 1·8
Employees on wages.....No.	529,985	382,022	544,624	533,342	626,484	+17·5
Wages.....$	527,563,162	296,929,878	525,743,562	519,971,819	679,273,104	+30·6
Average wage.....$	995	777	965	975	1,085	+11·3
Cost of materials.....$	1,522,737,125	967,788,928	2,006,926,787	1,836,159,375	2,449,721,903	+33·4
Value of production.....$	3,280,236,603	1,954,075,785	3,625,459,500	3,474,783,528	4,529,173,316	+30·3
Value added by manufacture.....$	1,522,737,125	919,671,181	1,508,924,867	1,531,051,901	1,942,471,238	+26·9

(1) A change in the method of computing the number of wage-earners in the years 1925 to 1930 increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

TABLE II.—NUMBERS OF EMPLOYEES, SALARIES AND WAGES PAID IN MANUFACTURING INDUSTRIES IN CANADA, 1940

—	Number of establishments	Salaried employees			Wage-earners		
		Male	Female	Salaries	Male	Female	Wages
(a) PROVINCES							
CANADA	**25,513**	**104,267**	**31,493**	**241,599,761**	**491,439**	**135,045**	**679,273,104**
Prince Edward Island	219	235	58	223,136	551	213	422,664

Wages and salaries $	8,914,305	8,010,687	6,232,758	7,311,007	7,222,887	7,412,300	7,607,362

(a) See note (1), Table I.
(b) Including about half of the express employees which are also shown under Express below.
(c) Not including operators paid on commission.
(d) Full time employees only.
* The figures for mining, etc., include non-ferrous smelting and refining, clay products, cement, lime and stone (monumental and ornamental), which are also shown as sub-groups under Manufacturing.

WAGES OF EMPLOYEES ON FARMS IN CANADA, 1929, 1933 AND 1937 TO 1941

THE Dominion Bureau of Statistics has obtained each year since 1914 from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured were published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year until 1941 when they appeared in the *Quarterly Bulletin of Agricultural Statistics* for January-March. Since 1940 the figures have been obtained in January, May and August including rates per day as well as per month and per year. (These months indicate the wages at the beginning of each hiring season).

Tables of these figures have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the LABOUR GAZETTE for January, 1925 to 1938, inclusive, and March, 1939, and 1940, the first of these giving figures back to 1914. The accompanying table includes figures taken from the issue of the *Quarterly Bulletin* for January-March, 1941, and from periodical bulletins on Farm Wages.

The table on wages per year is for 1929, when farm wages in Canada were at about the general level from 1921 to 1929; for 1933 when these wages were down to about the lowest point since 1914; and for the last five years. These figures reveal that wages of employees on farms in Canada fell approximately fifty per cent from 1929 to 1933 and thereafter tended to increase gradually until 1941 when the increase was substantial though still somewhat below the figures for 1929.

AVERAGE WAGES PER YEAR OF FARM HELP, 1929–1941

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Logging

LADYSMITH, B.C.—A CERTAIN LOGGING COMPANY AND THEIR EMPLOYEES.

Agreement in effect from March, 1942, to April 30, 1943, and thereafter subject to 60 days' notice. A committee of employees to be elected to discuss and bargain with the Company on matters of mutual interest. The company not to discriminate against any employees. Hours of work to be in accordance with provincial laws. The wage scale in effect at the time the agreement made is approved by both parties and the company agrees to maintain wages and working conditions equal to the standard in the logging industry of British Columbia. The principle of seniority is recognized. The company will grant leave of absence to employees entering the armed services and to employees suffering from injury or illness.

Manufacturing: Rubber Products

BOWMANVILLE, ONTARIO.—THE GOODYEAR TIRE AND RUBBER COMPANY LTD. AND THEIR HOURLY RATED EMPLOYEES, AS REPRESENTED BY THE EMPLOYEES' GENERAL COMMITTEE (BOWMANVILLE PLANT).

Agreement in effect from May 1, 1942 to April 30, 1943, and thereafter from year to year, subject to notice. This agreement replaces the one previously in effect which was summarized in the LABOUR GAZETTE, March, 1941, page 330.

Hours: employees on 8 hour shifts to work 8 hours Monday to Friday inclusive, 5 on Saturdays, a 45-hour week; employees on 8½ hour shifts to work 8½ hours for 6 days, a 51 hour week; employees on 9 hour shifts, to work 9 hours Monday to Friday inclusive, 5 hours on Saturday, a 50 hour week; employees on 10 hour shifts, (in machine shop only) to work 10 hour shifts (nights) Monday to Friday, a 50 hour week; shifts to rotate each week. Overtime: time and one-half to all hourly and piece-work employees for time worked in excess of their regular shift hours and for all work from Saturday noon to Sunday midnight unless part of standard shift hours, in which case another day to be taken as Sunday. Holidays: all hourly and piece-work employees to be paid for the seven statutory holidays, and, if requested to work on such days, to be paid for such day in addition to the holiday pay. No mention is made in this agreement of a vacation. Wages to be in conformity with the 1941 Order in Council P.C. 8253 of the federal government and the cost-of-living bonus already being paid is to be continued, with adjustments in accordance with the federal government Orders in Council. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Fur and Leather Products

WHITBY, ONTARIO.—A CERTAIN TANNERY AND THE INTERNATIONAL FUR AND LEATHER WORKERS' UNION, LOCAL 218.

Agreement in effect from May 31, 1942 to May 31, 1943, and thereafter from year to year, subject to notice. The Company recognizes the union as the sole bargaining agency. Hours: 50 per week. Overtime at time and one-half to be paid for all work over 9 hours in any one day and 50 hours in any one week. Wages: minimum rate of 35 cents per hour for adult workers during first three months' employment and 40 cents thereafter; for employees under 21 years of age, a minimum of 30 cents for first three months and 35 cents thereafter. The company to pay a cost-of-living bonus as provided in the 1941 Order in Council P.C. 8253 of the federal government, and any amendments thereto. Provision is made for seniority rights, three days' vacation with pay and for the settlement of grievances.

OSHAWA, ONTARIO.—A CERTAIN TANNERY AND THE INTERNATIONAL FUR AND LEATHER WORKERS' UNION, LOCAL 205.

Agreement in effect from April 11, 1942, to April 11, 1943, and thereafter from year to year, subject to notice. No discrimination to be shown employees on account of membership or non-membership in the union. Hours: 9 per day, 5 on Saturdays, a 50 hour week for day work; 10 per night, 5 nights a week, a 50 hour week. Overtime is payable at time and one-half. Wage rates to remain as in effect, with a cost-of-living bonus in accordance with the provisions of the applicable government Order in Council. The minimum hourly wage rate for adults is 40 cents, to be increased after three months to 45 cents; for male workers under 21 years of age, 30 cents per hour, to be increased after three months to 35 cents. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Pulp, Paper and Paper Products

BATHURST, N.B.—BATHURST POWER AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 396), THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 120) AND OTHER UNIONS.

The agreement which came into effect July 1, 1941, and was summarized in the LABOUR GAZETTE, August, 1941, page 1005, was amended February 12, 1942, to change the cost-of-living provisions. The amendment provides that, effective for the payroll period beginning November 16, 1941, and for subsequent payroll periods, cost-of-living bonuses will be paid under the regulations established in the 1941 Order in Council P.C. 8253 and amendments.

Manufacturing: Other Wood Products

CALGARY, ALBERTA.—A CERTAIN WOOD PRESERVING COMPANY AND THEIR EMPLOYEES.

Agreement in effect from September 5, 1941, to August 31, 1942, and thereafter subject to two months' notice. The employer recognizes the right of the employees to bargain collectively through their elected representatives. Hours: 44 per week except for boiler plant and treating engineers, foremen, etc., who work a 48 hour week, and watchmen, a 54 hour week. Overtime and all work on statutory holidays is payable at time and one half. Minimum wage rate is 45 cents per hour except for watchmen and temporary casual labour whose minimum is 42 cents. The wage schedule is made retroactive to July 1, 1941 and includes the following hourly rates: assistant treating engineers 60 cents, shift engineers 68 cents, machine operators 50 cents, derrick operators 74 cents, blacksmiths 63 cents, piece rates are also provided for. A cost-of-living bonus is provided for. There is provision also for seniority rights and for the settlement of disputes.

Manufacturing: Metal Products

OSHAWA, ONTARIO.—A CERTAIN MANUFACTURER OF PIPE FITTINGS, ETC. AND THE STEEL WORKERS ORGANIZING COMMITTEE, (UNITED STEEL WORKERS OF AMERICA), LOCAL 1817.

Agreement to be in effect from May 1, 1942, to April 30, 1943. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1941, page 697, with certain changes:

Wages: the scale of wages as at January, 1942 to remain in effect; the minimum hourly hiring rate for employees to learn moulding to be 50 cents; the minimum hourly hiring rates for other newly hired employees are 45 cents for male adult workers, 33 cents for boys under 18, 35 cents for boys from 18 to 21 years; boys placed on adult work to receive adult rate; piece work prices for moulders and adult core makers to be based on a minimum of 66·8 cents an hour for the worker of average skill and ability. The cost-of-living bonus to continue to be paid by the company as at present and only subject to change in accordance with the federal government Order in Council P.C. 8253, and any amendments thereto.

OSHAWA, ONTARIO.—A CERTAIN MANUFACTURER OF IRON CASTINGS AND THE STEEL WORKERS ORGANIZING COMMITTEE (UNITED STEELWORKERS OF AMERICA), LOCAL 1817.

Agreement in effect from April 28, 1942, to April 30, 1943. This agreement is similar to the agreement between this same company and its employees which was summarized in the LABOUR GAZETTE, June, 1941, page 697, with the exception of the cost-of-living provisions which are changed to provide that the bonus continue to be paid by the company as at the time the agreement was made, subject to change in accordance with the federal government 1941 Order in Council P.C. 8253 and amendments thereto. Certain details are added with reference to seniority provisions.

WINDSOR, ONTARIO.—FORD MOTOR COMPANY OF CANADA, LTD. AND UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 200.

Agreement in effect from January 15, 1942 to December 31, 1942, and thereafter from year to year, subject to notice. The company recognizes the union as the exclusive bargaining agency for employees who are union members and are not supervisors, clerical workers, chemists, etc. Employees are free to join or not to join any union or association, and no discrimination to be shown employees on account of union membership or no-membership. The company will recognize stewards, plant committees and a negotiating committee appointed by the union. Provision is made for seniority rights and for the settlement of grievances. At the time of the execution of this agreement, the company's regular work week was five 8-hour days, a 40 hour week, with time and one half for all overtime.

WINNIPEG, MANITOBA.—A CERTAIN FOUNDRY AND THE INTERNATIONAL MOULDERS' UNION.

Agreement in effect from August 1, 1941, to August 1, 1942, and thereafter from year to year, subject to notice. No discrimination against any employee for being or not being a union member. Hours: 9 per day, 5 on Saturdays, a 45 hour week. Overtime: time and one half; double time for work on Sundays and eight specified holidays. Hourly wage rates for moulders are 65 cents and 75 cents with one man at 54 cents and three others at 59 cents; for coremakers 59, 65 and 70 cents. Apprentices to serve four years and to be paid from 30 to 42½ cents per hour. Provision is made for seniority rights and for the settlement of disputes.

VANCOUVER, B.C.—A MANUFACTURER OF BOILERS, ENGINES AND MINING MACHINERY AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 692.

Agreement in effect from September 8, 1941 for the duration of the war and wartime contracts. Hours: 8 per day, 44 per week; if a second shift employed, they shall work 7½ hours and be paid for 8 hours; 3¾ hours on Saturday with pay for 4 hours; if a third shift employed, 7 hours' work for 8 hours' pay, 3½ hours' of work for 4 hours' pay on Saturday. Overtime is payable at time and one half for first 4 hours and double time thereafter; double time for work on Sundays and eight specified holidays. Minimum hourly wage rates: machinists and fitters 90 cents, specialists 65 cents, helpers and operators 50 to 60 cents, labourers 50 cents. A cost-of-living bonus of 4 cents per hour was made payable from June 1, 1941, with provision for its variation with changes in the cost-of-living in accordance with the federal government 1940 Order in Council P.C. 7440 and amendments. Provision is made for the settlement of disputes.

VICTORIA, B.C.—CERTAIN FOUNDRIES AND THE INTERNATIONAL MOULDERS AND FOUNDRY WORKERS UNION, LOCAL 144.

Agreement in effect from September 1, 1941, for the duration of the war and wartime contracts. The company recognizes a union committee. No discrimination on account of union activity. Hours: 8 per day, a 44-hour week; in case of a second and third shift, 7½ hours' work for 8 hours' pay. Overtime at time and one half for first four hours and double time thereafter; double time for work on Sundays and eight specified holidays. Minimum hourly wage rates; moulders and coremakers 90 cents, cupola tender 72½ cents, chippers and grinders 65 cents, helpers 60 cents. Wage rates to be adjusted quarterly with changes in the cost-of-living. Disputes are to be settled by by the company with the shop committee.

Services: Business and Personal

MOOSE JAW, SASKATCHEWAN.—A CERTAIN LAUNDRY AND THE LAUNDRY WORKERS' UNION, LOCAL NO. 2.

Agreement reached following strike reported on page....of this issue. Agreement to be in effect from July 3, 1942, to July 2, 1943, and thereafter from year to year, subject to notice.

The Company recognizes the union as the collective bargaining agency for its employees who belong to the union. Hours: 8 per day, 48 per week. Overtime is payable at time and one quarter. Classification of jobs, rates of pay and cost-of-living bonus to be the subject of negotiation between the company and the union, subject to submission to the Regional War Labour Board, as provided in Order in Council P.C. 8253 and amendments. Employees to be paid for seven statutory holidays, and if required to work on such days, to be paid regular rate in addition. One week's vacation with pay annually after 18 months' service; two weeks after five years' service. Provision is made for seniority rights and for the settlement of disputes.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the LABOUR GAZETTE, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the extension of one new agreement and the amendment of eleven other agreements, as summarized below. A request for the extension of a new agreement for building trades at Sherbrooke was published in the *Quebec Official Gazette*, of June 27. Requests for amendment of the following agreements were published in the *Quebec Official Gazette*, as follows: barbers and hairdressers at St. Hyacinthe, the building materials industry throughout the province and barbers at Hull, in the issue of June 6; barbers and hairdressers at Joliette, and barbers and hairdressers at Three Rivers, in the issue of June 20; men's and boys' clothing industry throughout the province and building trades at Hull, in the issue of June 27.

In addition, Orders in Council were published in the *Quebec Official Gazette* during June, approving or amending the constitution and by-laws of three parity committees, and others approving the levying of assessments or amending previous Orders in Council in this connection by eight parity committees.

Manufacturing: Printing and Publishing

PRINTING TRADES, MONTREAL

An Order in Council, dated June 17, and published in the *Quebec Official Gazette,* June 20, extends the term of this agreement (LABOUR GAZETTE, June, 1941, page 704; April, 1938, page 452; June, 1936, page 546; December, 1936, page 1181; October, 1939, page 1065; February, 1941, page 183; April, 1941, page 473; December, 1941, page 1572; March, 1942, page 353) to September 30, 1942. (Through an Order in Council, dated December 18, and published in the *Quebec Official Gazette,* December 27, 1941, this agreement had already been extended for a period of 90 days from December 31, 1941.)

Manufacturing: Miscellaneous Wood Products

FURNITURE INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated June 11, and published in the *Quebec Official Gazette,* June 13, amends the previous Orders in Council (LABOUR GAZETTE, December, 1940, page 1311, November, 1941, page 1424 and December, 1941, page 1572) by providing for the payment of a cost-of-living bonus in accordance with federal government 1941 Orders in Council 8253 and 9514.

Manufacturing: Non-Metallic Minerals, Chemicals, Etc.

PAINT MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated June 17 and published in the *Quebec Official Gazette,* June 20, makes obligatory the terms of a new agreement between the Quebec Section of the Canadian Paint, Oil and Varnish Association and L'Association des employés de l'industrie de la peinture (The Association of Employees of the Paint Industry). The agreement is be in effect from June 20, 1942, for the duration of the war and 90 days after the cessation of hostilities, and thereafter from year to year, subject to notice. It applies to the entire province of Quebec, and replaces the previous agreement (LABOUR GAZETTE, March, 1940).

Hours: 48 per week except for employees on continuous operations who work 56 hours. Overtime is payable for all work over 9 hours in any one day or 48 hours in any week except employees on continuous operations who are paid overtime for work over 56 hours in a week; overtime rate is time and one quarter.

Minimum hourly wage rates: in paint and lacquer factory—labourers, mixers, helpers, millmen's helpers, fillers and general helpers, 40 cents; mixers and millmen 45 cents; shaders 47½ cents during the first two years and 52½ cents thereafter; charge hands 52½ cents. In varnish factory—labourers, fillers and general helpers 40 cents; kettlemen 52½ cents; varnish makers 67½ cents; charge hands 52½ cents. In white lead and dry colour factory—labourers 40 cents; grinders 42½ cents; pressmen 45 cents; colour strikers 52½ cents; charge hands 57½ cents. In receiving, packing and shipping department—general helpers 40 cents; charge hands 47½ cents; shipping clerks and stock keepers $21 per week; watchmen, stationary enginemen, firemen, watchmen and timekeepers $21 per week; coopers and mill dressers 52½ cents; maintenance men, including carpenters, electricians, plumbers, machinists, blacksmith, etc., 57½ cents. For overprinting labels and multigraphing—male employees 30 cents if under 18 years of age, 40 cents if over 18 years. For apprentices—30 cents if under 20 years of age, for one year only. For female employees in all factory departments—25 cents per hour. In linseed oil department—labourers 40 cents; hydraulic press or expeller men 42½ cents; maintenance men 57½ cents. (These rates are in most cases 2½ cents per hour higher than in the previous agreement.)

Vacation: one week with pay for those with one year's service, with one extra day for each year's service of over five years, with a maximum of two weeks' vacation.

Disputes are to be referred to the conciliation officers appointed by the employees in each plant, and later, if not settled, to the joint committee.

Transportation and Public Utilities: Water Transportation

LONGSHOREMEN (INLAND AND COASTAL NAVIGATION), MONTREAL

An Order in Council, dated May 29, and published in the *Quebec Official Gazette,* June 6, amends the previous Order in Council for these workers (LABOUR GAZETTE, June, 1939, page 629; February, 1940, page 173; April, page 391; June, page 610; February, 1941, page 184; April, page 473; June, page 705; July, page 854; August, page 1013; September, page 1162; November, page 1425; February, 1942, page 234; March, page 353) by extending the term of the agreement to June 30, 1942.

Trade

GARAGE AND SERVICE STATION EMPLOYEES, MONTREAL

See below under "Service Custom and Repair."

Service: Public Administration

MUNICIPAL EMPLOYEES (INSIDE SERVICES), QUEBEC

An Order in Council, dated June 17, and published in the *Quebec Official Gazette,* June 20, amends the previous Orders in Council governing permanent employees (LABOUR GAZETTE, August, 1940, page 868 and July, 1941, page 854) by making changes in the classification and salaries of a few employees.

FIREFIGHTERS, QUEBEC

An Order in Council, dated June 17, and published in the *Quebec Official Gazette,* June 20, amends the previous Orders in Council for firefighters at Quebec (LABOUR GAZETTE, August, 1940, page 869, and July, 1941, page 854). Cadets are to become firemen at $21 per week on the first day of May following the date

of their employment as cadets; wage rates for assistant secretary of the department $32 per week; chimney sweepers and prevention captain $32 per week. The following are new classes: telephone operators $1200 to $1,500 per year, electrician $1,300 to $1,600 per year, telegraph operators $1,500 to $1,800 per year.

POLICE DEPARTMENT EMPLOYEES, QUEBEC

An Order in Council, dated June 17, and published in the *Quebec Official Gazette*, June 20, amends the previous Orders in Council for these employees (LABOUR GAZETTE, August, 1940, page 869, and July, 1941, page 854). Cadets are to become constables at $21 per week on the first day of May following the date of their employment as cadets. The following are new classes; radio operator $30 per week, painter—letterer $30, quarter master $35; employees of photography and finger printing department $1,500 to $1,800 per year; radio technicians $1,800 to $2,200.

MUNICIPAL EMPLOYEES (OUTSIDE SERVICES), QUEBEC

An Order in Council, dated June 17, and published in the *Quebec Official Gazette*, June 20, amends the previous Orders in Council (LABOUR GAZETTE, August, 1940, page 868, October, page 1076, and July, 1941, page 854). Building trades and labourers are deleted from the wage scale and it is provided that the wage rates be those provided in the building trades agreement in the construction industry. Sick leave of one month is granted if necessary to employees with five years' service.

Service: Custom and Repair

GARAGES AND SERVICE STATIONS, MONTREAL

An Order in Council, dated June 11, and published in the *Quebec Official Gazette*, June 13, extends the term of this agreement (LABOUR GAZETTE, August, 1941, page 1013, and April, 1942, page 483) to June 23, 1943. Another Order in Council of the same date adds the trade "vulcanizer" to the group of body workers, etc.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, ROUYN AND NORANDA

An Order in Council, dated June 17, and published in the *Quebec Official Gazette*, June 20, amends the previous Order in Council for these trades (LABOUR GAZETTE, April, 1942, page 484) by certain changes in arrangement of hours and in prices for haircuts.

BARBERS, MONTREAL

An Order in Council, dated May 29, and published in the *Quebec Official Gazette*, June 6, amends the previous Order in Council (LABOUR GAZETTE, October, 1941, page 1315, and December, page 1573) by making certain changes in apprenticeship regulations, etc. which do not affect the summary as previously given in the LABOUR GAZETTE.

HAIRDRESSERS, MONTREAL

An Order in Council, dated May 29, and published in the *Quebec Official Gazette*, June 6, amends the previous Order in Council for this trade (LABOUR GAZETTE, July, 1941, page 855) by extending the term of the agreement to June 6, 1943.

SHIFT PRACTICE IN WAR INDUSTRY

Studies in Personnel Policy, No. 40, is the title of a report recently issued by the National Industrial Conference Board, Inc., New York.

Emphasizing the critical need for maximum output at this time, the report states "that multiple-shift operation in war industries is rapidly becoming the prevailing practice of operation.

"Instituting and maintaining continuous operation is not a simple problem. Even if a constant flow of materials can be obtained it is frequently impossible to secure a sufficient quantity of competent labour. When men must be trained it is only gradually that operations can be extended into a second and third shift. Meanwhile, men are worked long hours on a single or two-shift basis. Their earnings are increased so much from overtime work that often they are unwilling to go back to forty or forty-two hours a week when labour becomes available to make this possible. Therefore, shift schedules that are reasonably agreeable to employees must be worked out.

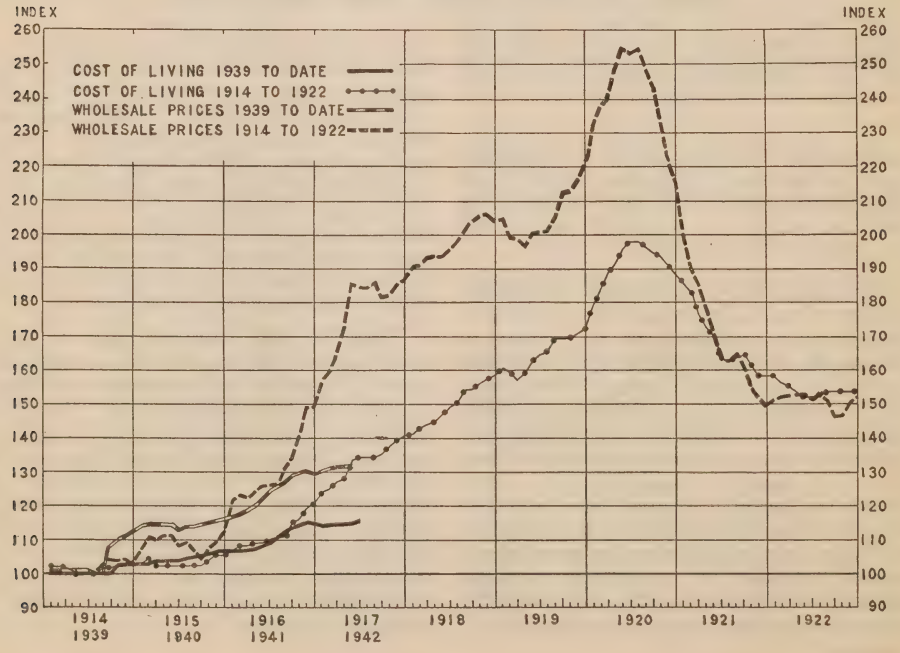
"It is almost impossible to provide a perfectly balanced flow of either materials or production and, consequently, three full shifts a day, seven days a week, are sometimes unattainable. Certain operations lag somewhat and others must wait for them. It is not uncommon, therefore, for the second shift to be smaller than the first and the third to be, perhaps, only a skeleton shift devoted to overcoming the shortages and taking care of bottlenecks. In other cases, practically a full force is maintained on each shift.

"There are also personnel problems. Rotation of shifts is practised in some companies in order to equalize the advantages and disadvantages of day and night shifts. But this is sometimes unacceptable to the long-service and usually more valuable employees who feel that their service entitles them to steady work on the day shift. Even a higher rate for night work does not always overcome objections to the night shift. Therefore, when men are kept steadily on night work the force is likely to be depleted as employees secure work elsewhere on day shifts."

PRICES, RETAIL AND WHOLESALE IN CANADA, JUNE, 1942

Cost of Living, Prices of Staple Articles and Index Numbers

THE official index number of the cost of living in Canada calculated by the Dominion Bureau of Statistics on the base period 1935 to 1939 as 100 advanced from 116·1 at the beginning of May to 116·7 at the beginning of June due to advances in the food group the index for which increased 1·5 percent during the month. Beef prices were considerably higher and advances were recorded also in the prices of certain other meats as well as in eggs and potatoes. Slight declines were recorded for the fuel group and for the home furnishings and services group. The rent, clothing, and miscellaneous groups were unchanged. Comparative figures for the official index at certain dates are 116·7 for June 1942; 116·1 for May; 110·5 for June, 1941; 104·9 for June, 1940; and 100·8 for August, 1939, the last prewar month. The increase since August, 1939, down to June, 1942, was 15·8 percent as compared with an increase of 33·3 percent between July, 1914, and May, 1917, the equal period during the last war.



After adjustment to base 100·0 for August, 1939, as required by Order in Council P.C. 5963 of July 10, 1942, replacing P.C. 8253 of October, 1941, the index was 115·8 for June 1, as compared with 115·2 for May 1, 115·0 for April 1, 114·5 for January 2, and 114·6 for October 1, 1941.

Foods advanced 27·1 percent between August, 1939, and June, 1942, clothing 19·8 percent; home furnishings and services 16·8 percent; fuel and light 13·7 percent; rent 7·2 percent; and the miscellaneous group 5·7 percent.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the LABOUR GAZETTE, for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the LABOUR GAZETTE the activities of the Board in the operation of the price control policy are summarized. Prices of fresh fruits and vegetables and certain kinds

*** For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.**

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING FOR EIGHT CITIES IN CANADA AT THE BEGINNING OF JUNE 1942

August 1939=100

—	Total	Food	Rent	Fuel	Clothing	Home Furnishings and Services	Miscellaneous
Halifax	114·0	129·0	104·2	105·9	116·1	114·7	105·7
St. John	115·4	124·9	107·3	109·5	120·8	116·0	107·6
Montreal	118·2	130·7	108·3	114·8	123·2	117·6	105·1
Toronto	115·5	126·7	108·5	117·7	117·3	114·0	107·3
Winnipeg	113·1	124·1	104·4	107·1	116·8	115·6	105·6
Saskatoon	116·2	126·5	113·1	107·0	119·2	119·9	105·0
Edmonton	112·0	123·0	100·0	99·4	123·0	117·0	104·9
Vancouver	113·1	126·0	99·4	111·5	118·6	113·1	105·2

of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers. Onions were placed under a price ceiling in January the basic period being the week ended January 10, and potatoes in March with the basic period February 2-7. Effective May 18, 1942, maximum retail prices for bananas were specified under an order of the Board.

The index number of the cost-of-living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269·50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July,

minous. (f) Higher price is for coal in sacks. (g) Natural gas used extensively. (r) Few six-roomed houses occumines. (v) Workingmen's houses are mostly of four and five rooms; modern, $24–$28, semi-modern, $20–$24. * In the 2 per cent are not included in the prices of fuel. † Revised to Sept. 1940; deduct 50 cents bagging charge.

114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6; May, 120·9; June, 121·8.

The accompanying chart shows the trend of the cost-of-living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The index number of Wholesale Prices calculated by the Dominion Bureau of Statistics and based upon average prices during 1926 as 100 was 95·8 for June as compared with 95·2 for May; 90·0 for June 1941; 81·6 for June, 1940; and 72·3 for August, 1939. The animal products group advanced 2·6 per cent during the month and vegetable products 0·7 per cent. Other group changes in the chief component materials classification were slight. The increase in the general index between August, 1939, and June, 1942, was 32·5 per cent. The index of Canadian farm products advanced 39·6 per cent during the same period, consumers' goods 32·0 per cent, and producers' goods 33·0 per cent. The increase in the general index between July 1914, and May, 1917, was 85·2 per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of June of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (LABOUR GAZETTE, December, 1941, page 1462), the price ceiling established by P. C. 8527 (LABOUR GAZETTE, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administeed by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P. C. 5003 (LABOUR GAZETTE, October, 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 748. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaïmo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail prices of beef averaged considerably higher at the beginning of June, than for the previous month and smaller increases were recorded also in the prices of other meats. During May the Wartime Prices and Trade Board set new maximum wholesale prices which took account of seasonal variations as between grass-fed cattle and the more costly winter-fed cattle, when a shortage of beef threatened in Canada. Beef cattle were being exported to the United States in large numbers at prices with which Canadian processors could not compete and enable the retail prices in Canada to be held under the ceiling established last autumn when grass-fed cattle were being marketed. See LABOUR GAZETTE, June, 1942, page 681. Sirloin steak averaged 36·8 cents per pound at June 1, as compared with 34·7 cents at May 1, and 33·8 cents at December 1, 1941. Fresh pork advanced from 33·3 cents at the beginning of

May to 33·6 cents at the beginning of June while bacon was fractionally higher at 43·4 cents.

The price of fresh eggs, 35·4 cents per dozen, was slightly higher at June 1, than at May 1. The price at June 1, 1941, was 27·4 cents per dozen. The price of creamery butter at 39·3 cents per pound was the same as at May 1 as compared with 34·9 cents for June, 1941. Production during the first five months of 1942 was about 10 per cent less than for the similar period during 1941. The figures as to production during June, 1942, were two per cent greater however than for June, 1941. By an order of the Wartime Prices and Trade Board effective May 1, 1942, the ceiling prices on milk and dairy products were reorganized with a view to leaving a more equitable and balanced price structure. The price of cheese which had declined at May 1 showed further decline at June 1, when the average was 35·3 cents per pound as compared with 36·5 cents at April 1. Higher prices for onions were reported from most localities and the Dominion average price was 7·7 cents as compared with 7·2 cents the previous month. Potatoes averaged 42·9 cents for 15 pounds at June 1, 40·9 cents at May 1, and 25·1 cents at June 1, 1941. The prices of bananas which averaged 14·2 cents at June 1 have advanced gradually since the beginning of the year when the average was 11·1 cents per pound.

The following are the prices reported for Welsh coal, "cobbles" and "French nut" at the beginning of June, 1942; Halifax $18.50; Charlottetown $17.90; Saint John $18.50; Quebec $16.50; Three Rivers $17.25; Sherbrooke $18.75; St. Hyacinthe $17.50; Montreal $17.75; Kingston $18.50; Belleville $18.50; Oshawa $18; St. Catharines $18; Hamilton $17.50; Brantford $17.75.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables which appear quarterly give the official and certain other index numbers of the cost-of-living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries.

Since these tables are compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 200 at May 1, a rise of 0·5 per cent for the month. Food prices were practically unchanged, as were also rent, clothing and fuel and light. In the "other items" group, however, there was a rise of 12 per cent for the month due chiefly to the average advance of about 37 per cent in prices of tobacco and cigarettes following the increased rates of duty provided in the recent Budget.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics, Department, on the base 1926-1930=1,000, was 1,357 for March, as compared with 1,352 for February. All groups were slightly higher or unchanged from the February level, except for a slight decline in vegetable foods.

COST OF LIVING.—The official index number, on the base 1926-1930=1,000, was 1,078 for March, as compared with 1,080 for February. The decline was due to lower prices for vegetable foods.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 98·8 for May, an increase of 0·1 per cent for the month. For this period, increases were recorded in seven groups, declines in three, but in no group did the change amount to as much as one half of one per cent.

COST OF LIVING.—The Bureau of Labour Statistics index number, on the base 1935-1939 =100, was 116·0 at May 15, an advance of 0·8 per cent for the month, due principally to an increase of 1·7 per cent in food prices.

A special survey was made June 2 "to ascertain the immediate effect of the General Maximum Price Regulation, which became applicable in retail trade on May 18. The order provided that prices of most of the goods purchased by moderate income families be reduced to the highest level that prevailed in March." This survey showed that the index number at June 2, was 115·9 a decline of 0·1 per cent from the May 15 level. "This is the first time that the index of the cost of living has shown any decrease since November, 1940."

RECENT LEGAL DECISIONS AFFECTING LABOUR

British Columbia Appeal Court Upholds Grant of *Mandamus* to Enforce Payment of Old-Age Pension

WITH Chief Justice McDonald dissenting, the British Columbia Court of Appeal on April 14 upheld a decision of Mr. Justice Manson in British Columbia Supreme Court granting a *mandamus* to compel the payment of a pension pursuant to the Dominion and British Columbia Old Age Pensions Acts (LABOUR GAZETTE, March, 1942, p. 378). The respondent's pension had been stopped by the Workmen's Compensation Board, which administers the Act, on the ground that he had made a transfer of property contrary to Regulation 23 under the Dominion Act. The lower court held that the transfer had been made in discharge of a legal debt and was therefore not "voluntary" as Regulation 23 specifies. Moreover, a writ of *mandamus* was proper since the Board was not a general agent of the Crown but an agent of the legislature set up for a definite purpose, and the funds it was disbursing, though public funds, were specifically allocated for the purpose.

The majority, through Mr. Justice O'Halloran, upheld the lower court decision that a transfer of property in discharge of a *bona fide* debt is not voluntary. It was held, moreover, that in the present case the transfer would not have needed the Board's approval even if it had been voluntary. If Regulation 23 is not to be inconsistent with the provisions of the Act, it must be interpreted as requiring the Board's approval for a transfer only when the income value of the property affects the retention of the pension. Since the income value of the property concerned was much less than the amount which may be held in conjunction with the maximum pension, the respondent's right to the full pension was not affected by his surrender of title. The fact that the Board had stopped the pension entirely instead of reducing it showed that its reason was not that the transfer was "voluntary" but that it was under the impression that all transfers were prohibited.

The Board had, moreover, rendered itself subject to *mandamus* since it has refused the performance of an express duty. Chief Justice McDonald held that *mandamus* lies only where there is no other remedy, but the majority disagreed with this interpretation. The writ of *mandamus*, it was held, was brought into being to remedy defects in the administration of justice, and though the granting of it is discretionary if there is a convenient alternative remedy, the fundamental consideration is the speedy and efficacious administration of justice.

Claims of the appellant Board that public funds cannot be reached by *mandamus* and that the Board is a servant of the Crown were rejected. The question of "reaching public funds" by *mandamus* did not properly arise, since the money had been appropriated and was available, and the difficulty arose merely because the Board refused to apply it as the statutes imperatively required it to do. At the same time, the Court was not attempting to command the Crown, but on the contrary, was acting to compel the servants of the Crown to obey the Crown's commands. *Rex ex rel Lee v. Workmen's Compensation Board,* (1942) 2 Western Weekly Reports 129.

Quebec Appeal Court Upholds Conviction under Section 502A of Criminal Code for Dismissal of Union Members

The Quebec Court of King's Bench on June 27 dismissed the appeal of Society Brand Clothes, Limited, against a decision of Mr. Justice Archambault, acting as Magistrate, whereby the company was convicted on March 27 of violating Section 502A of the Criminal Code and fined $300 including costs. The prosecution of the Company and four of its officers followed the dismissal of six workers who had become members of the Amalgamated Clothing Workers of America. The charges against the four officers were dismissed and the Company held responsible for the offence.

Section 502A of the Criminal Code, which was enacted in 1939, declares

"guilty of an offence punishable on indictment or on summary conviction before two justices, and liable on conviction, if an individual, to a fine not exceeding $100 or to three months' imprisonment, with or without hard labour, and if a company or corporation, to a fine not ecexeding $1,000"

any employer or his agent who "wrongfully and without lawful authority" refuses to employ or dismisses from his employment any person for the sole reason that such person is a member of a lawful trade union or of a lawful association or combination of workmen or who seeks by threat of dismissal or by dismissal to compel workmen to abstain from belonging to a lawful trade union.

The principal grounds of appeal were:

(1) That the offences created by S. 502A are not indictable offences, that is criminal offences, but merely simple offences (infractions) and consequently the trial and conviction under Part XVI of the Criminal Code was bad; and

(2) That the trial Judge was wrong in interpreting the words "sole reason" in the section as meaning the "principal reason," "determining cause" or "causa causans."

Regarding the first ground of appeal, it was pointed out by the Court that numerous sections of the Code provide for the trial of an indictable offence by summary proceedings and that nowhere in the Code is there any provision for the trial of a simple offence or infraction by indictment. If an offence may be prosecuted on indictment, it is an indictable offence and "does not lose that character because it is also punishable on summary conviction." (Barclay, J.)

As to the second ground of appeal, relating to the meaning to be given to the word "sole", Mr. Justice Bond expressed his opinion thus:

"the learned Magistrate was right in holding as he did that the determining cause is to be looked at. It is true in the present case that a number of other causes are set out by the Appellant which *might* have determined the Appellant to dismiss these employees: such as for example, insubordination, inefficiency, wasting time. But the striking fact emerges that none of these grounds were acted upon until after the employee had joined the Union. That was the proximate cause or *causa causans*, or sole cause, for the prior conditions were potential and remained such until the efficient or determining cause arose and was given effect...

"To hold that the mere co-existence of other potential causes which had not been acted upon or become effective to bring about a dismissal, precludes the Article from being applicable, would be a strange construction. It would for all practicable purposes render it nugatory, and moreover, would fail to give effect to the provisions of the Interpretation Act, R.S.C. 1927, Ch. 1, Section 15,"

that every Act shall be deemed remedial and "shall accordingly receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act and of such provision or enactment, according to its true intent, meaning and spirit."

In Mr. Justice Bond's words,

"The effect of Article 502A could always be thwarted by invoking some minor dereliction as a concomitant cause depriving the Article of any effect."

Mr. Justice Barclay was of the same opinion:

"If the proof establishes that the *real* reason for the dismissal of an employee, or the refusal to employ him, is the fact that he belongs to a union, then such action is wrongful and without lawful authority, although an attempt be made to show that there also existed several other possible reasons.

"If the fact that an employee belonged to a union is the *real* reason for his dismissal, it is not one of several reasons but the only real reason for the dismissal."

The right of the workers to freedom of association is now recognized by all, said Mr. Justice Francœur. Questions of contracts, wages, etc., are within provincial jurisdiction but if any one seeks by the means described in Section 502A, to prevent a workman being employed, his conduct is criminal and as such a matter for the Dominion Parliament. Mr. Justice Francœur stated that whether their union membership was the "sole reason" for the dismissal of the men depended on the evidence and the statement of the trial Judge as to the facts should be accepted. The evidence showed that the six workmen had been dismissed some days after they joined the union and that three of them had been told that the only reason for their dismissal was their membership in the union. They were competent workmen and had given satisfaction for several years. He agreed with Mr. Justice Archambault in holding that the court must interpret the words, "sole reason" so as to ensure that the purpose of the legislation is realized and that the words as used in this section mean the determining cause. *Society Brand Clothes Limited v. the King*, Quebec Court of King's Bench (Appeal Side), June 27, 1942.

Quebec Appeal Court Modifies Injunction Restraining Union's Activities During Strike

By a judgment delivered on June 26, 1942, the Quebec Court of King's Bench modified an injunction granted by the Montreal Superior Court on December 31, 1938 restraining officials and members of the International Ladies' Garment Workers' Union from interfering with the business of the Ideal Dress Company.

The proceedings arose out of a strike called by the union on November 25, 1937, to protest the alleged dismissal of certain employees for union activities and the refusal of the Company to negotiate a collective agreement with the union. During the strike the Company's premises were picketed and on December 11, 1937 it obtained an interim ex parte injunction which was renewed from time to time, and which on January 4 the Court ruled was not intended to prevent all picketing.

On December 31, 1938 an interlocutory injunction was granted in favour of the Company on the ground that the latter would suffer a greater inconvenience if the injunction were not issued and if the case was later decided in its favour then the union would suffer if the injunction were wrongly issued. (LABOUR GAZETTE, 1939, p. 236).

Permission to appeal was given to the union on January 3, 1939 but the case was delayed by the death of one of the official stenographers before his notes were transcribed so that much of the evidence had to be reheard in the lower court. When the appeal was

finally heard in 1942 the strike had long since ceased, but in the opinion of Mr. Justice Barclay "mere lapse of time should not be considered a cure for any ill which may have originally existed." Mr. Justice McDougall, on the other hand, was inclined to dismiss the appeal on the ground that "the strike has long since been settled and the necessity for any interlocutory injunction order is exhausted." He added that "Courts are not called upon to give opinions but to render judgments." However, he later decided that his objections were not of sufficient weight to justify a formal dissent from the opinions of the other members of the Court who all agreed completely with Mr. Justice Barclay's judgment.

The injunction granted by the Superior Court prohibited

> "any interference with the respondents' business, watching or besetting in any way, all picketing, all inducing or soliciting of the respondents' employees to leave the respondents ....and all organization in any manner whatsoever, directly or indirectly, to commit any of these acts."

Mr. Justice Barclay in delivering judgment declared that since the evidence failed to establish which side started the disturbances which occurred during the strike, there was nothing to justify such a comprehensive injunction which had the effect of "paralysing completely all possible acts of the appellants, legal or illegal." He went on to say—

> "under our law as it at present stands.... employees have the right to strike which constitutes *per se* an interference with the respondents' business; they have the right peaceably to counsel and urge other workers to go on strike or to join a union; they may watch and beset for the purpose of obtaining information; peaceful picketing is not prohibited so long as it does not constitute a common-law nuisance; and organizing on the part of workmen to accomplish legal ends.... is encouraged by our most recent Provincial law. There was no valid reason given for denying to the appellants these rights and, in order to protect the respondents it was not necessary to deny them."

The Court held, moreover, that in examining an application for an injunction of this nature, a Court should consider first whether

> "the injunction was a first step in the prosecution of a scheme to beat the strike and maintain an open shop, or was really necessary to protect the respondents' property."

The fact that a strike-breaking fund had been collected from the members of an employers' association before the strike had a bearing on this question. Secondly, an applicant seeking protection of this sort from the civil courts "must show that his conduct is fair and honest and free from any taint of fraud or illegality." The fact that the Company called two ex-convicts as witnesses to prove that violence had been committed and the further fact that the evidence failed to establish which side started the violence prejudiced the Company's position in this respect.

In the opinion of Justice Barclay "an injunction should be the last not the first remedy" for industrial disturbances. He went on to say:

> "Collective bargaining, the existence of trade unions and the right to strike as a means of obtaining demands are now all recognized by our law....By far the greatest remedy for non-observance of the law is the calling of a strike. The right to strike, being an exceptional right, must of course be exercised within strict limits, but the calling of any strike is bound to create bad feeling and to give rise to some disorder; no union, however perfect, should be held responsible for all cases of disorder nor be enjoined as soon as any disorder occurs."

The modified injunction granted by the Court stipulated that the appellants be restrained from causing a nuisance near the respondents' premises, and in particular from conduct likely to attract groups of persons to the premises or to deter persons from approaching, viewing or entering the place of business. The appellants were also forbidden to molest or intimidate the respondents' employees or applicants for employment, and to watch or beset the respondents' premises to compel them to do anything they are not obliged to do, or to refrain from doing anything they are at liberty to do. Subject to the foregoing, the right of the appellants to attend in reasonable numbers to give or secure information was upheld. The appeal was granted with costs. *Shane et al and Lupovitch et al,* Quebec Court of King's Bench, June 26, 1942.

Action for Workmen's Compensation under Saskatchewan Law not Barred to Railway Workers Resident in Alberta.

An interesting case concerning workmen's compensation for railway employees, who were residents of Alberta, came before the District Court at Swift Current in Saskatchewan. In these two provinces, statutes enacted in 1908 and 1911, respectively, continued to apply to men in train and engine service after the enactment of the Workmen's Compensation Act setting up a provincial Accident Fund. In Alberta the earlier statute no longer covers railway employees. Compensation is payable by the Workmen's Compensation Board and the workman has no right of action against his employer. But in Saskatchewan, certain classes of railway workers may bring actions for damages in the Courts in accordance with the earlier Act.

On June 2, Judge W. O. Smythe dismissed, with costs, motions by the Canadian Pacific Railway Company that actions for damages by three of its employees be barred. The plaintiffs, who resided in Alberta, were employed by the Company on work that was

performed partly in that province and partly in Saskatchewan and were injured in accidents in the latter province. The Company had reported the accidents to the Alberta Workmen's Compensation Board. The Court pointed out that this step might have been taken because the plaintiffs lived in Alberta or because the compensation appeared to be higher under the Saskatchewan Act. The three plaintiffs issued writs in the District Court at Swift Current, thereby electing to take advantage of the provisions of the Saskatchewan Workmen's Compensation Act, 1911.

After the writs were served, the Company applied to the Alberta Board for a hearing on the question whether Desharnais, one of the plaintiffs, was at the time of the accident a workman within the meaning of the Act and entitled to compensation, and settling the amount of such compensation. The Company also obtained a stay of the Saskatchewan proceedings pending the hearing before the Alberta Board. The plaintiffs did not appear at the hearing and were not represented. The Alberta Board found that the accident came within the provisions of the Alberta Act and that the employee was entitled to compensation.

The Saskatchewan Workmen's Compensation Act, 1911, dealing with accidents occurring in Saskatchewan gives the injured party the right to elect between action under the Act or action at common law and the Court found that he could not be deprived of this right by a statute of Alberta when the accident occurred in Saskatchewan. Judge Smythe stated:

"It is contended by the Company defendant that as the plaintiffs are residents of Alberta they are bound by the laws of Alberta, and that the Alberta Workmen's Compensation Act reads into their contracts that they shall have remedy only under the said Workmen's Compensation Act. Our Saskatchewan Workmen's Compensation Act, however makes any contract whereby a workman relinquishes any right to compensation from an employer for personal injury, arising out of and in the course of his employment, for the purposes of this Act, void and of no effect. If the workman cannot directly relinquish his rights he cannot do so indirectly, through an Act of the Alberta Legislature or otherwise."

The Court held that the plaintiffs clearly had the right of action, and no foreign legislation could deprive the Saskatchewan Court of its jurisdiction, much less could a foreign Government Board do so.

Under the Saskatchewan Act, no option was given to the defendant Company and it could not, by electing its own tribunal and taking the initiative, which properly belonged to the plaintiffs, deprive them of their right of action in the Saskatchewan Court.

A further claim of the Company that the actions of two of the plaintiffs were barred on the ground that they were not issued within six months was held to be not well founded. *Desharnais v. C.P.R., Shaw v. C.P.R., Harrison v. C.P.R.* (1942) 2 Western Weekly Reports 375.

Maintenance Men in Buildings Leased to Firms in Inter-State Commerce Subject to U.S. Fair Labour Standards Act

On June 1, the United States Supreme Court upheld decisions of Circuit Courts of Appeals in two cases in which workers engaged in the maintenance of loft buildings leased to firms manufacturing clothing for inter-state commerce were held to be subject to the Fair Labour Standards Act. The workmen concerned were firemen, electricians, elevator operators, watchmen and porters and the suits were initially brought by the Administrators who sought to enjoin the petitioners from paying wages lower than those fixed by the Act. The Court divided eight to one.

Mr. Justice Frankfurter, in delivering the opinion, pointed out that the Act provides that an employer must pay prescribed minimum wages "to each of his employees who is engaged in commerce or in the production of goods for commerce," and that "an employee shall be deemed to have been engaged in the production of goods if such employee was employed..... in any process or occupation necessary to the production thereof". The petitioners asserted that they themselves are not engaged in inter-state commerce since the building industry of which they are a part is purely local in nature, but this argument was rejected on the ground that "the provisions of the Act expressly make its application dependent upon the character of the employees' activities." They also submitted that the workers must participate in the physical process of making the goods before they can be regarded as engaged in their production, but it was held that this reasoning conflicts with the clause which provides that all workers are covered who are engaged "in any process or occupation necessary to the production". The work of the employees in the present cases "had such a close and immediate tie with the process of production for commerce, and was therefore so much an essential part of it, that the employees are to be regarded as engaged in an occupation 'necessary to the production' ". A final argument of the petitioners that their buildings were "service establishments" and thus were specifically exempted from the Act was rejected since "selling space in a loft building is not the equivalent of selling services to consumers". *Kirschbaum v. Walling, etc.; Arsenal Building Corporation et al v. Same,* Wage and Hour Reporter, Vol. 5, No. 23, p. 442.

VOLUME XLII] AUGUST, 1942 [NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June continued to show important expansion, according to data tabulated by the Dominion Bureau of Statistics from 13,069 firms, each employing a minimum of 15 persons, the returns being representative of all industries except agriculture, fishing, hunting and highly specialized business. The reporting firms had 1,718,329 employees at June 1, as compared with 1,674,763 in the preceding month; this gain of 2·6 per cent was not equal to the average increase recorded from May 1 to June 1 in the period, 1921-1941. The unadjusted index rose from 167·4 at May 1, 1942, to 171·7 at the beginning of June, being then much higher than that of 152·9 at June 1, 1941. Since the additions to the reported working forces were smaller than usual for the time of year, the seasonally-corrected index, also at 171·7 at the date under review, showed a decline, falling from 173·7 in the preceding month. Improvement was reported in each of the provinces and in the major industrial groups at the beginning of June, 1942; the distribution of the increases among the various industries, however, differed from that ordinarily indicated.

The indexes for June 1 in recent years of the record are as follows: 1942, 171·7; 1941, 152·9; 1940, 120·9; 1939, 113·1; 1938, 111·9; 1937, 114·3 and 1936, 102·0.

The upward movement in payrolls continued at June 1, although the increase was smaller than those recently reported; this was partly due to the observance of the Victoria Day holiday, which falling in the last week in May, in many cases affected the earnings disbursed at June 1. The co-operating firms in the manufacturing, logging, mining communications, transportation, construction, services and trade divisions reported the payment of $48,526,791 at the date under review to their 1,718,329 employees; at May 1, these establishments had employed 1,674,763 persons, whose earnings in the week preceding had aggregated $47,888,745. The per capita average declined from $28.59 at May 1, to $28.24 at the beginning of June. The reduction in the latter, though partly due to a loss of earnings over the holiday, was also seasonal in character, considerable numbers of persons being taken on in the industries normally expanding in the early summer, in which the rates of pay are generally below the average; in any case, those newly added to the staffs are ordinarily paid at the lower rates. Including those in financial institutions, the persons in recorded employment at June 1 numbered 1,781,719, whose earnings for services rendered in the week preceding aggregated $50,440,521. This was an average of $28.31 per worker, a decline of 34 cents as compared with the weekly average earnings distributed by the same employers at May 1, 1942.

Unemployment in Trade Unions.—At the beginning of July, 1942, the percentage of unemployment among trade union members stood at 2·5 in contrast with percentages of 2·4 at June 1 and 4·1 at the beginning of July, 1941. The percentage for July was based on returns compiled from 2,231 local labour organizations with a combined membership of 356,732.

Report of the Employment and Claims Offices.—Reports received by the Unemployment Insurance Commission from Employment and Claims Offices during the month of June, 1942, showed a gain over May, but a decline from the corresponding month a year ago, the main improvement in placements under the first comparison being in manufacturing and construction, and the largest losses under the second, in services, logging and agriculture. Vacancies for June, 1942, numbered 65,166, applications 130,689 and place-

ments in regular and casual employment 39,981.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon average prices in the period 1935 to 1939 as 100 was 117·9 at the beginning of July as compared with 116·7 for June; 115·5 for October, 1941; 105·6 for July, 1940; and 100·8 for August, 1939. The advance at the beginning of July was due mainly to increases in the food group chiefly in the prices of potatoes, meats and eggs. At the beginning of July the index was 17 per cent higher than August, 1939, the last pre-war month, as compared with an increase of 34·3 per cent between July, 1914, and June, 1917, the equal period during the last war. The increase between October, 1941, and July, 1942, was 2·4 points. In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 96·1 for July as compared with 95·8 for June, 91·1 for July, 1941; 82·6 for July, 1940; and 72·3 for August, 1939. The increase between August, 1939, and July, 1942, was 32·9 per cent and between July, 1914, and June, 1917 was 84·3 per cent.

Business Statistics.—The table on page 879 gives the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business which reflects activity in the production and distribution of goods was somewhat higher for June than for the preceding month but was 2·5 per cent lower than for June, 1941. The average for the first six months of 1942 however was about five per cent higher than for the similar period during 1941. The index of production of consumers' goods was at the lowest point recorded since February, 1941, while the index of production of producers' goods continued upward. Of the principal groups of activity represented in the general index, the production of electric power in June was fractionally higher than in May and about 19 per cent higher than in June, 1941; mineral production was somewhat lower in both comparisons while manufacturing production and the distribution of goods were both in somewhat smaller volume in June than in May but were higher than in June, 1941.

The index of employment continued upward in June being 2·5 per cent higher than in May, 12 per cent higher than in June, 1941, and 43·6 per cent higher than at the outbreak of war. The movement of workers into manufacturing industries as a result of war demands continued and the index for this group showed a much greater advance, 78·6 per cent since September, 1939, than that of any other class.

Cumulative figures for the first six months of 1942 show manufacturing production to be about 9 per cent greater than for the similar period in 1941. Production of factory cheese was 66 per cent greater in this comparison while creamery butter production declined 6 per cent. Other increases were 21·7 per cent in cigarette releases, 7·9 per cent in output of boots and shoes, 35·8 per cent in the production of steel ingots, 55·8 per cent in the production of pig iron, 6·2 per cent in the production of flour. Production of coal was 12·6 per cent greater while the receipts of gold at the mint were 6·6 per cent lower. For the construction industry contracts awarded were down 37·4 per cent for the six month period and building permits 23·6 per cent. Electric power production increased 18·3 per cent, carloadings 9·4 per cent, and retail sales 17·4 per cent.

Strikes and Lockouts.—The number of strikes and lockouts recorded for July, 1942, was 73, involving 22,672 workers and causing time loss of 54,402 man working days, as compared with 54 disputes during June involving 16,069 workers with time loss of 41,232 days. Many of the disputes in July involved comparatively small numbers of workers for short periods but the more important were strikes of munitions factory workers at Cherrier, P.Q., welders, machinists and blacksmiths in shipyards in Vancouver, B.C., wood factory workers at Lachute Mills, P.Q., tobacco workers at Montreal, P.Q., paper products and cable workers at St. Johns, P.Q., distillery workers at Montreal, P.Q., and pulp and paper makers at Fort Frances, Ont.

In June the more important disputes involved shoe factory workers at Quebec, P.Q., welders, machinists and blacksmiths in shipyards in Vancouver, B.C., distillery workers at Montreal, P.Q., steel and steel products workers at Trenton, N.S., meat packers at Kitchener, Ont., and paper makers at Mont Rolland and St. Jerome, P.Q.

During July, 1941, there were 29 disputes involving 22,170 workers with time loss of 48,859 days, and the principal disputes involved aluminum plant workers and construction workers at Arvida, P.Q., coal miners in Nova Scotia, gold miners at Dawson in Yukon Territory, steel car plant workers at Hamilton, Ont., and cotton factory workers at Hamilton, Ont.

Of the 73 disputes during July of this year 67 were terminated, 13 in favour of workers, nine in favour of employer, nine were partially successful, one was a compromise settlement, while 35 were indefinite in result. Six disputes, involving 1,314 workers, were recorded as unterminated at the end of the month.

Industrial Disputes Investigation Act

Ten applications for the establishment of Boards of Conciliation and Investigation were received during the month of July and one board was established. Seven boards submitted their reports. Seven disputes were referred to Industrial Disputes Inquiry Commissioners for investigation and four reports were received from Commissioners during the month. Two board applications were rejected. One strike vote was ordered by the Minister of Labour, in accordance with the provisions of P.C. 7307, as amended. Five disputes were recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 883.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA*

Decisions of National War Labour Board

Of the 226 cases in which Findings and Directions were delivered by the National War Labour Board to July 31, 1942, 117 had to do with wage increases, 27 with cost-of-living bonuses and 82 were miscellaneous. Of the wage cases, 111 were granted in full or in part and 6 were refused. Of the cost-of-living bonus cases 26 were granted and one was refused. Of the miscellaneous cases 72 were granted and 10 were refused.

An article, including the General Order of the National War Labour Board concerning the adjustment in cost-of-living bonuses, appears elsewhere in this issue.

Canadian Nutrition Program

The Department of Pensions and National Health has issued a pamphlet entitled "The Canadian Nutrition Program" outlining the measures to be adopted in carrying out the work of the Nutrition Services branch established in November, 1941, as reported in the LABOUR GAZETTE for May, 1942, p. 573. The program was approved at the meeting of the Canadian Council on Nutrition on June 5, 1942, which was established in 1938 (LABOUR GAZETTE, July, 1939, p. 652) and includes the following:

The inspection and supervision of food facilities in war industries, carried out by arrangement with the Department of Munitions and Supply and under Order in Council P.C. 1550, March 2, 1942.

The establishment of provincial and local committees in co-operation with the provincial Departments of Health and local Medical Officers of Health to form study groups and furnish information on the most nutritious foods, the efficiency of food expenditure, etc.

Educational methods: the furnishing of information for school children, the placing of posters in stores, public eating places, display of books on nutrition in libraries, co-operating with the Red Cross Society, the Health League of Canada, Women's Institutes, Local Councils of Women, etc., which have been doing valuable work on nutrition.

Research in specific relation to human dietaries, and the making of urban and rural surveys of the foods actually consumed in sample households and the health of the members of these households.

The promotion of the employment of paid nutritionists and dietitians.

Pamphlets and booklets on nutrition may be obtained on application to Nutrition Services, Department of Pensions and National Health.

Family Allowances in Great Britain

The Chancellor of the Exchequer in May, 1942, presented to Parliament a memorandum on family allowances. The memorandum was prepared in accordance with a promise made by the Chancellor to a deputation of Members of Parliament that he himself would investigate the question.

No conclusions are reached either for or against family allowances or in favour of any particular type of scheme, the purpose of the memorandum being merely to consider the administrative and other aspects of various schemes which have been proposed. The arguments for and against family allowances are noted without discussion. The Chancellor then proceeds to analyse various types of schemes and the memorandum concludes with an estimate of the cost of the schemes on the basis of three alternative assumptions as to eligibility for allowances.

There are two main types of family allowance schemes: contributory and non-contributory. In regard to a non-contributory scheme, it is considered desirable to confine it to persons of limited means, and four methods

of limitation are considered: (*a*) by a means test; (*b*) to parents compulsorily insured under the Contributory Pensions Scheme; (*c*) to parents with a child attending a public elementary school; or (*d*) to parents whose income is too low for them to pay income tax and thus to receive relief in respect of their children in the income tax assessment. In regard to the contributory scheme two fundamental questions are considered: (*a*) whether it should be compulsory or voluntary, and (*b*) what classes should be covered by it.

There is also some discussion of the problem of adjusting payments made under other schemes in respect of children, particularly: (*a*) contributory payments such as unemployment insurance benefits; (*b*) compensation payments such as orphans' pensions; and (*c*) need payments such as unemployment allowances.

Youth Training and Welfare Program in Britain

The President of the Board of Education, Mr. R. A. Butler, in introducing the Education Estimates in the House of Commons late in June announced the calling of a conference to review the whole system of industrial and commercial training including the apprenticeship system, and the formation of a National Youth Advisory Council to replace the National Youth Committee.

The President's statement to the House was summarized by the *London Times* as follows:

Mr. Butler said that we must recognize . . . that up to at least 18 young people should be regarded as still falling within the purview of the education service. He hoped the step taken in setting up the Youth Advisory Council would be an advance along the road to a more integrated national service for youth. If we were to do what was right by the health and welfare of our young people, not only was continued supervision necessary, but we must secure recognition that in their first years in employment young people were treated as learners and not simply as earners. In the interests of the youth of this country as well as out of consideration for our future industrial, commercial and strategic welfare, the time had come to review our whole system of industrial and commercial training.

As a first step in this plan representatives of employers, workers, the Ministry of Labour, the Board of Education for England and Wales and the Scottish Office of Education were called together "to consider the vital question of vocational training in relation to employment and to build the bridge between education and industry which the nation must have."

The second innovation announced by Mr. Butler was the appointment of the National Youth Advisory Council to co-ordinate the groups concerned with the welfare of young persons between 14 and 18 years old. The Council consists of representatives of the Service of Youth program, the churches, the services, the juvenile courts, the educational authorities, and employers and trade unions concerned with the employment of young people. This council is "the first attempt to include in one body many types working among our youth—administrators, members of youth committees, and younger people engaged in this work, whether in voluntary or pre-service organizations."

The voluntary and pre-service organizations have been greatly expanded since the war through the Service of Youth program which is a wartime scheme designed to channel the energies of youth into some form of national service. It is sponsored by the Board of Education and administered locally by the education authorities assisted by youth committees. In some areas these committees have set up youth centres to provide recreational and training facilities for out-of-school youth if the existing voluntary organizations did not seem adequate. The new Advisory Council will have general supervision over the Service of Youth program.

Forty-eight Hour Week Recommended For U.S. War Plants

Eight Federal agencies on July 28 jointly issued a statement of policy in regard to optimum hours of work in United States war plants for the guidance of Government establishments and contractors. They recommended a 48-hour week made up of six eight-hour days, one day's rest in seven, and a 30-minute meal period. They also stressed the value of holidays but suggested that these be spread over the whole year to avoid interference with production. The agencies signing the statement were the War, Navy, Commerce and Labour Departments, the Maritime Commission, Public Health Service, War Man-Power Commission, and War Production Board.

The policy is designed to ensure the maximum health and efficiency of the workers as well as to check the "pirating" of workers who are being enticed away from their jobs by offers of increased earnings for more overtime work. The recommendation is not intended to abolish the overtime pay requirements of the Fair Labour Standards Act or the Public Contracts Act for hours in excess of 40 a week nor to interfere with seven-day round-the-clock operation of war plants.

The agencies justified their policy in these words:

When daily and weekly hours are too long, the rate of production tends, after a period, to decrease, and the extra hours add little or no additional output; the quality of work may deteriorate during the whole period of work, not only during the hours of overtime; absenteeism rises sharply; the loss of time due to accidents and illnesses tends to increase. Effects upon the health and morale of the worker may be slow in appearing but are cumulative in nature. Irregular attendance disrupts the flow of production.

These conclusions have been corroborated by several recent studies on hours of work such as the ones conducted by the Industrial Relations Section of Princeton University (LABOUR GAZETTE, April, 1942, p. 390), the British Industrial Health Research Board (LABOUR GAZETTE, May, 1942, p. 511) and the Detroit plant of the Ford Motor Company (LABOUR GAZETTE, March, 1942, p. 257). The 48-hour week has also been endorsed recently by President Roosevelt (LABOUR GAZETTE, April, 1942, p. 389) and early in the year by the U.S. Secretary of Labor.

First Wartime Session of I.L.O. Joint Maritime Commission

The twelfth session and first war-time session of the Joint Maritime Commission of the International Labour Office was held in London on June 26 to 30 (LABOUR GAZETTE, June, 1942, p. 659). The Commission consists of shipowners and seamen from important maritime nations. At its recent conference it gave special attention to war-time problems. Of the resolutions it adopted four were of special interest to the Governments of the member states and have been transmitted to them by the Governing Body.

The first of these resolutions urged the Governments to take steps wherever possible to ratify such International Labour Conventions relating to seamen as they have not already ratified. The second emphasized the importance of increasing safety provisions for seamen in war-time and set forth detailed recommendations regarding life-saving, fire-fighting and pumping equipment for use on sea-going ships. The third advocated the centralization under the Government of the administration and financing of welfare schemes for merchant seamen. Finally, it was urged that, in view of the admirable record of Chinese, Indian and African seamen in the war, the conditions of employment and general treatment of such seamen should not compare unfavourably with those of western seamen.

Of the fifteen I.L.O. Conventions relating to seamen Canada has so far ratified only six, but there are a number of others with regard to which she has legislation putting them substantially into effect. Many of the important recommendations of the Maritime Commission regarding special safety appliances in war-time have already been put into effect in Canada by Orders issued by the Minister of Transport under authority of P.C. 3638, May 4, 1942. These Orders are summarized elsewhere in this issue. Canada has also done much to meet the requirements of the Commission regarding welfare. A Director of Merchant Seamen who is responsible to the Minister of Transport was appointed on June 5, 1941, and under his direction important steps have been taken to co-ordinate and improve welfare, manning and training facilities. (LABOUR GAZETTE, June, 1942, p. 793.)

I.L.O. Preparing Model Code of Safety Regulations For Factories

As part of its current program of planning for the post-war reconstruction period, the International Labour Office has begun to prepare an international model code of safety regulations for factories. Mr. Edward J. Phelan, Acting Director of the I.L.O. explained that work on the code has been undertaken for two reasons. In the first place, the war had stimulated industrial development in a number of extra-European countries, making it desirable that there should be approved international safety standards which can be used as basis for new national safety regulations. Secondly, the I.L.O. considered it desirable that international health and safety standards be formulated before the rebuilding that must be undertaken in devastated Europe and Asia is begun.

Preparation of the code was authorized at the last meeting of the I.L.O's Governing Body late in 1941, and since then the project has been under study by I.L.O. experts here. The preliminary draft will be prepared by Swen Kjaer, former chief of the Industrial Accidents Division of the United States Department of Labor. When it is completed, this draft will be examined by the I.L.O's permanent committee on accident prevention, which includes a number of world authorities on safety standards.

As projected by the I.L.O., the code will not be limited to safety provisions for work in factories, but will deal with certain aspects of the construction of factory buildings, such as the installation and equipment of factories, and their lighting, heating and ventilation.

"The Governing Body believes," Mr. Phelan said, "that this factory code will constitute a valuable contribution from the I.L.O. to post-war reconstruction. I am confident that the code will be another milestone on the path to the attainment of that high level of international safety standards which the I.L.O. has sought since its formation."

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

REPORTS were received during the past month from the Boards of Conciliation and Investigation established to deal with the following disputes:—

1. Between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists;

2. Between the McCord Radiator and Manufacturing Company, Walkerville, Ont., and its employees, members of Local 195, United Automobile Workers of America;

3. Between Gar Wood Industries of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America;

4. Between the Champion Spark Plug Company of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America;

5. Between the Canadian Bridge Company, Limited, and employees in its Plant No. 3, Ojibway, Ont., members of Local 195, United Automobile Workers of America;

6. Between the Canadian Steel Corporation, Limited, Ojibway, Ont., and its employees, members of Local 195, United Automobile Workers of America; and

7. Between McLennan Foundry and Machine Works, Limited, Campbellton, N.B., and its employees, members of Local 1456, International Association of Machinists.

The texts of the aforementioned reports will be found at the end of this statement.

Applications Received

In the month of July ten applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From employees of the Philip Carey Company, Limited, Lennoxville, P.Q., and its employees, members of the National Catholic Union of Sherbrooke, Inc. The dispute, which arose out of a request for union recognition and a collective agreement providing for increased wages and improved working conditions, was said to affect 114 employees directly. On July 30 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

2. From employees of Marine Industries, Limited, Sorel, P.Q., represented by the Metal Trades Council of Sorel, acting on behalf of the International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, the United Brotherhood of Carpenters of Joiners of America, the International Association of Machinists, the Brotherhood of Painters, Decorators and Paperhangers of America, the United Association of Journeymen Plumbers and Steamfitters of the United States and Canada, and the Sheet Metal Workers' International Association. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 2,000 employees directly and 3,500 indirectly. On July 18 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

3. From employees of the R.C.A. Victor Company, Limited, Montreal, P.Q., members of the Montreal Metal Trades Council's R.C.A. Union. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 1,275 employees directly and 355 indirectly. On July 20 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

4. From employees in the Longue Pointe Works of the Canadian Car and Foundry Company, Limited, Montreal, P.Q., members of Local 2525, United Steelworkers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 2,000 employees directly. On July 24 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

5. From employees of the Muir Bros. Dry Dock Company, Limited, Port Dalhousie, Ont., members of Local 680, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 81 employees directly and 115 indirectly. On July 28 Mr. J. S. McCullagh, Industrial Relations Officer of the Dominion Department of Labour, Ottawa, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

6. From employees of Halifax Shipyards, Limited, Halifax, N.S., members of Local 361, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, and Lodge 1250, International Asso-

ciation of Machinists. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 1,200 employees directly and 2,300 indirectly.

7. From employees of the Chrysler Corporation of Canada, Limited, Chatham, Ont., members of Local 127, United Automobile Workers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 3,000 employees directly.

8. From employees of Gypsum, Lime and Alabastine, Canada, Limited, Caledonia, Ont., members of Federal Labor Union 22367, American Federation of Labor. Approximately 170 employees were said to be directly affected by the dispute, which arose out of a request for increases in basic wage rates and in wartime cost-of-living bonuses and changes in existing provisions for vacations with pay. Inasmuch as the matters in dispute related to the remuneration of the employees concerned, the interested parties were advised that a Board of Conciliation and Investigation would not be established to deal with the dispute and that it would be necessary to submit these matters to the National War Labour Board for decision.

9. From employees of Regina Industries, Limited, Regina, Sask., members of Lodge 520, International Association of Machinists. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 650 employees directly.

10. From employees of Algoma Ore Properties, Limited, Wa Wa, Ont., members of Federal Labor Union 23159, American Federation of Labor. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 114 employees directly and 80 indirectly.

Board Established

On July 21 a Board of Conciliation and Investigation was established to deal with a dispute between Brantford Coach and Body, Limited, Brantford, Ont., and employees in its Mohawk Street Plant, members of Local 397, United Automobile Workers of America (LABOUR GAZETTE, July, 1942, page 761). On July 10 Mr. Bernard Rose, K.C., Montreal, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute. The Commissioner's report, received on July 20, indicated that he had been unable to effect a mutually satisfactory settlement and recommended the establishment of a board. At the end of the month two members of the board had been appointed, as follows: Mr. Drummond Wren, of Toronto, appointed on the nomination of the employees; and Mr. V. A. Sinclair, K.C., also of Toronto, appointed on the nomination of the employer. Messrs. Wren and Sinclair were requested to confer with a view to their submitting a joint recommendation of a person for appointment as third member and chairman of the board.

Other Dispute Referred to Industrial Disputes Inquiry Commissioner

On July 16 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Quebec Asbestos Corporation, Limited, East Broughton, P.Q., and its employees, members of the National Catholic Union of Asbestos Workers of East Broughton, in connection with which an application had been received in May, 1942, for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, June, 1942, page 660).

Other Reports of Industrial Disputes Inquiry Commissioners

A report was received on July 9 from Mr. Louis Fine, Industrial Disputes Inquiry Commissioner, on his investigation of the alleged unjust dismissal of two employees of the Otis-Fensom Elevator Company, Limited, Hamilton, Ont. (LABOUR GAZETTE, July, 1942, page 762). The Commissioner found that the grievance procedure in effect at the plant in question provides for reference to arbitration as a final step in the procedure. In the circumstances, he suggested that the matters at issue be dealt with in this way, rather than on the basis of a complaint to the Minister of Labour. The interested parties accepted the Commissioner's suggestion and requested that he act as arbitrator, they having bound themselves in advance to accept his findings. As arbitrator, Mr. Fine ordered the reinstatement of the two discharged employees, one with retroactive pay and seniority, and the other without retroactive pay. In the case of the latter employee, Mr. Fine suggested that it might be desirable to transfer her to a job with equal pay and quality of work in another part of the plant. Mr. Fine urged that the parties concerned give careful consideration to the question of absenteeism, which he found to be prevalent in the plant, and offered his assistance in this connection.

A report was received on July 11 from Mr. F. E. Harrison, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the Dominion Bridge Company, Limited, and employees in its Ordnance Plant, Burnaby, B.C., members of Local 2655, Steel Workers Organizing Committee (LABOUR

Gazette, July, 1942, pages 761-762). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute. The employing company recognized the union as the sole collective bargaining agency for all hourly-rated employees in the plant and entered into an agreement with the union, on a maintenance-of-membership basis, effective for the duration of the war. Subsequently the employees' application for the establishment of a Board of Conciliation and Investigation was withdrawn. The agreement is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

A report was received on July 13 from Mr. James Leslie, Industrial Disputes Inquiry Commissioner, on his investigation of a dispute between the City Dray Company, Limited, Winnipeg, Man., and its employees, members of Division 205, Canadian Brotherhood of Railway Employees and Other Transport Workers (Labour Gazette, April, 1942, page 392). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute. The employing company entered into an agreement with its employees, effective from January 1, 1942, to December 31, 1943. Subsequently the employees' application for the establishment of a Board of Conciliation and Investigation was withdrawn. The agreement is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

Application Rejected

The Minister of Labour has decided that a Board of Conciliation and Investigation will not be established to deal with a dispute between the Burrard (Vancouver) Dry Dock Company, Limited, Vancouver, B.C., and its employees, members of Welders' and Burners' Unit No. 4, Amalgamated Building Workers of Canada (Labour Gazette, July, 1942, page 762), in view of the fact that the dispute is essentially a jurisdictional dispute between the aforementioned union and Local 1, Boilermakers and Iron Shipbuilders Union of Canada. At the same time, however, the Minister has requested the interested parties to confer with the Honourable Mr. Justice S. E. Richards with a view to arriving at a mutually satisfactory adjustment of the matters at issue. Mr. Justice Richards previously had been appointed chairman of a Royal Commission to investigate production problems in British Columbia shipyards (Labour Gazette, July, 1942, pages 773-774).

59212—2½

Strike Vote

The recommendations contained in the report of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists (see pages 886-90) being unacceptable to the employees concerned, a request was made to the Minister of Labour that he order the taking of a strike vote among those employees, in accordance with the provisions of P.C. 7307, as amended. The Minister complied with this request and the strike vote was conducted on July 23 under the supervision of Mr. Raoul Trepanier, Montreal Representative of the Dominion Department of Labour. The question on the ballot was: "Do you intend to go on strike unless your employer, the Canadian Car and Foundry Company, Limited, recognizes Lodge 712, International Association of Machinists, as your bargaining agency for the purpose of executing a collective agreement?" The result of the ballot was as follows: "yes," 456; "no," 100; spoiled ballot, 1; total, 557. At the end of the month further efforts were being made to effect a mutually satisfactory adjustment of the dispute to avoid a stoppage of work.

Other Settlements

During the month of July a settlement was reached of the dispute between Canadian Vickers, Limited, and employees in its Marine Division, members of Local 2524, Steel Workers Organizing Committee (Labour Gazette, April, 1942, page 392). The dispute had been referred to Mr. Bernard Rose, K.C., Industrial Disputes Inquiry Commissioner, Montreal, for investigation and, in an interim report, the Commissioner recommended that a secret vote be conducted among all employees in the shipyard in order to determine their wishes in respect to representation for purposes of collective bargaining. At the request of the Minister of Labour, the vote was conducted under the supervision of Mr. F. W. Edge, Director of Industrial Relations for the Canadian National Railways, Montreal, assisted by Mr. Raoul Trepanier, Montreal Representative of the Dominion Department of Labour. The employing company entered into collective agreements with the unions chosen as bargaining agencies by the various classes of its employees. Subsequently the employees' application for the establishment of a Board of Conciliation and Investigation was withdrawn. The agreement between the company and the applicant union is summarized in the article entitled "Recent

Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

Mediation by Messrs F. E. Harrison and G. R. Currie, Vancouver Representatives of the Dominion Department of Labour, has resulted in the settlement of a dispute between the Sorg Pulp Company, Limited, Port Mellon, B.C., and its employees, members of Local 297, International Brotherhood of Pulp, Sulphite and Paper Mill Workers. On July 15 the parties concerned executed a collective agreement based upon the recommendations of the Board of Conciliation and Investigation established to deal with the dispute (LABOUR GAZETTE, June, 1942, pages 661-665). The agreement is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

A Board of Conciliation and Investigation has been successful in effecting a mutually satisfactory settlement of a dispute between the McLennan Foundry and Machine Works, Limited, Campbellton, N.B., and its employees, members of Lodge 1456, International Association of Machinists (see page 892).

Report of Board in Dispute between Canadian Car and Foundry Company, Limited, and Employees in its Turcot Works, Montreal, P.Q.

The Minister of Labour has received the findings of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists (LABOUR GAZETTE, June, 1942, page 661).

The personnel of the board was as follows: the Honourable Mr. Justice Paul Mercier, Chief Justice of the Circuit Court of Montreal, chairman, appointed on the joint recommendation of the other two members; Mr. James Somerville, appointed on the nomination of the employees; and Mr. D. A. Paterson, appointed on the nomination of the employer. All three reside in Montreal.

The report of the board is signed by the chairman and Mr. Paterson. A minority report has been submitted by Mr. Somerville.

The texts of the board's report and Mr. Somerville's minority report are printed below.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Parliament Buildings,
Ottawa, Ont.

Sir:

Re: Dispute between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists.

The Board of Conciliation appointed by you in the early part of the month of May, 1942, has now concluded its hearings in the dispute.

As constituted by you, the Board comprised Chief Justice Paul Mercier, of the Circuit Court of Montreal, Chairman, Mr. James Somerville, of Montreal, member representing Lodge 712 of the International Association of Machinists, and Mr. D. A. Paterson, also of Montreal, member representing the Company.

Most unfortunately this report represents the opinion and conclusions of a majority of the Members of the Board only, and it is, therefore, not a unanimous report. The signatories hereof are the Chairman, Chief Justice Paul Mercier, and Mr. D. A. Paterson.

In the final deliberations of the Members of the Board, when the whole problem before it was reviewed in the light of all the circumstances as revealed by the statements submitted by the representatives of the respective parties to the dispute and by the evidence produced including documents of a relevant nature affecting the general position of the Company and its employees in the two plants concerned, namely, Turcot and Dominion, it was hoped for a brief period, and even felt, that a unanimous report was not only possible but was indeed a probability. However, in the end, owing to conditions beyond control, that issue was not possible of attainment, and it was concluded that a minority report, in the circumstances, should be prepared and submitted to you, Sir, in due course, by the Employees' representative, Mr. James Somerville.

The problem submitted to the Board proved to be most unusual and complex.

As a consequence and of necessity the sittings of the Board were very numerous and of a protracted nature, every opportunity being given to either side to complete its case in the most minute detail. The Members of the Board were unitedly of the opinion that that course was not only necessary, but imperative, in view of the exceptional nature of the circumstances as they gradually unfolded during the hearings.

The Sessions of the Board commenced on the 16th of May and continued until the end of June, intermittently, of course, on account of the calls of private and other business upon the time of all the Members of the Board, as well as of the representatives of the parties to the dispute.

Towards the end of the hearings, the Chairman requested the disputants to confer amongst themselves in an endeavour to reach an amicable settlement. Both sides responded to the appeal of the Chairman with the best of goodwill, but, most unfortunately, the private conference was abortive of favourable results.

Representing the Company at the investigation were Mr. E. R. Viberg, Assistant Vice-President, and Mr. George Walsh, Director of Personnel.

From time to time Lodge No. 712 was represented by at least three of the following gentlemen, namely: Mr. Adrien Villeneuve, its Business Agent, Mr. Joseph A. Gauthier, Mr. Albert Viau, Mr. Lionel Valois, Mr. Robert Haddow and Mr. Irving Burman.

The brief submitted by the Lodge and supported by the verbal argument of its representatives, more particularly by that of Mr. Villeneuve, its Business Agent, charged that the Company, in failing to negotiate an Agreement with the Lodge respecting employment on the manufacture of Anson Wings in Turcot Plant, after repeated requests so to do, had violated in letter and in spirit the provisions of Order in Council P.C. 7440 and P.C. 2685.

The Lodge claimed the right to be recognized as the sole bargaining agency in the District of Montreal of employees engaged in the aircraft industry, and in its statement in support of its application for the present Board of Conciliation, it referred to the employment in dispute as being in the "Aircraft Industry."

In the course of the proceedings, the representatives of the Lodge petitioned the Board for permission to present witnesses to establish that discontent with existing conditions in the Plant was rampant, that desire for a change was wide-spread and that the Employees favoured Lodge 712 above the Canadian Car & Foundry Company, Limited, Employees' Association, hereinafter to be referred to.

The Board gave the necessary authority to both sides to cite witnesses. Unfortunately for the Lodge, the evidence of the witnesses called by it was adverse to its case. One witness, in fact, declared himself to be well content with the treatment accorded to him by the Company, he having been employed by it for a matter of 18 years and having received three increases in pay in recent times. Other witnesses testified more or less along similar lines, in no case establishing outright hostility to present treatment by, or relations with, the Company. In a few instances it was found necessary to recall witnesses to a subsequent hearing, it being alleged by a member of the Lodge that a certain witness had perjured himself. On being recalled and re-examined the witness in question reaffirmed the veracity of his previous statements without fear or hesitation.

The Lodge endeavoured to establish through a certain witness that the Company was intolerant in its attitude towards employees by the circumstances which resulted in the dismissal of the witness himself. The Company's representatives, however, established that this employee had been befriended by the Superintendent of the Company (who had given him a job only two months before on compassionate grounds), but had been indiscreet enough to present a petition to the self-same superintendent for increased pay to certain employees.

Altogether the Board considers that the witnesses subpoenaed on behalf of the Lodge failed to assist its case in any material way. The reverse, in fact, proved to be the case, and the Board must of course accept their testimony given under oath in so far as relevant to the subject matter in dispute.

The witnesses appearing for the Lodge were the following, namely:—

Joseph Rene Chenard,
Narcisse Durocher,
Lionel Allard,
Joseph Aristide Girardin,
Andre Menard,
Cleophas Taillon,
Henri Cloutier,
Albert Viau,
Noel Belanger,
J. R. Rochon.

The Company's defence of its actions and its reply to the submission by the Lodge were subsequently presented by Mr. E. R. Viberg and by Mr. George Walsh.

Through its representatives the Company contended that full compliance with the demands of the Lodge was impossible. It was pointed out that a properly constituted labour association known as "The Association of Canadian Car and Foundry Company Employees of Turcot and Dominion Plants" had been formed five years ago and had approached the Company to enter into a Collective Labour Agreement. The Company willingly agreed to negotiate such an agreement, which was in due course signed and made law by the Government of the Province of Quebec in virtue of The Collective Labour Agreements Act of the Province. The Agreement mentioned has been renewed annually since 1938 and the present Order in Council in effect is No. 492 of the 1st of February, 1940, modified by Orders Nos. 4255 of 1st December, 1940, 412 of 22nd February, 779 of 5th April, 1941, and 297 of 6th February, 1942. Under the last numbered Order in Council the agree-

ment is continued in full force and effect until 1st March, 1943. A copy of said Order in Council No. 492 is hereto attached, having been filed with the Board in evidence advanced by the Company. The territorial jurisdiction of the Order mentioned embraces the entire Dominion and Turcot Plants as may be observed in Article 11 –b– of the Order.

At the time that the Agreement was negotiated Anson Wings were not manufactured in any section of Turcot Plant. The manufacture of such wings was undertaken by the Company at the request of the Government of Canada, and a department of Turcot Works was set aside for the purpose, and it is this department over which the dispute has arisen. While it is true that the Professional Jurisdiction as defined in Article II-a of the Order does not include "Aircraft" manufacture, nevertheless the Company established that many of their workmen covered by the Order were intermittently employed both on Passenger and Freight Car Work and on Aircraft Parts. To consent, therefore, to entering into another Collective Agreement with another Lodge or Labour Association would subject such workmen to the governance of two Collective Labour Agreements, both within the same Plant—an impossible situation from the Company's point of view.

The Employees' Association, before referred to, claims a membership in both plants of over 1,600, whereas the number of men employed in the Anson Wing Department is around 300. The President of the Employees' Association, Mr. Albert Kirouac, and the Secretary, Mr. Norman Dawe, gave testimony at the hearings. They stated that the Agreement between the Company and the Employees' Association had been in effect for five years or so and had given much satisfaction to all concerned. The workmen, through their appointed delegates on the Joint Committee administering the Agreement, were brought into regular contact with the representatives of the management. Differences and complaints were heard and speedily settled. Many improvements in the comfort of the men had resulted, and they were satisfied that the Agreement was producing excellent results. They stated emphatically that the Employees' Association would definitely view with disfavour any Agreement by the Company with another Lodge or Labour Association. They believed serious trouble in the Plant would immediately follow the conclusion of any such Agreement.

Mr. Viberg and Mr. Walsh argued further that:—

1. The present Collective Labour Agreement in effect was sufficient for all essential purposes. It covered 90 per cent of plant operations and, as it had proven its value over many years, it should not be undermined or disturbed by any competing agreement with another body.

2. Two employees' associations, each partly in control of workmen operating under one roof, would without question completely jeopardize operations and result in chaotic conditions with loss of production and damage to contracts.

3. The operations on Anson Wings do not constitute an industry as contemplated in the usual way. The operations were on Aircraft Parts only, and they constitute only a very minor part of the Aircraft Industry, proper.

4. At most, the operations on wings are of a temporary character. The department might revert to its original use, namely, the production of cars, at any moment. The work is not a permanent feature of the company's activities.

5. The company regards the safety of its regular business as by far the more important consideration, which safety would be imperilled by the demands of the lodge, if approved.

The members of the Board visited Turcot Plant and made a survey of conditions. They viewed the operations proceeding there on the construction of wings and they satisfied themselves as to the nature of the work done. They also inspected other departments of the plant and discovered workmen engaged on a variety of parts later to be incorporated in the wings. Some of such parts were large, some were small, but they were all essential parts of "wings." However, such work was being done in a department usually devoted to car work and by workmen regularly engaged on passenger and car parts construction and governed by the Collective Labour Agreement made law by the Province of Quebec. The difficulty of segregating the operations, the control and the remuneration of such workmen under a further Collective Labour Agreement must, therefore, be very obvious.

When the public hearings were concluded, the Board fully and carefully deliberated upon all the information and evidence presented, finding in the following manner:—

Considering that a Collective Labour Agreement made law by the Government of the Province of Quebec presently governs all employees in Turcot and Dominion Plants, said Agreement having been entered into, in legal manner, by the Company and the Association of Employees, and remains in effect until 1st March, 1943, and

Considering that the Company's concern that the said Agreement shall remain unaffected and undisturbed and that it shall not be undermined in any way is readily under-

standable in view of the claims made that the Agreement has provided excellent results and harmonious relationships between Employer and Employees, and

Considering that the operations carried on by the Company do not constitute an "Aircraft Industry" as claimed by the Lodge, but actually represent the manufacture of parts thereof, as alleged by the Company's representatives, and

Considering that workmen in said Turcot Plant are alternately and intermittently engaged on car production and aircraft parts production, thus rendering impossible, or highly inconvenient and troublesome, the segregation of their respective activities, and

Considering that it is impractical to render such workmen liable to dual control as would happen by the creation of a further Collective Agreement, and

Considering that no definite case of grievance on the part of any employee has been established before the Board, the opinion being that the purpose of the Lodge in applying for a Board of Conciliation herein originated in a legitimate desire to extend its own scope of activity and authority, and

Considering that the Company has recorded its preparedness to pay the appropriate rates of wages for such work on aircraft parts as may be done in its plant, as established and approved by the Government department concerned, which, in the opinion of the signatories, should be sufficient under all the circumstances as exposed before the Board,

Be it Recommended that the Company be absolved from any requirement compelling it to enter into a Collective Labour Agreement respecting the manufacture of aircraft parts in Turcot Plant, Montreal, at the present time.

We have the honour to be, Sir,

Your obedient servants,

(Sgd) Paul Mercier, Chairman,
(Sgd.) D. A. Paterson, Member.

Montreal, P.Q., this 29th day of June, 1942.

Minority Report

Re: *Industrial Disputes Investigation Act and* re *matter of dispute between the Canadian Car & Foundry Company, Limited, and Employees in its Turcot Works, Montreal, P.Q., Members of Lodge 712, International Association of Machinists.*

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

Entertaining, as I do, the highest respect for opinions of my two colleagues on the Board, Chief Justice Paul Mercier, Chairman, and Mr. D. A. Paterson, representing the Company, I regret having to report disagreement on what, to me, are fundamentals and vital issues that must be taken in account in carrying through the all-out war effort sought by our Government.

Since the war started many restrictions have been imposed by Orders in Council on the peace-time freedom and activities of organized Labour, and, in one particular, willing acceptance by Labour was given to the extension, under the War Measures Act, of the Industrial Disputes Investigation Act to all war work.

The Government at Ottawa acknowledged this spirit of co-operation on the part of Labour with appreciation by passing Order in Council No. 2685 enunciating a labour relations policy to govern operations on Government contracts, including the right to organize in trade unions free from any control by employers or their agents, which Order also was accepted in full by Labour at its face value.

Hearings before the Board revealed the fact that in the month of July, 1941, employees in the aircraft department petitioned the management for consideration of a wage advance, which was denied, one of their number, held to be a ringleader, being summarily discharged, with the result that in self-defence the entire department became organized in Aircraft Lodge 712 of the International Association of Machinists.

It was further developed before the Board that following organization, Lodge 712, under date of September 18, 1941, forwarded a letter to Mr. P. Element, Plant Superintendent, requesting negotiations be entered into for an agreement such as in force in other plants, in the Montreal district, manufacturing aircraft.

Reply dated September 19, 1941, was received from Mr. Element stating in effect that all operations of the Turcot plant were covered by Provincial Order in Council No. 492 administered by a Joint Committee composed of representatives of employer and of the employees, constituted under the Collective Agreement Act of Quebec, making it impossible to comply with request during lifetime of said decree.

The decree itself produced before the Board does not substantiate this claim of the Company, but on the contrary expressly states that the Collective Agreement in effect between the Company and the association of Canadian Car & Foundry Employees only "applies to the manufacturing operations

relating to the making of Railway passenger and freight cars, buses, tramways and special delivery cars, industrial cars and parts accessories thereof"—Clause IIa Professional Jurisdiction

Produced also was a letter given the Lodge Secretary by the Deputy Minister of Labour for Quebec, Mr. Gerard Tremblay, in answer to inquiry and protest laid before him, which further discounts the Company's position. "If the Aircraft Division 712 thinks that the conditions of the Provincial decree are not satisfactory, there is nothing to stop it from trying to negotiate a particular agreement with the Canadian Car and Foundry."

According to representations made to the Board by spokesmen for Lodge 712, conditions in the aircraft Department are not satisfactory to its membership who comprise a great majority of those employed and who refuse to have anything to do with the association of Canadian Car & Foundry employees, commonly referred to as a company union, financed and fostered by the Company and not within the purview of P.C. 2685.

During the period of nine months, since application was made by the Lodge for a Board of Conciliation and Investigation, the membership have shown exceptional patience, confident in the justice of their claim for recognition, and assured of a favourable award from the Board based on Section 7, P.C. 2685 quoted as follows:—

"That employees, through the officers of their trade union or through other representatives chosen by them should be free to negotiate with employers or the representatives of employers' associations concerning rates of pay, hours of labour and other working conditions, with a view to the conclusion of a collective agreement."

All-out War calls for more than platitudes, Mr. Minister, and I respectfully suggest something further be done by your Government to dispel an ever growing feeling of frustration in the minds of responsible leaders in the labour movement of Canada.

Respectfully submitted,

(Sgd.) James Somerville,
Member.

Montreal,
June 30, 1942.

Reports of Boards in Disputes involving McCord Radiator and Manufacturing Company, Gar Wood Industries of Canada, Limited, Champion Spark Plug Company of Canada Limited, Canadian Bridge Company, Limited, and Canadian Steel Corporation, Limited, and Their Respective Employees

Reports were received during the month of July from the Boards of Conciliation and Investigation established to deal with disputes involving the McCord Radiator and Manufacturing Company, Gar Wood Industries of Canada, Limited, the Champion Spark Plug Company of Canada, Limited, the Canadian Bridge Company, Limited, and the Canadian Steel Corporation, Limited, and their respective employees, members of Local 196, United Automobile Workers of America (LABOUR GAZETTE, June, 1942, pages 660-661.)

The personnel of each of the boards was as follows: His Honour Judge A. J. Gordon, Windsor, chairman, appointed in the absence of a joint recommendation from the other two members; Mr. Drummond Wren, Toronto, appointed on the nomination of the employees; and Mr. W. H. Furlong, K.C., also of Windsor, appointed on the nomination of the employer.

Inasmuch as union recognition was the sole matter at issue in all five cases, the boards submitted their reports in consolidated form, the text of which is printed below.

Report of Board

To the Honourable Humphrey MITCHELL,
Minister of Labour,
Ottawa.

In the matter of The Industrial Disputes Investigation Act and in the matter of disputes, respectively, between Canadian Bridge Company, Limited, Canadian Steel Corporation, Limited, McCord Radiator and Manufacturing Company, Champion Spark Plug Company of Canada, Limited, and Gar Wood Industries of Canada, Limited, and as to each of the above companies, respectively, those of its employees who are members of Local 195, United Automobile Workers of America.

The above five disputes all relate to plants operating in the City of Windsor and each involve the same issue; namely, that of union recognition. The Minister of Labour in setting up a Board of Conciliation and Investigation, which now makes its report, referred to the one Board each of the five above-listed disputes.

The Board, after an earlier preliminary issue, conducted hearings at the Court House, Windsor, on Monday and Tuesday, the 22nd and 23rd June, at which representations were made on behalf of the various interests.

The first three mentioned companies were represented at the hearing by Mr. J. B. Aylesworth, K.C., as counsel and by the following executive officers of the respective companies: as to the Canadian Bridge Company, Limited, A. St. Clair Ryley and F. Pollock; as to the Canadian Steel Corporation, Limited, A. St. Clair Ryley and J. C. Coppick; as to McCord Radiator and Manufacturing Company, D. O. Hervie. The Champion Spark Plug Company was represented by Mr. S. L. Springsteen, K.C., and the Gar Wood Industries of Canada, Limited, was represented by Mr. Gordon L. Fraser, K.C.

The employees involved were represented in each instance by Mr. J. L. Cohen, K.C., as counsel, and by Messrs. George Burt and Robert S. Stacey, respectively, Regional Director for Canada and International Representative of the U.A.W.-C.I.O. In additon, the employees were represented as to Canadian Bridge Company, Limited, by Roy Brown, Chairman of the Canadian Bridge Company, Limited, U.A.W.-C.I.O. Committee; as to Canadian Steel Corporation, Limited, by John Mahoruk, U.A.W.-C.I.O.; as to McCord Radiator and Manufacturing Company by Theodore Anghell, U.A.W.-C.I.O.; as to Champion Spark Plug Company of Canada, by Clarence Forster; and as to Gar Wood Industries of Canada, Limited, by Walter Poole, U.A.W.-C.I.O.

The number of employees said to be involved at the time applications were submitted for the Board were as follows:—

Canadian Bridge Company, Limited, 500; Canadian Steel Corporation, Limited, 90; McCord Radiator and Manufacturing Company, 70; Gar Wood Industries of Canada, Limited, 250; Champion Spark Plug Company of Canada, Limited, 100.

Briefs were filed and read on behalf of all of the parties, supplemented by extended oral argument.

Recommendation

I recommend, in view of the fact which was made apparent at the hearing before this Board, that in the case of each of the five companies a majority of the hourly-rated employees are members of the Union, each company should enter into negotiations with such of its hourly-rated employees as are Union members through the officers of their Trade Union, or other representatives chosen by them, with a view to the conclusion of a collective agreement as contemplated by P.C. 2685. It is further recommended that any agreement which may result from such negotiations preserve the rights of those employees who are not members of the Union, which rights, in my view, are not intended to be interfered with by the provisions of the said P.C. 2685.

I express my deep appreciation to all parties for the complete and able manner in which the facts and issues of these cases were presented to the Board.

All of which is respectfully submitted.

Dated at Windsor, Ontario,
this 6th day of July, 1942.

(Sgd.) A. J. Gordon,
Chairman,

I agree with the above.

(Sgd.) W. H. Furlong,
Member.

Toronto,
Canada,

July 10, 1942.

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa.

Re: Boards of Conciliation in the matter of disputes, respectively, between: Canadian Bridge Co. Ltd., Canadian Steel Corp. Ltd., McCord Radiator and Manufacturing Co., Champion Spark Plug Co. of Canada, Ltd., and Gar Wood Industries of Canada, Ltd., and those employees of the above companies who are members of Local 195, *United Automobile Workers of America.*

Dear Sir:

In view of the fact that the report and recommendation submitted to you by the Chairman and the other member of the above-noted Boards clearly recommends recognition of the Union involved, namely U.A.W.-C.I.O., and that an agreement be made with that Union, I express my concurrence with that report without going into my reasons, other than to say that the employees "who are not members of the Union" and whose "rights" the report refers to constitute less than five per cent of the employees involved.

Respectfully yours,

(Sgd.) Drummond Wren,
Member.

Report of Board in Dispute between McLennan Foundry and Machine Works, Limited, Campbellton, N.B., and Its Employees

A unanimous report has been received from the Board of Conciliation and Investigation established to deal with a dispute between McLennan Foundry and Machine Works, Limited, Campbellton, N.B., and its employees, members of Local 1456, International Association of Machinists (LABOUR GAZETTE, July, 1942, page 761).

The personnel of the board was as follows: Mr. A. B. Lumsden, chairman, appointed on the joint recommendation of the other two members; Mr. F. C. Sherwood, appointed on the nomination of the employees; and Mr. A. F. Bisson, appointed on the nomination of the employer. All three reside in Campbellton.

Attached to the board's report is a memorandum of settlement reached by the interested parties with the board's assistance.

The texts of the board's report and the memorandum of settlement are printed below.

Report of Board

In the matter of the Industrial Disputes Investigation Act and re dispute between the McLennan Foundry and Machine Works, Limited, Campbellton, N.B., and its employees, members of Local 1456, *International Association of Machinists.*

The Honourable Minister of Labour,
Ottawa, Canada.

Sir:

The Board appointed by you to deal with the above dispute has concluded its deliberations and has the honour to submit its report.

Application for the creation of a Board of Conciliation under the above-mentioned Act was made on May 26, by Local 1456, International Association of Machinists, Campbellton, N.B. Mr. F. C. Sherwood was nominated by the Employees as their representative and Mr. A. F. Bisson was nominated by the Employer. Upon the joint recommendation of these two men, Mr. A. B. Lumsden was appointed the third member and Chairman of the Board.

The cause of the dispute was the request for Union recognition and collective bargaining rights.

The Board met on June 23 to discuss and agree upon procedure, to decide the time and date of first hearing and to make arrangements for place of hearing.

The first sitting of the Board was held on June 30 and after hearing the brief of the Employees and a verbal statement by the Employer, the meeting was adjourned to July 3 to permit the preparation of a written statement by the Employer.

A number of meetings of the Board were held at which verbal and documentary evidence was submitted. As a result of these meetings, concessions were made and approved by both parties. The board is pleased, therefore, to be able to report that an understanding has been reached and a memorandum of the understanding is enclosed herewith.

Respectfully submitted,

(sgd.) A. B. Lumsden,
Chairman,
(sgd.) A. F. Bisson,
Member,
(sgd.) Fred C. Sherwood,
Member,

MEMORANDUM OF SETTLEMENT

Campbellton, N.B.,
July 8, 1942.

This understanding between the McLennan Foundry & Machine Works, Limited, of Campbellton, N.B., and its Employees.

Clause 1. The purpose of this understanding is to establish and maintain harmonious relations between Management and Employees, to stabilize the conditions of employment, and ensure the smooth and efficient running of the plant without interruption.

Clause 2. All work performed outside of regular working hours on any shift shall be paid for at the rate of time and one-half, except on Sundays and Dominion holidays when double time will be paid. The Dominion holidays to be observed are as follows: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. When any of these holidays falls on a Sunday, the day proclaimed by the Dominion Government will be observed.

Clause 3. During the life of this understanding no stoppage of work shall take place through strikes or lockouts, and any dispute or grievance that cannot be settled between Management and its Employees shall be submitted to arbitration in the following manner:—

The management shall select one arbitrator, and the Representative of the men shall select another; the two thus selected shall agree on a third impartial arbitrator to act as chairman. If Management and Men cannot agree on the third arbitrator, the Dominion Minister of Labour shall be requested to appoint a man. The decision of the arbitration board so selected shall be final and binding on both parties.

(sgd.) H. M. McLennan,
President and Manager, McLennan Foundry & Machine Works, Limited.

(sgd.) Ronald C. Keeley, President,
(sgd.) Sidney M. Westmore, Rec. Sec'y,
Resitgouche Lodge, Local 1456, I.A. of M.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1942

THE following table shows the number of disputes, workers involved and time loss for July, 1942, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*July, 1942	73	22,672	54,402
*June, 1942	54	16,069	41,232
July, 1941	29	22,170	48,859

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts during July was nearly fifty per cent greater than during June, with corresponding increases in the number of workers involved and in the time loss. As compared with July, 1941, while the number of disputes was much greater and the time loss was appreciably higher, the increase in the number of workers involved was slight, as there were several strikes in July, 1941, involving large numbers of employees, while during July, 1942, most of the disputes involved small numbers of employees for short periods. The disputes causing considerable time loss were those involving munitions workers at Cherrier, P.Q., shipyard welders, machinists and blacksmiths at Vancouver, B.C., wood factory workers at Lachute Mills, P.Q., tobacco workers at Montreal, P.Q., paper products workers and cable makers at St. John, P.Q., and distillery workers at Montreal, P.Q.

In June, 1942, the more important disputes involved shoe factory workers at Quebec, P.Q., shipyard machinists, blacksmiths and welders at Vancouver, B.C., distillery workers at Montreal, P.Q. steel products workers at Trenton, N.S., meat packers at Kitchener, Ont., and paper makers at Mont Rolland and St. Jerome, P.Q.

In July, 1941, most of the time loss was due to strikes of aluminum plant workers and construction workers at Arvida, P.Q., coal miners at Glace Bay and Sydney Mines, N.S., steel car plant workers at Hamilton, Ont., foundry workers at Brantford, Ont., and gold miners at Dawson, Yukon Territory.

Eight disputes, involving 4,780 workers, were carried over from June and 65 commenced during July. Of these 73 disputes, 67 were terminated during the month. Thirteen resulted in favour of the workers, nine in favour of the employer, nine were partially successful, one was a compromise settlement, while 35 were indefinite in result. (Most of these were referred to Regional War Labour Boards for decisions as to increases in wages or in cost-of-living bonus.)

At the end of the month there were six strikes or lockouts reported as in progress, namely: welders, Vancouver, B.C., coal miners, Sydney Mines, N.S., carpenters, Sydney, N.S., foundry labourers, Trenton, N.S., bolt factory workers, Owen Sound, Ont., and machinists, Winnipeg, Man.

Owing to the one-day strike of employees in a machine tool manufacturing plant at Galt, Ont., on June 17, 1942, against an anticipated change in management an Order in Council (P.C. 5156) was passed on that day, under the War Measures Act and the Department of Munitions and Supply Act on the recommendation of the Minister of Munitions and Supply, appointing a Controller to manage, operate and carry on the business, undertaking, affairs and operations of the plant, and naming as Controller, Mr. Harry H. Whitehall, the general manager. This action was taken because the strike had interrupted the production of gauges necessary to war industry. On July 2, P.C. 5691 was passed revoking P.C. 5156 and appointing as Controller Mr. Roy T. Wise, Director-General of the Gauge and Cutting Tool Division of the Department of Munitions and Supply, in order that Mr. Whitehall should be free to devote his full time to the manufacturing operations in the plant.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one dispute of this nature, namely: truck drivers and helpers, Toronto, Ont., October 7, 1941, to December 31, 1941.

Two disputes in June were reported too late for inclusion in the LABOUR GAZETTE for July.

A minor dispute involved 14 labourers, shippers and truck drivers employed at a planing mill in Toronto for three hours on June 19. An increase in wages was desired but on the advice of a representative of the Regional War Labour Board work was resumed pending reference of the wage dispute to the Board.

A strike of 62 employees in one paper mill at Toronto, for three hours occurred on June 19. The workers desired an increase in wages but resumed work when advised by a representative of the Department that an application should be made to the Regional War Labour Board.

A number of workers in another paper mill in Toronto, Ont., stopped work at noon on July 28 to discuss a change in hours, including noon hour, and all except four resumed work in a short time. The others returned to work the next morning. It was reported that no changes were made.

A minor dispute involved 14 construction labourers in a stoppage of work for two hours on July 29 at Yarmouth, N.S., to obtain an increase in wages. After an explanation was given by the employer work was resumed without any changes.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to July

DISTILLERY WORKERS, VILLE LASALLE, P.Q.—This strike for increases in wages was terminated on July 4, when it was arranged that the employer would negotiate with the workers' representatives and adjust any grievances substantiated. The independent union to which the employees belonged became a local of the International Rectifying and Wine Workers Union of America, affiliated with the American Federation of Labour, and it was reported that the negotiations resulted in an agreement with the union, providing for wage increases, overtime rates of pay, a vacation of one week and seven holidays with pay per year, subject to approval by the Regional War Labour Board.

SHOE FACTORY WORKERS, QUEBEC, P.Q.—Work was resumed on July 5 pending consideration of the changes in wages and the payment of a cost of living bonus. At the end of July the Regional War Labour Board approved the payment of a bonus on the basis of 7·2 per cent, that is $1.80 per week for adult male workers and 7·2 per cent of earnings for male workers under 21 years of age and for female workers earning less than $25 per week. An application for a ten per cent increase in wage rates in addition to the bonus had been withdrawn. The order for the cost of living bonus was made applicable to all boot and shoe factories in the province of Quebec.

DYERS, TORONTO, ONT.—This strike, which commenced on June 9, was reported as terminated on July 9, when half of those on strike returned, without obtaining union recognition. Work had been carried on by re-arranging the work of other employees.

WELDERS (SHIPYARD), VANCOUVER, B.C.—A large number of the welders in one yard, members of the Amalgamated Builders' union ceased work on June 12 in protest against the dismissal of four workers on June 4, in accordance with the terms of a closed shop agreement with another union, the Boilermakers and Iron Shipbuilders. They were charged with canvassing for members against the boilermakers' union. The agreement provided for the employment of other workers if the boilermakers' union could not supply them, as long as such workers were not objected to by the union. Later on, returning to the yard, they were refused employment unless they joined the boilermakers' union and claimed they were locked out. Subsequently they were replaced to some extent. They had already applied for a Board under the Industrial Disputes Investigation Act and the western representative of the Department of Labour had been appointed an Industrial Disputes' Inquiry Commissioner to deal with the dispute. On July 15 the Minister of Labour requested the Chairman of the Royal Commission on shipbuilding production to deal with the welders' dispute and on July 21 he met with representatives of both unions and of the Department of Labour. A suggestion that welders in the Amalgamated should be employed during the war with the consent of the boilermakers' union was taken under consideration. During June there had been brief strikes in other yards in sympathy with the welders and on the other hand to enforce the boilermakers' agreement. On July 8 welders and electricians in four yards were reported on strike for short periods until July 10 in sympathy with the welders. On August 5 the welders agreed to join the boilermakers' union, and almost all were re-employed within two days.

MACHINISTS AND BLACKSMITHS (SHIPYARD), VANCOUVER, B.C.—As stated in the LABOUR GAZETTE for July work was resumed on July 4,

following a conference at Ottawa, regarding operating seven days per week, between the Minister of Labour and representatives of the various shipyard workers' unions, pending further consideration. On July 13 a Royal Commission was appointed to inquire into shipbuilding operations (Labour Gazette, July, p. 773). The inquiry began on July 20.

Disputes Commencing During July

Boom Men, Gatineau, P.Q.—A strike of boom men, employed by a logging company, on July 28, was terminated at noon on the next day, when the employer had ascertained that the increase in the allowance for pike poles desired was not contrary to the regulations of the War Labour Board.

Coal Miners, Sydney Mines, N.S.—Employees in one colliery ceased work in support of a demand for changes in working conditions which would increase earnings of borers. A dispute as to the clause in the agreement had been referred to the Joint Board of Adjustment which had suggested that a new clause should be negotiated. Work was resumed after one day, pending negotiations. On July 30 the miners again ceased work and at the end of the month a settlement had not been reached. On August 3 work was again resumed and later an increase was approved by the Adjustment Board.

Coal Miners, Stellarton, N.S.—Miners in one mine ceased work on July 27 against the employment of two men from another colliery of the company in a working place promised to two men already employed in the mine where the strike occurred. After two days work was resumed on order from union officials, pending negotiations with the company. The two men from the other colliery had already refused to take the new place until the dispute had been settled.

Coal Miners, Inverness, N.S.—The employees ceased work on Juy 27 against a reduction in shifts worked to one per day, which had been made two weeks previously, leaving a number of miners without employment. The management reported that owing to considerable absenteeism in past months it was considered that operations at only one shift per day would produce as much coal and reduce expense. The union complained that the agreement in effect provided that any change in conditions should be discussed with the union. Work was resumed after three days, the dispute to be referred to the Joint Board of Adjustment for Nova Scotia. It was arranged that in the meantime there would be partial operations on a second shift.

Coal Miners, Blairmore and Coleman, Alta.—Miners employed by three companies were reported to have ceased work on July 31 in protest against the employment of boys at work previously performed by men who had enlisted. The agreement provided for the employment of boys 17 and 18 years of age at $3.85 per day but the miners stated it was understood that they should work at only the lighter jobs and that for any other work the rate specified for men should be paid. Work was resumed on the next day, pending negotiations.

Paper Products Workers, St. Johns, P.Q.—A number of employees in one establishment ceased work on July 8 to obtain an increase in wages and recognition of the Cable and Paper Workers Federal Labour Union, Local 22783 of the American Federation of Labor. Discrimination against certain union members was also alleged. The strikers were joined by the employees of an associated cable manufacturing company, members of the same union. An Industrial Disputes Inquiry Commissioner and a conciliation officer investigated the dispute and work was resumed on July 25, when the employer agreed to raise the wages in the paper products mill to the level of those in the cable factory, subject to the approval of the Regional War Labour Board. Better arrangements for meetings between the management and committees of employees were also made. For some days the strikers picketed the plant and kept out officials and employees, also preventing shipments. The mayor of the city assisted in bringing about a settlement.

Pulp and Paper Mill Workers, Fort Frances, Ont.—A number of employees ceased work on July 20 to secure an amendment to the agreement between the various unions and the company to provide for two weeks holidays with pay each year, instead of one week. The paper makers and machinists on war work did not strike, but the former were indirectly involved in the stoppage. As a result of conciliation by the Honourable Peter Heenan, Ontario Minister of Labour, and a conciliation officer of the federal Department of Labour, work was resumed on July 27, the dispute being referred to the Regional War Labour Board for Ontario.

Wood Factory Workers, Lachute Mills, P.Q.—A number of employees in one establishment ceased work on July 6 to obtain an increase in wages. Men attending the wood dryers and boilers remained at work. The union, United Brotherhood of Carpenters and Joiners, appealed to the Minister of Labour

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to July, 1942

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for annual review.

† In this table the date of commencemnt is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 183 indirectly. *(b)* 100 indirectly. *(c)* 60 paper makers indirectly. *(d)* 12,242 indirectly. *(e)* 112 indirectly. *(f)* 900 indirectly. *(g)* 1,450 indirectly. *(h)* 21 indirectly. *(i)* 200 indirectly.

and were informed that wage increases would require the approval of the Regional War Labour Board. A representative of the Board conferred with the management and union representatives on July 7 but a settlement was not reached. On July 20 it was reported that the strikers on picket duty had barricaded the road and prevented entrance to the plant. Some windows were broken but, the police stated, not by the strikers. Work was resumed on July 29 when the management had agreed to negotiate with a grievance committee to revise the wage scale and submit the result to the Regional War Labour Board for approval.

Munitions Factory Workers, Cherrier, P.Q.—A number of employees ceased work on Monday, July 6, and others joined in the stoppage on Tuesday, with the result that the management closed the plant pending a settlement, owing to the danger under the conditions. Conciliation officers of the Department of Labour had arrived and met representatives of the various groups of employees, who agreed to resume work but other groups ceased work from time to time. The employees were stated to be members of a plant association of employees and of various organizing committees of the Montreal Metal Trades Council, affiliated with the Trades and Labour Congress of Canada and the American Federation of Labor, and organizing committees of the Canadian Congress of Labour and of the National Catholic Unions. The conciliation officers discussed conditions with the workers and their representatives and ascertained that they desired increases in wages, changes in working conditions and recognition of a union. They were informed that wage changes must be approved by the Quebec Regional War Labour Board and that the strike was in violation of the Industrial Disputes Investigation Act and that work should be resumed, after which these matters could be dealt with. Work was resumed before midnight on July 8. It was arranged that a ballot would be taken by the Department of Labour to ascertain the organization by which the employees wished to be represented, and that the management would take up grievances with representatives of this body; also that an application for wage changes would be made to the War Labour Board. The vote, on July 14, showed

that 8,715 workers favoured the Montreal Metal Trades Council and 1,020 the plant employees association.

Bolt Factory Workers, Vancouver, B.C.—Employees in one establishment on one shift ceased work for one-half day on July 11, demanding the dismissal of a foreman alleged to have discriminated against members of the union with which the management had an agreement. As a result of conciliation by representatives of the Department of Labour, work was resumed, the foreman being suspended pending investigation of the charges.

Metal Factory Workers, Longueuil, P.Q.—A number of girls in a munitions factory ceased work for a few hours on July 14 in protest against the use of hair nets for which they were required to pay, the nets being required by provincial regulations. As a result of negotiations work was resumed and the management agreed to pay for the hair nets. An official who had advised against the nets was discharged.

Truck Factory Workers, Windsor, Ont.—A number of employees in one establishment ceased work on July 17 against a change in the alternation of night and day shifts from every two weeks to once a month. Apparently there was a division of opinion among the workers. As a result of conciliation by the Department of Labour and of negotiations between the representatives of the United Automobile Workers of America, to which some of the men belonged, and the management it was agreed that work would be resumed on July 24 and that a vote of all employees would be taken.

Foundry Workers, Sackville, N.B.—A number of moulders, etc., in two plants ceased work when a cost-of-living bonus was refused by the employers and an application was not approved by the Regional War Labour Board, as the increase in the cost of living had been taken into account when wages were last changed. A union official arrived and advised the men to resume work as they were on strike illegally. Work was resumed on July 26, pending further negotiations and reference to the Board. The strike spread to a plant at Amherst, N.S., for one day on July 24.

Metal Factory Workers, Longue Pointe, P.Q.—A number of employees ceased work on July 24 for recognition of the United Steel Workers of America and an agreement providing for wage increases. An application for a Board under the Industrial Disputes Investigation Act had been made on July 15 and an Industrial Disputes Inquiry Commissioner was appointed. As a result of further conciliation it was agreed that work would be resumed and a vote taken as to which organization the majority of workers preferred.

Bricklayers and Carpenters (Steel Plant) Sydney, N.S.—A number of bricklayers and carpenters in a steel plant ceased work on July 28 and 29 respectively, the latter for an increase in wages and the former owing to a dispute as to the number of apprentices and their rates of pay. As a result of conciliation by a representative of the Department of Labour the bricklayers reached an agreement with the management and resumed work on July 30. The carpenters resumed work on August 4, pending a decision of the Regional War Labour Board.

Foundry Labourers, Trenton, N.S.—A number of labourers ceased work when one of their number was discharged following a fight with another worker, both being dismissed. Work was resumed on August 4 and 5.

Bolt Factory Workers, Owen Sound, Ont.—Employees in one establishment ceased work on July 31 against the delay in securing approval for an increase in wages provided for in an agreement negotiated with the employer and referred to the Regional War Labour Board on July 29. Work was not resumed until August 6.

Machinists, etc., Winnipeg, Man.—Following the organization of the employees in one metal manufacturing establishment as a local of the International Machinists' Association, the establishment was closed on July 31, the union alleging that union members were questioned and locked out. As a result of a conference of the manager with the Manitoba Minister of Labour and provincial and federal Labour Department officials, the employer agreed to re-open the factory on August 4 and to enter into an agreement with the machinists' union. A temporary agreement was signed with a shop committee on behalf of the union employees, to be effective from August 4 until August 15, when a further agreement with representatives of the international union would become effective. The temporary agreement provided for the reinstatement of all discharged during the previous two weeks, for time and one-half rates for work beyond eight hours each day and on statutory holidays and Sundays, those working on Sunday to be given a day off. The hiring and discharging of employees is vested in the management, subject to consultation with the shop committee. The duties and qualifications of various classes of work are set out and the rates of pay for all classes of workers.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the May issue, in the review of "Strikes and Lockouts in Canada and other Countries, 1941". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the Labour Gazette, August, 1940, page 760.

The number of disputes beginning in May was 174 and 5 were still in progress from the previous month, making a total of 179 disputes in progress during the month; 94,400 workers were involved in the disputes in progress during the month and the time loss was 306,000 working days.

Of the 174 disputes beginning in May, 80 arose out of demands for increased wages and 53 over other wage questions; 6 over working hours; 17 over questions as to the employment of particular classes or persons; 15 over other questions as to working arrangements; one over a question of trade union principle, and two were sympathetic disputes. Final settlements were reached in 130 disputes, of which 22 were settled in favour of workers, 75 in favour of employers and 33 resulted in compromises; in 28 other disputes work was resumed pending negotiations.

Australia

The number of disputes in the third quarter of 1941, was 185, involving 534 establishments and directly involving 125,056 workers. The time loss was 557,693 working days.

United States

The number of strikes beginning in May was 275, involving 58,000 workers in these new strikes. The number of working days lost in all disputes in progress during the month was 325,000. For June, the number of strikes beginning was 350, in which 100,000 workers were involved; the time loss in all disputes in progress during June was 550,000 working days.

Reducing Absenteeism

The National Industrial Conference Board Inc., New York, has issued a report dealing with the problem and preventives of absenteeism.

In the introduction to the report it is estimated that, in the United States, 350 million man days were lost in 1941 due to sickness alone. This is equivalent to an unemployment figure of approximately 1,250,000 throughout the year and represents a sizable reserve of man-power.

Sickness is not the only cause of absenteeism. It has been found that when there is an increase in the number of hours worked per week, the rate of absenteeism rises correspondingly.

The report states that there are methods by which much of the absenteeism may be prevented. However "before the problem can be formulated, it is necessary for each Company to have means of measuring its own absenteeism and to be thoroughly grounded on the basic problem. It is important, therefore, that each Company have some system of periodic analysis of absenteeism. Such a system should not only indicate the presence of any detrimental condition but also at least roughly show the reasons for the absences which in turn can be analyzed to get at the causes."

Absence records are discussed at length in the report and sample records of time worked and time absent are given. Other topics dealt with are, Absentee Analysis; and Examples of Absentee Analysis. In a concluding section of the report, solutions to Problems of Absenteeism are dealt with under the following headings: New Reasons for Absence; Community Co-operation in Combating Absenteeism; New Problems of Discipline and Increase in Illness and Fatigue.

ADJUSTMENT OF COST-OF-LIVING BONUS

General Order of National War Labour Board

ON August 4, the Dominion Bureau of Statistics having found that the cost of living index number for July 2, 1942 of 117·9 (adjusted index 117), had risen by 2·4 points over the index for October 1, 1941, of 115·5 (adjusted index 114·6), a General Order was issued by the National War Labour Board providing for the adjustment of cost-of-living bonuses already in effect and the mandatory payment of bonuses to compensate for the 2·4 points rise by employers not already paying cost-of-living bonuses to employees.

According to the General Order, which appears in full below, all firms not previously paying a cost-of-living bonus were ordered (for the first payroll period on or after August 15, 1942) to commence the payment of such a bonus in the amount of 60 cents a week for all adult male employees and all other employees receiving $25 a week or more; and 2·4 per cent of weekly wage rates to all male employees under 21 years of age and all female employees receiving less than $25 a week.

It also became mandatory, by this General Order, that employers already paying a cost-of-living bonus to increase the amount of such bonus by 60 cents a week or 2·4 per cent of weekly wage rates, provided the maximum amount of bonus paid does not exceed $4.25, per week, or 17 per cent of weekly wage rates.

The General Order of the Board follows:

NATIONAL WAR LABOUR BOARD

General Order

The Dominion Bureau of Statistics has found that the cost-of-living index number for July 2, 1942, of 117·9 (adjusted index 117) has risen by 2·4 points over the index for October 1, 1941, of 115·5 (adjusted index 114·6).

Accordingly, pursuant to the provisions of Section 34 (1) of the Wartime Wages Control Order P.C. 5963, and subject to the general provisions of the Order, the National War Labour Board orders that employers subject to the Order who are paying a cost-of-living bonus shall adjust the amount of such bonus payment, and employers who are not paying a cost-of-living bonus shall commence the payment of such a bonus, both effective from the first payroll period beginning on or after August 15, 1942, as follows:

(*a*) if payment of a cost-of-living bonus is being made pursuant to the provisions of Order in Council P.C 8253 (now superseded by P.C. 5963):

(i) for employees to whom Section 48 (iii) (*a*) of P.C. 5963 applies, the bonus shall be increased by the amount of sixty (60c) cents per week,

(ii) for employees to whom Section 48 (iii) (*b*) of P.C. 5963 applies, the percentage of their weekly wage rates, paid to them as a cost-of-living bonus, shall be increased by 2·4 points;

(*b*) if no cost-of-living bonus is being paid, the payment of such a bonus shall be commenced:

(i) for employees to whom Section 48 (iii) (*a*) of P.C. 5963 applies, in the amount of sixty (60c) cents per week,

(ii) for employees to whom Section 48 (iii) (*b*) of P.C. 5963 applies, in the amount of 2·4 per cent of their weekly wage rates;

(*c*) in no case shall the amount of a cost-of-living bonus adjusted as stated exceed a maximum of $4.25 per week to employees to whom Section 48 (iii) (*a*) of P.C. 5963 applies, and of 17 per cent of their weekly wage rates to employees to whom Section 48 (iii) (*b*) of P.C. 5963 applies;

(*d*) (1) (i) for employees to whom Section 48 (iii) (*a*) of P.C. 5963 applies now being paid a cost-of-living bonus, not pursuant to the provisions of P.C. 8253, established prior to the effective date of that Order, in an amount exceeding $4.25 per week, the amount of the bonus shall remain unchanged.

(ii) for such employees now being paid a cost-of-living bonus of less than $4.25 per week, the amount of the bonus shall be increased up to sixty (60c) cents per week, but in no case to exceed a total weekly bonus of $4.25;

(2) (i) for employees to whom Section 48 (iii) (*b*) of P.C. 5963 applies, now being paid a cost-of-living bonus, not pursuant to the provisions of P.C. 8253, established prior to the effective date of that Order, in an amount exceeding 17 per cent of their weekly wage rates, the amount of the bonus shall remain unchanged;

(ii) for such employees now being paid a cost-of-living bonus of less than 17 per cent of their weekly wage rates, the bonus shall be increased up to 2·4 points, but in no case to exceed a total weekly bonus of 17 per cent of their weekly wage rates;

(*e*) the adjustment or payment of a cost-of-living bonus calculated as ordered shall be to the nearest cent of any fractional figure;

(*f*) employers in the construction industry shall adjust the amount of any cost-of-living bonus required by paragraph (*a*) of this order only for employees in respect of whom no special bonus arrangement has been made with the approval of a War Labour Board, pursuant to the provision of the Order for the conduct of the National Joint Conference Board of the Construction Industry.

Humphrey Mitchell,
Chairman,
National War Labour Board.

Ottawa, Ontario,
August 4, 1942.

PRICE CONTROL IN CANADA DURING JULY, 1942

Coupon Rationing of Tea and Coffee—Further Control of Consumer Credit—Clarification and Amendment of Price Adjustment Policy—Price Adjustments during July—Restrictions and Simplifications

DURING the month of July, coupon rationing of sugar came into full force, and was extended, effective August 3, to tea and coffee which had been rationed on an "honour" basis since May 26, 1942. More drastic restrictions on consumer credit were introduced, effective August 1. Beef prices came under stringent control, at the same time being reduced by one cent per pound on the average during the period July 13-August 2. In order to fulfil military requirements, stocks of canned corned beef were placed entirely at the disposal of the government.

Maximum prices were established or adjusted for several products; pulpwood, shipping cartons, cotton yarn and cloth, leather for leather clothing, fuelwood in certain areas, etc. The Board continued its program of conservation and simplification with respect to many more manufacturers' products; baby carriages, galvanized steel wire strand, barbed wire, venetian blinds, certain clothing items, paper products, etc. Restrictions on retail delivery services were clarified, and similar regulations were applied to wholesale deliveries. Maximum prices, and control over specifications, supplies, etc. were established for several important used goods.

Consumer Rationing

Tea and Coffee.—To conserve shipping space and ensure an equitable distribution of existing supplies, it has been necessary to apply more stringent control over the rationing of tea and coffee. Effective August 3, coupon rationing was established, replacing the system of "honour" rationing which had been in effect since May 26, 1942. The ration is one ounce of tea per person per week or four ounces of coffee per person per week—for many consumers a considerable reduction from the allowance under the previous ration system of three-quarters of the amount of coffee and one-half the amount of tea normally consumed. Coupon rationing of tea and coffee came one month after sugar had been placed on a coupon rationing basis.

Until permanent ration books are issued September 8, the lettered coupons, marked from "A" to "E", which were placed on the temporary sugar ration cards (for use in a possible emergency), will be used for tea and coffee rationing. Each one of the lettered coupons entitles the ration card holder to purchase one ounce of tea or four ounces of coffee. All five coupons may be used at one time. Ration cards issued for children under 12 cannot be used for tea and coffee purchases. After September 8, there will be permanent coupon ration books. Restaurants, hotels, institutions, etc., receive their supplies of tea and coffee by special voucher. As in the case of sugar rationing, permanent residents of hotels and institutions will surrender their ration cards to the hotel or institution. Rationing does not affect purchases of tea and coffee by and for the Armed Forces.

The retailer must establish his right to purchase new supplies of tea and/or coffee from his supplier or suppliers by turning over to the supplier valid ration coupons equivalent to the poundage of tea and/or coffee ordered from the supplier. To compensate the retailer for the unavoidable loss in packaging tea purchased in bulk, he will be allowed a 2 per cent tolerance, and roasters of green coffee will be allowed a tolerance of 16 per cent to compensate for the shrinkage in roasting. Wholesalers may purchase bulk tea or green coffee beans by the surrender of coupons on the same basis. Special instructions have been issued to those who import tea and coffee direct.

Sugar.—The coupon rationing regulations for sugar, which came into effect July 1, were strengthened and clarified during the month. Consumers who on July 3 possessed sugar in excess of the ration allowance were ordered to turn in coupons for any surplus. On the

same day it was announced that retailers whose stocks were low would be allowed a few days to make up deficiencies in stocks without turning in coupons or vouchers to cover the quantity purchased. Meeting a difficulty experienced in farm households, the Board ruled that merchants may accept purchase vouchers from farmers' wives or other persons who are feeding harvest workers, using the same procedure as in drawing sugar for home preserving (July 15). At the end of the first two weeks of coupon rationing, the Board announced that retailers in replenishing their stocks of sugar would not be required to turn over to their wholesale supplier more than 98 ration coupons for every 100-pound bag of sugar purchased, thus allowing for the unavoidable loss of sugar incurred by retailers in repackaging. Operators of tourist homes and boarding houses catering to occasional as well as regular boarders were notified by the rationing section of the Board that their registration as sugar users would be good only for three months from the date of registration, and that their quota of renewal would be constantly revised since often the volume of trade is small or purely seasonal.

To clarify the regulations and to cover situations not fully dealt with in the previous sugar ration order a number of amendments were introduced in Board Order No. 163, effective July 17. The amending order reclassified hotels, inns, clubs serving meals, staff dining rooms and hospitals as institutions instead of public caterers. As a result, all staff, guests or inmates must possess ration cards.

The industrial use of honey has been brought under control in order to ensure an adequate supply for Canadian honey consumers, meet present needs of the United Kingdom, and prevent industrial users from outbidding wholesalers and retailers in obtaining supplies of this important sugar substitute. (Board Order 162, July 14). Industrial users may not use more honey in any quarter of 1942 than in the corresponding quarter of 1941.

Consumer Credit

During the month the Board amended the Consumer Credit Order (No. 75, Dec. 16, 1941) in several important respects (Board Order No. 161, July 23). Instead of listing the articles which were subject to a down payment of not less than 33⅓ per cent of the balance of the cash price after any allowance for trade-in, the new order extends this percentage of payment, with certain exceptions, to cover "all goods not elsewhere specifically mentioned in the schedule". The maximum credit period for clothing will be six months instead of the year previously allowed.

With respect to articles specifically mentioned, the following provisions have been made: Wearing apparel, including footwear, headgear, haberdashery, and lingerie will be subject to a down payment of one-third with no down payment less than $5.00. The minimum down payment on furniture, mattresses and bedsprings for household use will be 20 per cent instead of 10. The maximum credit period remains at 12 months. Purchasers of pianos are given a maximum of 18 months in which to complete payments with the minimum down payment not less than 20 per cent, but in no case may the down payment be less than $10. For 60 or more classes of goods listed in the order, no instalment or deposit under a contract of sale shall be less than $5 a month or $1.25 per week.

Under recent arrangements made by the Coal Administrator to encourage summer purchases of solid fuels, special terms as to payments have been made.

Price Adjustment Policy

Early in July the Board released several orders clarifying and amending its policy and procedure with respect to retail and wholesale price adjustments.

Of special importance is the Board Order dealing with the price and quality of consumer goods (Board Order No. 145, effective July 13). The Board re-emphasizes the policy that manufacturers of consumer goods must continue to produce and sell products of the same or substantially similar kind and quality, and in the same or approximately the same price ranges, as was their practice in the corresponding season of 1941. Any reduction in the proportion of goods manufactured in the lower price ranges is approved only if due to unavoidable circumstances such as inability to obtain materials, or an order of the Board, or some other government authority restricting production. Manufacturers are permitted to cut the proportion of their higher price ranges. The same principle is applied to sellers other than manufacturers.

The price ceiling cannot be evaded by marketing new or modified products or changing trade descriptions. Products which, due to unavoidable circumstances, are substantially different in kind or quality from lines on the market, must have their maximum prices established or approved in writing by the appropriate administrator with the concurrence of the Administrators of Retail and Wholesale Trade and countersigned by the Chairman of the Board before such goods are sold, and such price must be appropriate in relation to the price and relative value of comparable goods. All this reflects a determined

policy on the part of the Board that there should be, in general, no further increases by manufacturers or importers in the prices of finished consumer goods.

Board Order No. 144, revoking Board Order No. 91, revises and consolidates procedures for the adjustment of retail and wholesale prices with a view to further strengthening price control. Retail prices which are proven to be abnormally low in relation to the prices charged by other retailers for consumer goods may be adjusted, but only in writing by the Administrator of Retail Trade with the countersignature of the Chairman of the Board. The Administrator of Wholesale Trade may grant written authority for increases in maximum prices on sales at wholesale in specific cases where he is satisfied that the wholesaler's price is abnormally low in relation to the prices charged by other wholesalers for similar goods. The Administrator of Wholesale Trade may also grant general or limited authority for establishing maximum whosesale prices at fair and reasonable levels higher than the respective maximum prices pursuant to the Wartime Prices and Trade Regulations, provided such higher prices are accepted voluntarily by buyers who agree to absorb the increase.

Another order of the Board revoking Order No 123, April 7, 1942, provides that any net reduction in production costs subsequent to the base period or subsequent to the last authorized variation in maximum selling prices must immediately be reported by manufacturers to the appropriate administrator. (Board Order No. 153, July 13). Unless the reduced amount is insignificant, the Administrator will vary the maximum selling price by such an amount as he considers fair and reasonable. If the product is one on which a subsidy is being paid, the person receiving the subsidy is to report the facts to the Commodity Prices Stabilization Corporation.

Board Order No. 154 (July 13), amending Order No. 115 (March 17, 1942) strengthens the enforcement provisions with respect to seasonal goods. The amendments do not alter any arrangements made with respect to the specially designated seasonal goods set forth in the Schedule to Board Order No. 115 (see Labour Gazette, May, 1942, page 567).

Price Adjustments During July

Beef.—More stringent control of beef prices was introduced in an order fixing maximum wholesale prices for 28 different cuts of beef—the result of careful investigation of price ranges in each section of Canada over a period of time. They apply to the period from July 13 to August 2, inclusive, and to the whole of Canada, but vary in the 15 zones defined by Board Order No. 149 of June 24. That Order prescribed maximum prices at which processors and wholesalers might sell carcasses, sides or quarters of beef in the 15 zones across Canada, and provided that the ceiling prices for cuts would be those fixed from time to time by the foods administration. The order also provided for seasonal variations in the price of beef through periodic decreases between July 13 and November 30, 1942. Under Administrator's Order No. 286, packers were obliged to reduce the price of beef by one cent a pound, commencing on July 13.

The maximum prices listed in Administrator's Order No. 286 apply to beef of the highest quality in each class designated, and beef of lower quality must be sold by processors and wholesalers "at reasonable reductions from such prices". Retailers are prohibited by Board Order No. 149 from paying more than the maximum wholesale price, and their selling prices to consumers are not, on the average, to exceed the average delivered cost of carcasses, sides, quarters or cuts, plus whatever markup they used in the basic period. Retailers were allowed one week before basing their normal markup upon the new schedule of prices in recognition of a trade practice with respect to storage.

A further seasonal reduction in maximum wholesale prices of beef averaging one cent per pound, for the period August 3 to 23 was announced July 30 (A 309, July 28).

Members of the beef advisory committee representing eastern and western cattle producers and dealers met in Ottawa towards the latter part of July to assist the Board in assuring a continuous flow of finished beef throughout the year for Canadian consumers. A major problem facing Wartime Food Corporation, established in June to buy and sell cattle for export and domestic markets when necessary, was the supply of feeder cattle for the feed lots in Canada, both east and west.

Fuel.—Maximum prices were established for fuelwood sold in the cities of Toronto and Hamilton, Ontario (A. 312, July 28). This makes a total of twenty-four orders fixing fuelwood prices for different areas in Canada. The grading of coal mined and sold in the province of Alberta has been specified in an order of the Coal Administrator which should provide a basis for effective price control and ensure protection to the consumer (A 289, July 11).

Knit Goods.—Manufacturers' maximum prices for new style knit goods must be fixed by the Administrator of Knit Goods with the concurrence of the Administrators of Wholesale Trade and Retail Trade (A. 293, July 14).

Every manufacturer of knit goods must submit to the administrator a statement showing particulars of all new style knit goods being manufactured, details of cost, the different materials and the proportions of such materials used, and the proposed selling price of each kind. A wholesaler may sell new style knit goods at prices not exceeding laid down cost price plus his normal markup, the markup to be not greater than 20 per cent of the wholesaler's selling price. Retail prices are not to exceed laid down cost price plus the retailer's normal markup, such markup to be not greater than 35 per cent of retailer's selling price.

Intermediate Price Adjustments.—A number of price adjustments were arranged at the manufacturers' and/or wholesalers' level, due in some cases to higher costs and in other cases to the introduction of new or standardized lines.

Maximum prices were set at which any producer in Saskatchewan and the districts of Kenora and Rainy River in Ontario may sell pulpwood. (A 299 and A 298, July 16). Prices at which operators may sell pulpwood in these areas for consumption in Canada will be fixed by the timber administrator, but the price so fixed will not exceed maximum prices to producers by more than 15 per cent.

Maximum prices to manufacturers of shipping cartons in British Columbia have been established in an administrator's order made necessary because of the introduction of several standardized grades of cartons not produced during the basic period (A 290, July 11). The maximum price of tin, per pound, has been established for specified grades and quantities processed and sold (A 285, July 7).

Manufacturers' prices for cotton yarn and cloth have been reduced to the highest lawful price established during the month of February, 1941, to enable secondary manufacturers and distributors of textile articles using cotton yarn and cloth to sell at or below ceiling prices (A 303, July 21). The schedule of maximum prices fixed in March, 1942, for leather sold by tanners for use in the manufacture of leather garments has been subjected to minor revisions (A 318, July 30, replacing A 62, March 26, 1942).

An order of the Used Goods Administrator provided that used structural steel is to be sold at basic period prices but in no case is the price, f.o.b. vendor's shipping point, to exceed 4 cents per pound for 500 pounds or less, or 3½ cents per pound for sales of more than 500 pounds (A 296, July 16). With respect to used machine tools, used sheet metal working machines and used woodworking machines, maximum selling prices are to be not higher than specified percentages of the prices of new goods, the percentages varying according to the condition of the machines and the areas in which they are sold. (A 295, July 15). At the time of sale and delivery of any rebuilt machine, the seller must deliver to the purchaser a written guarantee that for a period of 60 days he will repair and/or replace at his own cost any part found to be defective or worn to the extent that the efficiency of the machine is impaired.

Restrictions and Simplification

Manufacturers were reminded by the Metals Administration for the Board that after the end of July no metal (except gold and silver), not even stocks of metals or alloys on hand, may be used in producing any of the 190 articles listed in previous conservation orders. (See Summary, LABOUR GAZETTE, June and July, 1942.)

Manufacturers of baby carriages have been limited to a maximum of four styles of folding baby carriages and to one style of perambulator for the purpose of conserving materials needed in war industries. (A 287, July 9.) The manufacturer of galvanized steel wire strand must conform to specifications of sizes, grades of steel and quality of galvanizing set out in Administrator's Order No. 294. (July 14.) Types of barbed wire which may be made are also restricted to specified sizes. (A 264, July 27, amending A 168, June 30, 1942.) The manufacture of venetian blinds has been further simplified with a view to conserving materials and reducing costs (A 305, July 24).

After three months experience with control of retail delivery services, the Board has altered the original order with a view to allowing retailers to continue making necessary deliveries and also meet the primary purpose of conserving gasoline, rubber and man-power. Retailers are still prohibited from delivering an order of goods under $1.00 in value. Added to the list of exceptions are goods sold to fill medical doctors' prescriptions.

A retailer may deliver goods to replace goods delivered in error or omitted by the retailer from a customer's previous order. Retailers may deliver orders to one address where several customers have combined to bring the amount of their joint order up to $1 or more. The time allowed for exchanges and refunds has been extended, with certain exceptions, to 12 clear business days. Exchanges but not refunds, are permitted when goods are found to be incorrect in size or were sold for the purpose of a gift. The only

goods which a retailer can sell on approval are individual items of "house furnishings" priced at more than ten dollars, collectors' postage stamps, and sheet music.

Restrictions on wholesale deliveries have been made in an order effective August 3 (A 292, July 14.) Deliveries other than perishable goods are limited to three regular deliveries a week on alternate days over any particular route or in any specific area. Individual wholesale orders amounting to less than $3 may not be delivered. The order requires wholesalers delivering in or to large cities to prepare delivery plans and file them with the administrator of services.

To conserve the life of existing trucking equipment, an order was passed prohibiting private trucks or trailers, with certain exemptions, from operating more than 35 miles from their registered addresses without a special permit (A 314, July 29). "Generally speaking", the administrator stated, "permits.... will not be issued where it appears that there are public transportation facilities available which are capable of handling the movement, and the private vehicle owner is unable to satisfy us that capacity or near capacity load will be carried both ways".

The promotion of beer sales by distributing as premiums any articles which advertise the brewers' names or their products or by the supplying of equipment to beverage rooms free of charge has been prohibited starting September 1. The order also discontinues the use of containers which designate or refer to any particular season, holiday or other special event or occasion. (A 313, July 28.)

The number of rubber printing dies used for printing solid fibreboard shipping containers will be reduced by 75 per cent as the result of an agreement among the users, regularized as an order, providing for free interchanging of printing dies (A284, July 2).

Standard sizes and specifications of caliper and strength of corrugated and fibreboard shipping containers for macaroni and other related food products have been fixed with a view to conserving essential materials and reducing costs (A 301, July 18.) To conserve used baskets, hampers and boxes, an order has been passed prohibiting any person destroying or throwing away baskets, hampers, or orange boxes without the consent of the administrator of used goods (A 270, July 2). Every person is required to return a basket, hamper or orange box to an authorized dealer. Prices at which collectors may sell such containers to an authorized dealer are set out in the order and dealers' prices are also fixed. The sale of livestock feeds to farmers in bags or packages has been standardized as to content weight and style of package in all parts of Canada (A 306, July 27).

With respect to ladies' felt hats, processors of stiffened hoods are restricted to supplying not more than 50 per cent of the number of hoods supplied to each manufacturer in the corresponding period of 1941. Colours in wool felt hoods are also restricted. The purpose of the order is to conserve shellac for war use (A 307, July 27). Not more than eight colors and shades, including Air Force blue and khaki, may be used as body colours in the manufacture of any one line or style of knitted outerwear (A 315, July 29). Wholesalers, jobbers or manufacturers dealing in cloth made of wool, woollen or worsted mixture are not allowed to sell any single length or piece of cloth for any men's or boys' suit in any greater lengths than $3\frac{5}{8}$ yards in double width or $7\frac{1}{4}$ yards in single width. Allowance is made for greater yardage for oversized persons (A 316, July 30).

To conserve more vital materials necessary for war production and to effect simplifications and economies within industry, the administrator of oils and fats limited the number of colours and shades which paint and varnish manufacturers may make, thus reducing the number of colours and shades from 60 to 70 per cent of pre-war production. (A 304, July 23, revoking A 41, March 7, 1942.) Manufacturers of cosmetics have been limited to fewer varieties, shades and colours for each line of products—nail polish, lipstick, powder, etc. (A 302, July 22.) By reducing costs, the restrictions will assist the manufacturers in maintaining their ceiling prices. The quantity of shortening which may be manufactured has been limited to 80 per cent of the quantity made by each manufacturer during the corresponding month of 1941. The amount of vegetable oil which may be used in shortening has also been restricted (A 319, July 31).

Following the "freezing" of stocks of canned corned beef on June 9th a supplementary

order, effective July 9th (A 288), required retailers who had in stock one case or more of canned corned beef to turn it in to a distributor to hold it for dispostion by the Board.

Federal tax.—Merchants selling goods which are subject to the retail purchase tax imposed by the recent federal budget are required by an order of the Board, dated July 14, to show by price-tag or otherwise the price of such articles exclusive of the tax (Board Order No. 159, July 14). Because furs are not under the price ceiling, the order does not apply to them.

Regarding the July 1 Cost-of-Living Index

The Bureau of Statistics announced that the cost-of-living index for July 1 stood at 117·0, an increase of 1·2 over the June figure of 115·8. This makes a net increase of 2·4 points as compared with October 1st, 1941, and the National War Labour Board announced that a corresponding adjustment in cost-of-living bonuses would become effective August 15th.

Of the increase in the cost of living since October, 90 per cent was due to increases in food prices, and beef and potatoes accounted for 87 per cent of the increases in food prices. These were, in part, seasonal movements which were aggravated this year by special circumstances. Beef prices, however, have fallen from their July 1 peak in accordance with the seasonal schedule of maximum wholesale prices issued by the Board; and as a result of an increase in supply in the late Summer, potato prices are expected to decline seasonally when the new crop becomes available in adequate quantities. The Board thus expects that some decline in the index will occur in the next few months.

Suggested Standards for Industrial Safeguards

The Division of Labour Standards, United States Department of Labor, has issued special bulletin No. 7 entitled *Suggested Standards for Industrial Safeguards.*

In an introduction it is stated that a special Committee of American Society of Safety Engineers, having studied 1,000 industrial accidents, found that 20 per cent of accidents result from machine fault, another 20 per cent from personal fault, and the remaining 60 per cent from a combination of the two.

The material presented in the bulletin has been compiled by the Division of Labour, which, in its capacity as clearing house for information on matters relating to the safety and health of wage earners, reviews rules and regulations of various States and presents material which might prove useful to factory inspectors and safety engineers interested in seeing that dangerous machines are properly safeguarded.

It is one thing to say "This machine should be safeguarded," and another to explain exactly *how* it can be effectively guarded, the report states. The man who can offer practical suggestions as to how the safeguarding may be accomplished is much more likely to obtain results than the one who merely points out that a safeguard should be provided.

The drawings presented in the compilation illustrate the standards in effect in one State of the Union. They are practical and workable standards; the safeguards are effective. The explanatory material consists of the actual rules and is presented for the purpose of supplementing the drawings. The standards set forth have no legal effect, of course, save in those States which have embodied them into rules and regulations.

The compilation is not complete. However, the Division expects to add to it from time to time, to the end that eventually the book may be a complete guide to the person interested in, or charged with the duty of obtaining, adequate and effective safeguards for industrial hazards.

Copies of the bulletin (price 65 cents) may be obtained from the United States Superintendent of Documents, Washington, D.C.

Immigration to Canada During First Six Months of 1942

The effect of the war on immigration to Canada is reflected in statistics covering the first six months of 1942, issued by the Immigration Branch, Department of Mines and Resources. During the six months' period, 3,707 immigrants entered Canada.

The decrease in the numbers entering the Dominion is most marked in the "other races" classification of immigrants. There was a reduction of 71·2 per cent in this group, compared with those in this group entering in the same period of 1941. There was a reduction of 22·8 per cent in the number of immigrants in the Northern European races classification and a 10·8 per cent decrease in each of the United States and United Kingdom groups.

Occupationally, the mechanics classification accounted for 411; trading class, 339; female domestic servants, 214; labouring class, 198; farming class, 182; mining class, 21; and other classes, 2,342.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for July, 1942

A TOTAL of 15,680 individuals were attending War Emergency training classes throughout the Dominion on July 31st, 1942. This total represents a small increase over the number receiving training on June 30th when the total enrolment was 15,006. The total number of persons receiving training in Industrial pre-employment classes at the end of July was 4,918; this total being practically the same as that for June 30th, when 4,910 individuals were attending industrial pre-employment classes. In the part-time Industrial classes being conducted in Technical and Vocational schools, there was an enrolment of 1,922 trainees on July 31st, this total being considerably higher than the total on June 30th when 1,581 trainees were receiving instruction. In the R.C.A.F. pre-enlistment classes, there was practically no change as between the totals in training on June 30th and July 31st. On July 31st there was an enrolment of 4,677 in the R.C.A.F. classes, while the total for June 30th was 4,664. In the Army and Navy classes there was a small increase in the numbers receiving training on July 31st as compared with the total for June 30th. On July 31st, the total number attending Navy and Army classes was 2,923 as compared with 2,694 on June 30th. Vocational training was being given on July 31st to 106 men who had been honourably discharged from His Majesty's Forces, while the total receiving similar training on June 30th was 121.

During the month of July, 1942, a total of 7,543 new trainees was enrolled in the Technical and Vocational schools. Of these 3,488 entered the full-time industrial classes while 1,223 entered the part-time industrial classes. The R.C.A.F. pre-enlistment classes received 1,350 new trainees, while 1,422 commenced training in the Navy and Army classes. Under the Rehabilitation Plan 60 new trainees were enrolled during July.

In the Industrial pre-employment classes 2,805 students completed their training and were placed in employment during the month. In the Rehabilitation classes 55 men who had been honourably discharged from His Majesty's Armed Forces completed their Vocational training and secured employment during July.

A total of 39 trainees left the Industrial classes in order to enlist with the Armed Forces, while in the R.C.A.F. classes, 1,185 trainees completed their training and were enlisted.

The number of women in training although included in the totals given in Table No. 1, are also shown separately in Table No. IA. Of the 3,488 individuals who commenced training during July in the full-time pre-employment classes 1,357 or 36 per cent were women. Of the 1,357 new women trainees 1,023 or about 75 per cent were enrolled in the Province of Ontario. British Columbia accounted for 117 new women students, while Quebec reported an enrolment of 70, Saskatchewan 88, and Alberta 59. A total of 1,390 women in the full-time Industrial classes completed their training and were placed during July. On July 31st, there were 1,504 women training in the full-time Industrial classes.

The numbers being trained in classes held in approved plant schools as at July 31st are shown in the following table. The totals are also given for the part-time Industrial classes carried on at centres other than Technical or Vocational schools.

TRAINING IN INDUSTRY

(Subject to Revision)

An interesting development in the establishment of an approved plant school occurred recently. A manufacturer of aircraft components has established a school plant for the training of selected employees of sub-contractors—in this case key employees from furniture factories which are preparing to undertake sub-contract work from the original contractor.

When fully trained in the contractors school these key employees will return to their own companies and will, in turn, set up plant schools in their own organizations to train other furniture factory workers in aircraft work. This is the first instance in Canada of a peace-time industry being converted to war production under the Government-sponsored plant school programme.

59212—44

RESERVE OF LABOUR AMONG CANADIAN WOMEN

IN a review of the reserve of labour among Canadian women, the Dominion Bureau of Statistics reports that of 1,227,876 married women from 15 to 44 years of age, only 48,073 or 3·92 per cent were gainfully occupied in 1931.

Referring to this potential labour supply, the Bureau states that "there is abundant evidence that Canada's sources of labour supply among men are rapidly approaching depletion. Employment is at the highest level in the country's history, approximately 5,000,000 persons of a population of 11,500,000 being in the armed services or in civilian occupations. Enlistments in the Army, Navy and Air Force, numbering around 500,000 and the employment of some 800,000 workers in producing munitions of war have contributed to an acute shortage of man-power. A National Selective Service plan has been established to mobilize Canadian labour for the most effective prosecution of the war and non-essential production is being progressively curtailed."

The report then summarizes statistics of Canada's woman-power as follows:

Since future accretions to the nation's labour force must come mainly from the ranks of women, a stock taking of Canada's woman-power is, at the present time, extremely important. An attempt to throw some light on this problem, with the data at present available, is presented herewith.

Gainfully occupied females in Canada, in 1931, numbered 665,859. The National Registration of August, 1940, showed 958,000 gainfully occupied females. At March 31, 1942, there were 655,096 females registered under the Unemployment Insurance Act. Allowing for persons in non-insurable occupations, this would indicate a total of around 1,200,000 gainfully occupied women at the present time. Of these more than 6,000 are in the armed forces.

For the alleviation of the man-power shortage interest centres chiefly upon the women not gainfully occupied. As the total female population, according to the 1941 Census, was 5,594,062 these would number around 3,300,000, excluding children under 10 years of age. To estimate the availability of labour supply in this total, the age composition, conjugal condition, geographical location, family responsibilities, etc., etc., must be considered. Such detailed data are available, at present, only for 1931 but they provide at least a rough basis for conclusions regarding the picture in 1942.

The number of females, not gainfully occupied, was, in 1931, 3,240,663 or 83 per cent of the female population 10 years of age and over. Of these 1,141,528 were single, 1,868,639 married, and 230,220 widowed or divorced. Single women are the first to be absorbed in a rapidly expanding war machine. Young women of 15-34 years are most favoured by employers although, for certain types of work, those in the 35-44 and even in the 45-54 groups are suitable. In 1931 there were in Canada 516,082 single women, aged 15-34 years, not gainfully occupied. In the 35-44 age group there were 28,596 and the 45-54 age group 23,654.

Single Women

Single women 15-44 years of age in rural areas, in 1931, numbered 381,421 and in urban areas, 653,008. While the increasing farm labour shortage exerts considerable pressure to keep young women on the farm, single women, on the whole, form a highly mobile group which can readily shift from one part of the country to another as employment becomes available. It is fairly certain that at this time (middle of 1942) heavy inroads have been made upon the single women labour pool.

While widowed and divorced women follow fairly closely the same pattern as single women in regard to employment, this source of labour supply is comparatively small. There were only 21,954 widowed and divorced women, aged 15-44, not gainfully occupied in 1931.

Married Women

Of 1,227,876 married women, 15-44 years of age, only 48,073 or 3·92 per cent were gainfully occupied in 1931. If the war is of long duration, with the absorption of more and more men into the armed forces on the one hand, and, on the other, an increasing tempo of war production, this source will have to be heavily drawn upon. The ranks of married women under 35 years of age, not gainfully occupied, which, in 1931 numbered 678,676, contain a considerable number of recent workers still skilled in their former occupations.

Of married women, 15-44 years of age, in Canada in 1931, 533,354 were in rural and 696,400 in urban areas. The family responsibilities of rural married women, coupled with industrial employment can be secured from the married women, 15-44 years of age, in rural areas. However, the married women in this age group in urban localities provide a labour pool practically untapped. In this connection a sample investigation showed that, of 993 women listed as homemakers at the National Registration of 1940, 87 had acquired insurable wage-earner status by July 1, 1941. While the sampe is too small to be reliable, it would indicate that of 2,285,000 women listed

as homemakers in August, 1940, only from 54,000 to 68,000 had been drawn into the ranks of industrial workers by July 1, 1941.

Mobility

The employment of married women is, of course, hampered by the fact that ,as a labour group, they are extremely immobile. Certain information on families provided by the Census is of interest in this connection. There were in Canada, in 1931, in urban localities, 283,244 families of two or more persons without children. Unfortunately, the age composition of the wives in these families is not known, a defect which will be remedied when the 1941 Census data become available. Of 922,705 urban families with children, 33 per cent had one child only, while 75 per cent had two children or less. Of the 304,802 families with one child, in only 109,831 cases or 36 per cent of the whole, was the child under 7 years of age.

In connection with the problem of the immobility of married women workers the degree of concentration in the larger urban centres is important. Of the 283,244 urban families without children in 1931, 159,373 or 56 per cent were in localities 30,000 and over while 58 per cent of the families with one child and 57 per cent of those with two children were similarly situated. It is in these urban centres that day nurseries, community kitchens, laundries, etc., can be most easily provided.

WORKMEN'S COMPENSATION IN ALBERTA AND BRITISH COLUMBIA

Annual Reports of Provincial Boards

Alberta

THE total number of accidents reported during 1941 to the Workmen's Compensation Board of Alberta was 16,928 compared with 14,632 in the previous year, an increase of 2,296. Of the total number of accidents 97 were fatal, the greatest number of fatal accidents reported to the Board in any one year. Permanent disability resulted in 110 cases and temporary disability in 16,721.

Total revenue accruing to the Board in the year ended December 31, 1941, was $2,403,570.50 and total expenditures amounted to $2,310,847.45, leaving a balance of revenue in excess of expenditure amounting to $92,723.05. The largest revenue item was that of assessments amounting to $1,788,898.21, followed by medical aid contributions, $441,180.92; interest and investment earnings, $173,457.12, and sale of acts, $34.25. Total compensation amounted to $772,805.69; cost of medical services, $316,273.32; provision for disasters, $96,559.30; general expense including expenditure re mine rescue cars and stations, $207,425.65.

Statistics for the year 1941 reviewed by the report may be summarized as follows: Number of employers within the scope of the Act as at December 31, 1941, 6,497; accidents reported during the year 1941, 16,928; accidents and claims not finally disposed of as at December 31, 1940, 1,927; claims disposed of by award of pension or payments of compensation, 7,755; claims disposed of by payment only of account for medical aid, 5,266; accidents disposed of for which no application for compensation was received, 92; accidents disposed of on which no compensation was due, 3,503; claims on which further payments have to be made, 1,446; accidents awaiting further reports and on which no payments have been made, 793.

British Columbia

During 1941 there was an increase in the number of accidents reported to the Workmen's Compensation Board of British Columbia, a total of 46,496 being reported during the year compared with 38,487 in 1940. Of these, 171 were fatal. In addition, 2,400 accidents of a trifling nature were reported which did not result in any time-loss compensation, and no medical attention was required, first aid only being rendered.

The percentage of accidents resulting in three or more days loss of time arose out of various industries is as follows: Lumber industry, 47 per cent; general manufacturing and delivery classes, 11; metal-mining, 9; construction, 9; servicing and repairing, 6; railroading groups, 3; coal-mining, 3; navigation, 3; fishing, 3; and all other classes, 6.

Revenue of the Board during 1941 amounted to $7,204,264.02, of which $4,382,647.54 was collected from employers on account of 1941 payroll assessments. Medical aid contributions amounted to $761,324.97; assessments collected on account of 1940 and prior years totalled $479,594.91; and medical aid dues from workmen, $354,864.79. The balance of the revenue accruing to the Board in 1941 amounting to $622,587.58 was on account of interest on investments, premium on United States funds and profits realized on sales.

Disbursements during 1941 totalled $6,278,874.78, the major component items being: compensation to workmen, $2,250,544.73; pension payments, $1,480,289.51; medical aid, $935,422.35; investments purchased less sales, $1,288,510.70; general administrative expense, $157,963.24 and employees' superannuation past-service payment, $166,144.25. A cash balance of revenue over expenditure in 1941 of $925,389.24 therefore resulted.

LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA IN 1942

DURING the Session of Parliament which opened on January 22 and closed on August 1, 1942, Acts were passed to provide for vocational training, for reinstatement in civil employment of persons who have served in His Majesty's Forces and for assistance to war veterans to settle upon the land. The Income War Tax Act was amended to raise the tax on salaries and wages.

Reinstatement in Civil Employment

The Reinstatement in Civil Employment Act, 1942, which gives legislative effect, with a few changes, to an Order in Council issued in June, 1941, requires employers of persons accepted for certain war services to reinstate such persons in employment at the termination of that service and, as far as practicable, under conditions not less favourable than those which would have been applicable to them had they remained in their employment. The Act applies to persons on active service in the present war in the naval, military or air forces (including the Canadian Women's Army Corps), to members of the Corps of (Civilian) Canadian Fire Fighters for Service in the United Kingdom, to persons called out for training or service under the National Resources Mobilization Act and to merchant seamen who are British subjects, citizens of and resident in Canada, and who were engaged on any vessel, other than an enemy vessel, in coastwise waters or in waters outside the territorial limits of Canada, and after that service for a continuous period of at least six months including layoffs and after discharge or release from such service or other termination of it.

"Employer" is defined as a person carrying on any undertaking in which the person accepted for war service had been employed for at least three months immediately prior to the date on which he was so accepted or in which on that date he had employee status or a recognized position by reason of an agreement between one or more employers and one or more trade unions or groups of employees. "Employer" also includes a person carrying on the undertaking with which had been amalgamated that in which the person accepted for service had been employed or in which it was comprised when the employee's war service began.

The right to reinstatement is subject to established rules of seniority in the employer's establishment, with retention of seniority rights during the employee's period of service in the Forces, or, in the absence of such rules, to preference according to dates of first employment in the employer's service with consideration to continuity of employment in that service. In determining the employee's right to pension or other benefits his war service counts as service with the employer.

In proceedings against him for failure to reinstate an employee it is held to be a defence to the employer if he proves that the employee did not apply for reinstatement within three months after discharge in Canada from war service or from hospital treatment following such discharge or within four months if he was discharged overseas; that having been offered reinstatement the employee failed without reasonable excuse to present himself at the time and place notified to him by the employer; that on account of a change of circumstances other than the engagement of some other person to replace him it was not reasonably practicable to reinstate him or that his reinstatement in an occupation and under conditions not less favourable than those which would have been applicable to him had he not been accepted for service was impracticable and that the employer has offered to reinstate him in the most favourable occupation and under the most favourable conditions reasonably practicable; that the employee was physically or mentally incapable of performing work available in the employer's service; that he was employed to take the place of an employee who had been previously accepted for war service and that such employee had been reinstated.

An employer who has reinstated an employee may not discharge him without reasonable cause and in proceedings for violation of this provision in cases where the employment was terminated within six months of reinstatement the onus is on the employer to prove that he had reasonable cause for discharging the employee. An employer is also forbidden to discharge an employee in order to evade the obligations imposed by the Act or in the expectancy that the employee may be accepted for war service and in proceedings for violation of this provision if the court considers that there are reasonable grounds for believing that the employment was terminated in violation of it the employment is to be deemed to be so terminated unless the employer proves that the discharge of the employee was for a reason unconnected with such obligations or such expectancy.

When a contract of apprenticeship is revived or a new contract made in a designated trade between the former employer and an apprentice discharged from war service, allowance must be made for any instruction relevant to such trade received by the apprentice while serving in the Forces and the relationship of master and apprentice is to be deemed

to be that of employer and employee for the purposes of the Act.

The Act does not interfere with agreements between employers and their workmen by which the former undertake to restore to employment those who enlist for war service provided they are not less favourable to the employees than the provisions of the Act, subject to such interpretation as may be mutually agreed upon.

An employer who fails to reinstate any employee or who discharges an employee contrary to the provisions of the Act is liable on summary conviction to a fine not exceeding $500 and in addition is to be ordered by the court to pay to such employee an amount not exceeding twelve weeks' remuneration at the rate which he was receiving when accepted for war service. The Minister designated by the Governor in Council to administer the Act may, where he considers the circumstances warrant it, institute proceedings on behalf of a former employee without cost to such employee.

The Governor in Council may make regulations for carrying out the purposes of the Act, and may prescribe penalties for their violation.

Vocational Training

The Vocational Training Co-ordination Act, 1942, in force as of April 1, 1942, repeals the Vocational Education Act, 1931, which provided for grants to the provinces to assist vocational education, but under which no grants were made. The new Act defines "vocational training" as any form of instruction to fit any person for, or increase his skill and efficiency in, gainful employment, including employment in agriculture, forestry, mining, fishing, construction, manufacturing, commerce or any other primary or secondary industry. The Minister of Labour is authorized to undertake projects to provide such training to fit persons for employment for any purpose contributing to the efficient prosecution of the war, whether in industry or in the armed forces, or contributing to the conservation or development of the natural resources of Canada which are under the control of the Dominion Government, to fit for gainful employment former members of the Canadian forces, or former members of any other of His Majesty's forces who at the time of enlistment were domiciled in Canada, persons approved for training by the Minister of Pensions and National Health and persons whom the Unemployment Insurance Commission has directed to attend a course of training as provided by the Unemployment Insurance Act.

The Minister of Labour may also enter into an agreement with any province to provide financial assistance for vocational training projects undertaken in the province for any of the purposes set forth above, for the continuation of projects carried on under the Youth Training Act, 1939, for the development and carrying on by the province of any project recommended by the Advisory Council which is to be appointed under the Act, to provide vocational training for apprentices or supervisors in any industry, and for the development and carrying on after the war of vocational training on the secondary school level. Under agreements respecting the youth training projects, development of natural resources, training of apprentices and supervisors, and vocational training in secondary schools, the percentage of the cost of the project, including the cost of the training facilities, which is paid by the Dominion may not exceed fifty per cent. The Minister is also empowered to undertake and direct research work and to make available information relating to vocational training.

A Vocational Training Advisory Council is to be appointed by the Governor in Council and is to consist of a Chairman and not more than sixteen members including an equal number of representatives of employers and employees with representatives of such other groups and interests as the Governor in Council may determine. The Chairman and members are to hold office for three years, except in the case of the first appointees and those chosen to fill casual vacancies whose term of office is to be fixed by the Governor in Council. The Council may make rules for regulating its proceedings and providing for the delegation of any of its duties to special or standing committees of its members. Members of the Council are to serve without salary but are to receive actual travelling expenses incurred with the Minister's approval and an allowance of $10 for each day of necessary absence from home in connection with the work of the Council. The Minister may refer to the Council, for investigation and report, any questions relating to the operation of the Act.

The Act further provides for the appointment of a supervisor of training and other officers and employees, for the making of regulations by the Governor in Council and for the submission of annual reports to Parliament.

Land Settlement of War Veterans

The Veterans' Land Act, 1942, which provides for financial assistance to war veterans in settling on the land, defines "veteran" to include any person who, during the present war, has served in the naval, military or air forces of Canada, or in any of His Majesty's forces if at the time of enlistment he was ordinarily resident in Canada and who has

served in a theatre of war or has served for at least twelve months in parts of Canada not designated as a theatre of war; any person who is in receipt of a disability pension and has been honourably discharged or permitted to retire from service; and any person who is a British subject ordinarily resident in Canada at the outbreak of war and who is receiving a pension for disability incurred while serving on a ship during the war.

Provision is made for the appointment of an official to be known as the Director, the Veterans' Land Act, who is to be responsible only to the Minister of Mines and Resources, and to have power to acquire and dispose of land, buildings, stock, equipment and other property. The Director may contract with any veteran who is certified to him to be qualified to benefit under the Act for the sale to such veteran of land and improvements, building materials, live stock and equipment up to a total cost to the Director of $4,800, of which $3,600 is the maximum allowed for land, improvements and building materials and $1,200 for live stock and equipment. There is no limit on the cost price of the land, however, if the veteran is in a position to pay all costs in excess of $3,600. The veteran must make a down payment equal to 10 per cent of the cost of land, improvements and building materials up to $3,600 plus the entire cost price of any that are in excess of that amount. The balance, which is payable over a term not exceeding twenty-five years on the amortization plan with interest at 3½ per cent, is to be a sum equal to two-thirds of the cost of the land, improvements and building materials. Thus, the live stock and equipment are not sold to the veteran but placed in his custody for his use. At the discretion of the Director, however, the terms of payment may be varied, provided the maximum repayment period is not exceeded. A veteran may not sell the land or chattels or both within ten years of the making of the contract except upon payment of the total outstanding cost to the Director with interest and other charges and he may sell after that time only if he has complied with the terms of his agreement for the ten-year period.

Where the Director considers any veteran qualified to engage in commercial fishing he may make a contract for the sale to such veteran of land and improvements, building materials and commercial fishing equipment up to the same amount and on the same terms as farm land, stock and equipment.

The Director may make loans to a veteran not exceeding in the aggregate $3,200 to enable the discharge of encumbrances on farm land owned and used by him as such, for the purchase, subject to the approval of the Director, of live stock and farm equipment, and for the making of permanent improvements. Such loans may not exceed in all 60 per cent of the value of the land, advances for the purchase of live stock and equipment being limited to 50 per cent of such value with a total of $2,500. These loans are to constitute a first charge on the land on which they are made, are to be secured by first mortgage and repaid on the same terms as balances due on farms purchased under the Act, or may be repaid in full at any time without notice or payment of bonus.

A veteran may be required to insure any property in respect of which he is indebted under the Act and if he fails to do so the Director may insure it and recover the amount of the premium with interest at 3½ per cent. Similarly, the Director may pay taxes on such property if the veteran defaults and recover the amount with interest.

The Act provides for the placing of veterans with selected farmers for practical instruction and for supplying instructors and inspectors to assist them. For this purpose the Director may arrange with Dominion and provincial departments, extension departments of Canadian universities and recognized agricultural schools and colleges.

Where a veteran defaults in payment of an instalment or in complying with any other terms of an agreement, the Director may after 30 days notice, cancel such agreement and repossess the property. Before taking such action, however, he must, after notifying the veteran of his intention, refer the question to a provincial advisory board of the province in which the land is situated. Such a board is to be appointed for each province by the Governor in Council and is to consist of three members of whom one is to be nominated by the Canadian Legion and the Chairman is to be a county or district court judge of the province in which the board operates. Where an agreement is cancelled and the property resold, any surplus after allowing for the cost price outstanding, interest and expenses of taking over and resale is to be paid to the veteran. Where the Director is satisfied that no surplus will be realized on the resale, a refund of part or all of his down payment may be made to the veteran if the Director is satisfied that the property did not deteriorate owing to wilful neglect of the veteran or that the veteran's failure is due to his physical disability or illness in his family or a general unfitness to farm and that as a consequence the veteran is in needy circumstances.

Mail, registered or not, posted in Canada addressed to the Director or any of his officers at his headquarters at Ottawa is to be carried free, except by air mail. Officers, agents and

employees of the Director are forbidden under penalty to purchase, acquire or sell land which the Director is authorized to deal with or to act as agents for any person so doing or to take a commission in connection with such transaction.

The Governor in Council is authorized to appoint regional or provincial committees to advise the Director as to qualifications of veterans, selection of lands and other matters and the Director, with the approval of the Governor in Council, may make regulations prescribing the number of members and the composition of each committee and the term of office, remuneration and duties of members. Provision is made for agreements with provincial governments for the settlement of veterans on provincial lands, for the making of regulations by the Governor in Council and for an annual report on operations under the Act to be laid before Parliament.

Income Tax

Amendments in the Income War Tax Act abolish the National Defence Tax, first imposed in 1940, and provide for an income tax which is divided into two parts—a normal tax and a graduated tax. The normal tax is 7 per cent for persons with dependants whose incomes exceed $1,200 a year and for persons without dependants whose incomes are over $660 a year but do not exceed $1,800 a year. The latter class of persons pay 8 per cent if their incomes are $1,800-$3,000 and 9 per cent on incomes over $3,000. A taxpayer is entitled to a credit of $28 in respect of each dependant in excess of one. The graduated tax is payable by all persons on all income exceeding $660 a year at the rate of 30 per cent on the first $500 of taxable income or portion thereof; $150 on $500 and 33 per cent on any amount between $500 and $1,000; $315 on an income of $1,000 and 37 per cent on any amount between $1,000 and $2,000; $685 on $2,000 and 41 per cent on any amount between $2,000 and $3,000. Higher rates are imposed on incomes in the higher brackets. A taxpayer with dependants may deduct $150 from the graduated tax in respect of one dependant and $80 for each dependant in excess of one if the dependant is a child or grandchild and 20 per cent of an amount not exceeding $400 actually expended for the support of other dependants. As formerly, the amount of tax payable is not permitted to reduce the taxpayer's income below the minimum fixed above, $1,200 or $660, as the case may be. Other deductions from income which may be claimed include medical expenses in excess of five per cent of the taxpayer's income up to $400 in the case of a single person and $600 in the case of a married person with an additional allowance of $100 for each dependant to the number of four. Payments into a superannuation, retirement or pension fund or plan approved by the Minister which are paid as a condition of employment or in connection with membership in a trade union may be deducted from the aggregate tax payable. Workmen's compensation benefits and pensions in respect of war service to Canada or a country allied with Canada are not liable to taxation.

Beginning with the first pay period after August 31, 1942, employers are to deduct from the wages of each employee and remit to the Receiver General, such amount as may be prescribed by regulations made under the Act. Every employee must file a return with his employer before September 1, 1942, or if employed after that date, immediately upon employment, and if he fails to do so he is liable to have deductions made at the rate prescribed for a single person without dependants.

A portion of the tax is to be treated as savings and is to be refundable within a specified period after the war with accrued interest at two per cent.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

British Columbia Shipyards—National Registration—Seamen and Fishermen—Pilotage Dues—Fire Fighters' Pensions—Hours in Alberta—Minimum Wages in Alberta, British Columbia and Quebec

UNDER the War Measures Act several Orders in Council relating to the continuous operation plan for British Columbia shipyards have been passed and a Royal Commission appointed to study this and other plans. The National Registration Regulations have been amended to complete the transfer of their administration to the Department of Labour. New regulations regarding seamen's certificates have been issued and the Minister of Transport has prescribed wartime safety measures for Canadian ships. Pilotage dues have been increased in the St. Lawrence-Kingston-Ottawa District. Fishermen are to be compensated for war damage to their boats and gear and Canadian fire fighters serving in the United Kingdom will receive pensions for death and disability.

In Alberta certain classes of workers in construction camps and employees on class "B" ferries have been exempted from the maximum hours and weekly rest-day provisions of the Hours of Work Act during the summer season. Minimum wages have been set for cannery workers and the regulations relating to the inspection of electrical installations amended. In British Columbia a new wage Order has been made governing the baking industry. Quebec has renewed its minimum wage Order applying to the glass industry and issued a new one for retail food shops in Quebec City and Quebec-West.

Dominion

Shipbuilding in British Columbia

An Order in Council (P.C. 3636) of May 1, 1942, sets forth the three-shift plan with a six-day work-week for the continuous seven-day operation of the British Columbia shipyards which was proposed by the Minister of Labour and accepted by all the managements and by nine of the eleven unions concerned. Details of the plan were published in the LABOUR GAZETTE, April, p. 384, May, p. 555, June, p. 677 and July, p. 773. The Order required all British Columbia shipyards to be operated in accordance with this plan from May 1.

By P.C. 5480, June 25, 1942, penalties are prescribed for employers and workers who fail to comply with the Order. It is also provided that any employer or employee may apply to the Minister of Labour for the appointment of a Committee to investigate and determine disputes arising out of the assignment of workers to shifts. Such Committees are to consist of not more than three representatives of employers, an equal number of workers and a chairman chosen by the members of the Committee, or if they fail to agree, by the Minister. Owing to the opposition of some groups of workers to the seven-day operation of the yards, the effective date of this Order was postponed and on June 30 P.C. 5650 stipulated that P.C. 5480 should come into effect on a date to be fixed by the Minister of Labour.

Later P.C. 5964, July 13, 1942, provided for the appointment of a Royal Commission to examine the continuous operation plan and the substitute scheme submitted by the workers for six-day operation of the yards and to inquire into any factors impeding production and the most effective means of securing maximum production in the British Columbia shipyards. (LABOUR GAZETTE, July, 1942, p. 773.) A further Order in Council, P.C. 6803 of July 31, 1942, declared that the members of the Commission be constituted a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act.

Fire Fighters' Pensions

P.C. 100/2757, April 11, 1942, provides for pensions in case of disablement or death of members of the Corps of (Civilian) Canadian Fire Fighters for service in the United Kingdom. (LABOUR GAZETTE, May, 1942, p. 584.)

Fishermen

Fishermen who suffer damage to their fishing boats or gear as a result of the war are to be compensated under an Order in Council of July 3, 1942 (P.C. 5036). The order covers damage caused by enemy action or counter action, by precautionary measures to check the spread of damage or to anticipate attack, and by explosions of munitions or explosives being manufactured, stored or transported by any person other than the applicant for compensation. It does not cover damage caused by restrictions on the display of lights, by the activities of enemy agents in Canada or by training measures.

Maximum compensation is set at $2,000 for fishing boats and $400 for gear, and the minimum is $25. A person may not be indemnified for damage to more than one boat at any one time but this does not apply to firms, incorporated co-operative associations or societies of fishermen owning several boats. Applications for compensation, verified by an affidavit or statutory declaration must be submitted to the Minister of Fisheries within 30 days of the damage being suffered unless uncontrollable circumstances delay the application.

Under earlier orders Canadian salt-water fishermen receive free medical service for injuries and pensions for death or disablement due to enemy action (LABOUR GAZETTE, June, 1942, p. 691), and are paid compensation for loss of personal effects or loss of remuneration due to capture or internment (LABOUR GAZETTE, 1939, p. 1202; 1941, p. 650). They are also covered by the Post-Discharge Re-establishment Order (LABOUR GAZETTE, July, 1942, p. 796).

National Registration Regulations

P.C. 6045, July 14, 1942, amends further the National Registration Regulations of July 12, 1940 (P.C. 3156). Several amendments have been made since the original regulations were issued. The principal change effected by

the recent amendment is to substitute "Minister of Labour" for "Minister of National War Services" throughout the regulations and to declare that the central registry shall be kept at the Department of Labour instead of at the Dominion Bureau of Statistics. By P.C. 2253, March 21, 1942 (Labour Gazette, April, 1942, p. 417), all National Registration functions and records were transferred from the Department of National War Services to the Department of Labour for the purposes of the man-power inventory. Another Order in Council (P.C. 6043, July 13, 1942), appoints the Controller of National Selective Service Man-power Records as Chief Registrar for Canada under the National Registration Regulations.

Pilotage Dues

P.C. 5394, June 25, 1942, amends by-law 5 of the St. Lawrence-Kingston-Ottawa Pilotage District to authorize for the duration of hostilities a 10 per cent surcharge on all pilotage dues in that district with the exception of those payable for movage, detention and canalling. The Pilots' Committee of the District proposed the amendment and the Dominion Marine Association representing the shipping interests agreed to it.

Seamen's Certificates

An Order in Council of March 16, 1942 (P.C. 2011), provides that British subjects holding certificates of competency as masters or mates from a foreign State approved by the Minister of Transport, may serve as certificated masters or mates on ships of Canadian registry or on Government ships whether registered or not, if the Minister is satisfied that the person is competent to act in that capacity. A similar privilege was granted to alien masters, mates and engineers to facilitate the operation of foreign ships requisitioned by the Canadian Government (Labour Gazette, 1941, p. 958).

P.C. 5525, June 29, 1942, declares that officers and men of the Royal Canadian Naval Reserve may count in full service in His Majesty's ships during the present war as qualifying service for Master's and Mate's Home-Trade Certificates of Competency. An earlier Order of June 25, 1940 (P.C. 2753), had permitted service in ships connected with the Navy, Army or Air Force or in fishing boats employed on Naval Service to be counted as qualifying service, but service in the Naval Reserve was excluded. However, special consideration was given to applicants for examination who were prevented from completing their qualifications or sitting for examination because of their war service in the Naval Reserve.

The regulations regarding the examination of masters and mates for certificates of competency issued under the Canada Shipping Act in 1936 (Labour Gazette, 1936, p. 1134), only allowed officers of the Reserve to count half the time spent in training on ships of the Royal Canadian Navy and in no case to accumulate more than six months qualifying service in this way.

Under the new regulations service in destroyers, corvettes, mine-sweepers, armed yachts, coastal patrol vessels and examination vessels will be counted as qualifying service, but not service in gate vessels, depot ships, harbour craft and shore establishments. A candidate for a Master's Home-Trade Certificate for cargo or passenger steamships must secure a watchkeeping certificate signed by the commanding officer of his ship or flotilla. This certificate and a record of his qualifying time served in the Naval Reserve must be authenticated by Naval Service Headquarters at Ottawa. In addition he must have completed twelve months service while holding a Mate's Home-Trade Certificate.

A candidate for a Mate's Home-Trade Certificate must be at least 21 years of age and have served 36 months at sea. His record of qualifying time served in the Naval Reserve must also be authenticated at Ottawa.

In all other respects the 1936 regulations relating to the examination of Masters and Mates remain in effect.

P.C. 5526, June 29, 1942, empowers the Minister of Transport to authorize approved persons outside Canada to examine engineers and issue permits in accordance with P.C. 4306 (Labour Gazette, 1941, p. 958). The latter allows Canadian ships to clear with engineers acting in positions of higher grade than they are qualified to fill, if a duly appointed Examiner of Engineers is satisfied in each case that the engineer is competent to act in the higher capacity. Canadian ships trading in the West Indies were unable to avail themselves of this Order because there were no Examiners of Engineers stationed outside Canada. The present Order in Council remedies this situation.

Seamen's Safety

P.C. 3638, May 4, 1942, authorizes the Minister of Transport to make regulations prescribing wartime safety measures and additional life-saving, fire-extinguishing and other equipment for ships of Canadian registry

operating in danger zones. Under the Canada Shipping Act regulations regarding life-saving and fire-extinguishing equipment were issued in 1937 and others covering bilge pumping equipment and other safety measures were authorized earlier. Since these are considered inadequate for war-time conditions three sets of supplementary regulations, which are modelled in special regulations passed with regard to ships of United Kingdom register, have been issued under P.C. 3638.

The "Additional Regulations No. 1—Life Saving Appliances" were approved on May 26. They require all ships of over 500 gross tons to carry, in addition to peace-time equipment emergency life rafts of sufficient capacity to carry all persons on board. Each raft must be provided with receptacles for fresh water, food rations, a large piece of bright cloth, a watertight first-aid kit, smoke flares, a signalling torch and various other tools and equipment. Life boats must also carry these things and, in addition, such equipment as radio transmitting apparatus, hand pumps, fire extinguishers and material for plugging leaks. Lifeboats must be so stowed that they can be readily lowered and lifebuoys, side ladders, rope nets and life-jackets must be carried. Details regarding drills of passengers and crews are set forth.

The "Additional Regulations No. 2—Fire Extinguishing Equipment," issued on July 6, also apply to ships of over 500 gross tons. They set forth the additional fire-fighting equipment which must be carried in ships of various classes, and they make detailed provisions to ensure that the equipment will be readily available and in proper working order. Fire drills must be held before a ship proceeds to sea and at least weekly thereafter.

Special provisions regarding bilge and ballast pumping equipment are set forth in the "Additional Regulations No. 3—Bilge Pumping Arrangements and other Wartime Safety Measures" of July 31. These regulations also require all ships to have emergency lighting arrangements which can be brought into use instantaneously, and to carry a sufficient supply of self-contained electric hand lamps in available positions.

Provincial

Alberta Electrical Protection Act

A regulation gazetted July 15 declares that on application an inspector may render special inspection or other services connected with electrical equipment or installations for a fee of $15 a day and the cost of his transportation and subsistence.

Alberta Hours of Work Act

Four seasonal Orders under this Act have been made to go into effect for the specified period each year.

Order 26, gazetted July 15, exempts between May 15 and October 31 of each year cooks, cookees, bull cooks and barn bosses employed in highway and other construction camps from the weekly rest-day requirement of the Act if they are receiving the monthly minimum wages stipulated in the Order.

Regulation 6, gazetted July 31, exempts the same classes of workers for the same period each year from the nine-hour day and 54-hour week provision of the Act.

The provisions of these two Orders are identical with those of Orders 18 and 18A which were issued for the 1941 season (LABOUR GAZETTE, 1941, p. 651).

Order 27 gazetted July 15 and Regulation 7 gazetted July 31 also exempt from the maximum hours and weekly rest-day provisions of the Act all workers employed on the Class "B" ferries listed in the Orders. These Orders are effective between April 15 and November 15 of each year.

Alberta Male Minimum Wage Act

Minimum hourly wages for workers in canneries were prescribed by Order 21, gazetted and effective July 15. The rates are 50 cents for foremen, 45 cents for assistant foremen, machinists, seamer operators and process men, and 40 cents for labourers and unclassified workers. These rates also apply to part-time workers who must be paid for at least four hours on any day they work. Time and one-half is to be paid for hours in excess of ten a day and 54 a week.

British Columbia Male Minimum Wage Act

A new Order 17 relating to the baking industry was gazetted July 16 and is effective from July 20. It replaces a 1934 order (LABOUR GAZETTE, 1934, p. 1095). The minimum hourly rates remain at 40 cents for workers over 21. For those aged 20, 19, and 18 years they are 35, 30 and 25 cents respectively. A new provision sets a minimum rate of 20 cents for workers under 18 and specifies that not more than 15 per cent of the male employees in any establishment shall receive less than 40 cents an hour. The Order does not apply to apprentices indentured under the Apprenticeship Act, to workers in the baking industry covered by other orders or to handicapped, inexperienced or part-time workers exempted from minimum wage orders by the Board of Industrial Relations.

Quebec Minimum Wage Act

A new Order 35 governing retail food shops in Quebec City and Quebec-West was gazetted and is effective August 1, and replaces the Order of October 2, 1939 (Labour Gazette, 1940, p. 21). The minimum rates remain unchanged and only slight modifications have been made in the Order. They include the substitution of references to Order 4, 1942 (Labour Gazette, May, 1942, p. 586) for references to the former Order 4, the prescription of a minimum rate of 15 cents an hour for office employees with less than one year's experience and the addition of 2 cents per hour to the minimum rate of 10 cents for messengers if they furnish and repair their own bicycles. Office boys have been moved from Category III (office employees) to category IV which covers inside and outside messengers and carters' and motor drivers' helpers.

The provision relating to overtime pay has been reworded so that "wage rate and one-half" now means one and one-half times the minimum rate instead of the employee's regular rate plus one-half the minimum rate. The clauses empowering the Board to determine the nature of an establishment and declare it to be governed wholly or partly by this or any other Order, and to fix the proportion of temporary employees in any establishment and declare which ones shall be classified as such have been eliminated.

Order 37 governing establishments manufacturing glass containers (Labour Gazette, 1940, p. 927) has been renewed to August 1, 1943, by a notice gazetted August 1, 1942.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at June 30, 1942

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at June 30, 1942. (The text of the Old Age Pensions Act was given in the Labour Gazette for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pension Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (Labour Gazette, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

OLD AGE PENSIONS

FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1942

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective Mar. 1, 1934	Ontario Act effective Nov. 1, 1929

—	Ontario Act effective Sept. 1, 1937	P.E.I. Act effective Dec. 1, 1937	Quebec Act effective Oct. 1, 1937	Saskatchewan Act effective Nov. 15, 1937	Totals
Number of pensioners	1,511	118	2,076	323	6,257
Average monthly pension	19·67	13·41	19·55	19·89	
*Percentage of pensioners to total population	·040	·126	·063	·036	
Dominion Government's contributions for quarter ended June 30, 1942	$66,147 69	$3,588 67	$91,966 99	$14,581 74	$274,375 69
Dominion Government's contributions from inception of amendment to O.A.P. Act	$1,042,273 99	$56,384 21	$1,409,122 96	$202,072 81	$4,149,727 01

* Percentages based on the estimated population as at June 1, 1941, taking into account the preliminary figures of the 1941 Census—Dominion Bureau of Statistics.

The maximum pension payable to a blind person, whether married, or unmarried, is $240 per annum. If however, a blind person marries another blind person after March 31, 1937, the maximum pension is reduced to $120. If a pensioner is unmarried, the maximum pension is reduced by the amount of his income from earnings or other sources in excess of $200 a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of $165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $400. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $200.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

FACTORY WELFARE REGULATION IN GREAT BRITAIN AND CANADA

WITH the industrial worker assuming an increasingly significant role in the war program, his welfare and working conditions have become a problem of the first importance. Most existing legislation in this field was designed for peace-time conditions and did not foresee the war-time expansion of the labour force, the increasing employment of women, the extended use of shift systems and the development of new industries using different processes and often located far from populous centres. Great Britain, with the most experience in factory legislation and the employment of women, was well prepared to meet the situation but has had to supplement its Factories Act with several emergency orders. Canda has had rather scanty factory welfare legislation and in many industries little experience with a female labour force. In both Britain and Canada the employment of women at night has long been prohibited by statute. The relaxing of this prohibition has made necessary some special provisions for women's welfare.

All Canadian provinces but Prince Edward Island have Factory Acts, seven of which declare it unlawful to employ workers so as to injure their health and four apply this prohibition specifically to women. Only New Brunswick lacks this general provision which, however, has to be translated into concrete terms by the provincial factory inspectors. There may be a wide gap, of course, between conditions that are likely to injure health and conditions that conduce to the comfort and efficiency of the worker. Under the War Measures Act the Dominion Government issued an order on March 2, 1942, giving the Dominion Minister of Pensions and National Health power to require employers engaged on war contracts to provide medical services and to maintain a record of sickness and accidents, adhere to standards of cleanliness, lighting, heating, ventilation, etc., display health and safety posters, satisfy nutritional standards in regard to any food provided to the workers and permit regular physical examinations of persons preparing or serving food to the workers (Labour Gazette, May, 1942, p. 583).

All the provinces demand that factories be kept clean and sanitary and have general provisions concerning ventilation, heating, overcrowding, etc. Few specific requirements are laid down, however. Less frequent in Canada is statutory provision for welfare facilities such as an adequate and convenient supply of drinking water, washing water and towels, cloak rooms or lockers for leaving outdoor wraps or for changing or drying work-clothing, canteens or lunch rooms, rest-rooms, proper seats for those who sit at their work and seats for the occasional use of those who stand, the supervision by a woman welfare officer, and for conveyance to and from the plant where ordinary transport facilities are lacking.

In Great Britain, however, almost all these welfare facilities are required either by the Factories Act, 1937, or regulations made under its authority, or, during the war, by orders under Regulation 60 of the Defence (General) Regulations, 1939, which empowers the Minister of Labour and National Service to make orders to secure "the safety, health and welfare" of workers in war industries. In June, 1940, the administration of the Factories Act was transferred from the Home Office to the Ministry of Labour for the duration of the

war, and a factory and welfare department was set up. The factory inspection service in Britain includes medical inspectors as well as engineering inspectors and others. Britain has supplemented its legislative requirements in the field of welfare by the publication of a series of welfare pamphlets containing recommended standards for lighting, sanitary conveniences, mess-rooms, seats, etc. These have been revised from time to time.

The legal requirements in Britain and Canada with respect to welfare facilities are set out briefly below. It must be remembered, however, that many employers have far exceeded the legal minimum in the provision of welfare facilities for their employees.

Drinking water.—Pure drinking water must be provided by employers in Britain, Alberta, Ontario and Saskatchewan and clean cups or sanitary fountains must also be furnished. Nova Scotia, Saskatchewan, Alberta and Manitoba forbid the use of common towels or cups.

Washing facilities.—The factory legislation of Britain and Canada covers general factory sanitation. The British Act expressly requires adequate and suitable facilities for washing, including soap and towels or other suitable means of cleaning and drying. The facilities must be conveniently accessible and kept in a clean and orderly condition. In Canada, only Ontario and Alberta call for washrooms with soap and towels although Quebec's regulations stipulate that "facilities for securing individual cleanliness" be provided.

Sanitary conveniences.—Toilets, separate for each sex, are required by all the legislation. In Britain toilets must be provided with lighting and where women are employed there must be one toilet for every 25 women. The same proportion must be provided for men but it may be reduced where the number of male workers exceeds 500. Ontario specifies one toilet for every 15 women.

Cloak-rooms and Dressing-rooms.—As regards cloak-rooms and dressing-rooms where employees may change and keep their clothing, Britain requires the provision of adequate and suitable accommodation for clothing not worn during working hours with facilities for drying such clothing. Quebec stipulates that employees must be provided with suitable places to change their clothes and Ontario calls for dressing rooms for women with a matron in charge if there are 35 or more female employees. None of the other provincial laws deals with the subject.

Lunch-rooms and Canteens.—On the question of lunch-rooms, the British Factories Act empowers the Secretary of State to make regulations regarding arrangements for preparing, heating and taking meals and a number of orders requiring the installation of mess-rooms in various classes of factories have been issued. The problem of feeding the workers has become more serious in Britain due to such war conditions as extensive night work, factories located far from towns, rationing of food, etc., and special regulations have been issued to meet this situation. Most of the Emergency Orders granting exemptions from the Factories Act, particularly in regard to the employment of women and young persons, contain stipulations that mess-rooms with means for heating food and boiling water must be installed, and all factories with 250 or more workers must provide a canteen serving hot meals if the inspector so directs. The General Engineering Order applying to light and heavy engineering, shipbuilding, aircraft manufacture and other metal trades in which women are now employed in large numbers, requires mess-rooms. Many Orders permitting longer hours than the 48-hour week permitted by the Factories Act for women also require that facilities for obtaining refreshment during breaks may be furnished.

The British Factories Act forbids women remaining in the work-room during meal or rest intervals. Where poisonous substances are used, Britain, Ontario and Alberta prohibit workers partaking of any food in the work-room. All the Canadian Factory Acts except those of Quebec and New Brunswick authorize the inspector to require the provision of lunch-rooms and to forbid women having meals in work-rooms. Quebec's regulations declare that the inspector may require employers to provide places where meals can be taken and that workers shall have facilities for warming food, and a place of shelter in which to eat during bad weather.

Seats for women.—The Factories Act, 1937, requires employers to provide and maintain for the use of all female workers, whose work is done standing, suitable facilities for sitting sufficient to enable them to take advantage of any opportunities for resting which may occur in the course of their employment. A welfare pamphlet published by the Home Office illustrates different ways of providing such seats, tip-up seats attached to machines or attached to the wall, hammock seats attached to machines, etc. This provision is of great importance to the health of women, particularly those who are new to industry or to long hours of standing.

In Alberta, New Brunswick and Ontario, the inspector may direct that chairs or seats of a suitable kind be provided for the use of women at work. Quebec calls for chairs with backs for employees whose occupations permit of their sitting down.

Childbirth.—Britain forbids the employment of women within four weeks after childbirth.

Lighting.—The problem of adequate lighting in factories has not been dealt with by any of the Canadian provinces in their Factory Acts although Quebec's regulations stipulate that "the workrooms, staircases, passages, elevators, exits, and all places where the apparatus for signalling to stop machinery, or set it in motion, are placed, must be properly lighted."

Britain demands "suitable and sufficient lighting" in every part of a factory in which persons work or pass and requires that glazed windows and skylights must be kept clean. The Act also authorizes the Secretary of State to prescribe a standard of lighting for any factory process or industry and a welfare pamphlet has been issued on this subject. It discusses such topics as prevention of glare and shadows, the amount of illumination required for different types of work and the causes of unsatisfactory lighting.

Welfare Supervisor.—Wherever women are employed at night the British Emergency Orders require that arrangements must be made for their supervision by a forewoman or welfare supervisor.

Transport.—The British Defence (General) Regulations, 1939, authorized the Secretary of State to require an employer to make special arrangements for the conveyance of workers living at a distance when ordinary transport facilities are lacking or insufficient.

THE ORGANIZATION OF LABOUR SUPPLY IN GREAT BRITAIN

Registration of Workers: Registration for Employment Order, 1941—Compulsory Recruitment and Transfer of Workers: National Service (No. 2) Act, 1941—Control of Labour Turnover: Essential Work Orders.

THE organization of labour supply involves the following basic problems: (1) the increase of the existing supply by drawing on hitherto unused resources; (2) the efficient use of that supply by allocating workers to the jobs where they are most needed; and (3) the elimination of confusion in the labour market by preventing unnecessary labour turnover. Logically the third of these problems is perhaps only an aspect of the second, but from the point of view of practical administration the two are distinct since quite different measures are necessary to deal with each. There is, on the other hand, a close administrative connection between the second and first problems. In Britain the same measures are designed as a rule both to draw new workers into industry and to redistribute those already employed. In this article, therefore, the measures taken to deal with the first two problems will be summarized together while those relating to the third will be treated separately.

Early Measures to Increase and Re-allocate Labour Supply

The basis of any scheme for the organization of labour supply is the collection of information. Well-planned registration is therefore essential and most classes of workers in Great Britain have now been registered.

Immediately after the outbreak of war a National Register was compiled under the National Registration Act, 1939. This, however, seems to have been used mainly in connection with the rationing of goods, and the nature of the information secured was such as to limit its usefulness for labour supply policy. It was not until some time later that registrations more directly related to this policy were carried out.

In the early stages of the war little was done directly to recruit or transfer workers. Men between the ages of 18 and 41 were made liable to compulsory military service under the National Service Act, 1939, and early in 1941 this liability was extended to civil defence. A schedule of reserved occupations was drawn up and the military service of the men in these occupations was deferred on the ground that their skill and experience was needed in industry. This schedule was amended from time to time and at the end of 1941 a new policy was introduced whereby the system of reservation by occupations is being gradually replaced by a system of individual deferment.

Apart from military service, however, no compulsion was exercised, and, indeed, the Emergency Powers (Defence) Act, 1939, specifically stated that it did not authorize "any form of industrial conscription". Moreover, there was no legislation which was designed even to guide workers into more important jobs.

The truth was that during the first year of war the unemployed formed a substantial reservoir of labour which filled most require-

ments. At the beginning of 1940 they numbered over 1½ millions when the temporarily stopped and casually unemployed were counted. This reservoir was steadily reduced, however, and by the end of 1941 there were less than 200,000 unemployed of all types.

Contraction of Non-essential Industries

It is perhaps true to say that during the first year and a half such re-distribution of workers as did not result from the normal operation of the labour market, was produced in the main by measures which were designed chiefly for other purposes. Because of the difficulty of obtaining raw materials and machinery, as well as labour, production of consumers' goods has been greatly reduced. This result was produced in several ways. An increasing list of goods has been rationed and the production of some has been restricted. At the same time, a heavy purchase tax has been placed on a wide range of manufactured goods, while purchasing power has been reduced by the income tax, forced saving and campaigns for voluntary saving.

Perhaps more important for the labour supply situation, however, are the Limitation of Supplies Orders and the plan for concentrating industries. The Limitation of Supplies Orders, which apply to such industries as hosiery, pottery, textiles, furniture and boots and shoes, limit the amount of goods which wholesalers and manufacturers may supply to retailers. The concentration plan originally applied to roughly the same industries but was later extended. As a result of it a substantial degree of rationalization was effected. In July, 1939, there were about one million insured workers in these industries, and the figure has now declined to less than 250,000.

Government Supervision of Employment

After the invasion of the Lowlands the Minister of Labour and National Service was given increased powers over the labour supply of the country. On May 22, 1940, a new Emergency Powers Act was passed which eliminated the provision of the 1939 Act forbidding industrial conscription and authorized the issuance of Orders in Council requiring persons to place their services and property at the disposal of the Government. Under authority of this Act a new Regulation (58A) was inserted in the Defence Regulations, giving the Minister authority to direct any person to take any job he is capable of performing and to fix his wages, to require any class of persons to register information about themselves and to require employers to keep records.

The directive power was not implemented till the end of 1941 but several classes were registered in the meantime and a policy was pursued of encouraging workers to enter the employment where they were most needed. Under the Specified Classes of Persons (Registration) (Nos. 1 and 2) Orders, 1940, which came into effect on July 14 and July 20, professional engineers, chemists, physicists and quantity surveyors who were not already employed in government work were required to register. The Industrial Registration Order, 1940, of August 7, provided for the registration of all men in the principal engineering occupations. On February 24, 1941, a further Industrial Registration Order was issued applying to men with experience in shipbuilding.

The purpose of these Orders was to provide information on the basis of which vacancies in engineering and shipbuilding could be filled. Further supervision of the movement of workers in the general engineering industry was introduced by the Undertakings (Restriction on Engagement) Order of June 5, 1940, which provides that no employer may engage a worker except through a government employment exchange. The Order also applied to building, civil engineering and men in agriculture and coal mining, and provided that in coal mining no worker could transfer to work outside the industry without approval. On March 15, 1941, the Electrical Installation (Restriction on Engagement) Order applied provisions similar to those for general engineering to the installation and repair of electrical equipment. These Orders were consolidated in December, 1941. An amendment of March, 1942, permits employers to make direct engagements of women who have reached the age of 31. In order to regularize the employment of dock labour, the Dock Labour (Compulsory Registration) Order of June 18, 1940, provided that in any port with a registration scheme workers must be hired through that scheme. In August, 1940, a special branch of the Ministry of Labour was set up to facilitate the employment of friendly aliens, and in June and July, 1941, a registration of such aliens was carried out.

Registration for Employment Order, 1941

During 1941 an acute shortage of labour began to develop and much more comprehensive measures had to be introduced. The Registration for Employment Order of March 15 applied to the whole working force, actual and potential, of the country. It was

designed both to assist in the re-distribution of workers already employed, and, possibly more important, to tap hitherto unused sources of supply. The Minister of Labour was empowered to require the registration of any class of persons, as for example those in a given age group, region or industry.

Recruiting and transference, however, was still voluntary. Selection interviews were given to registered persons at which they were encouraged, but not compelled, to enter or transfer to the jobs where they could best serve the national interest. Under a revised administrative procedure decided upon in September the women who are registered are now guided only into the armed services and a selected list of war industries.

In addition to the extensive movement of individual workers, especially women, which has resulted from these interviews, entire groups of female workers have been transferred to more essential work. Women between the ages of 20 and 30 have been or are being withdrawn from retail distribution, except the food trades, and from voluntary services. Women between 20 and 25 have been withdrawn from the clothing industry, woollens and worsteds, certain branches of the postal service and local authorities.

By December, 1941, women between the ages of 21 and 31 and men between 41 and 46 were registered. Men with previous experience in marine engineering, the merchant navy and coal mining were also registered.

Compulsory Recruitment and Transference

At the end of 1941 compulsion was finally introduced. On December 18 assent was given to an Act amending the National Service Acts, 1939-41, under which men are called up for military service. This amendment extended the age limit for men from 41 to 51, applied the Acts to women, and provided that all persons of either sex who are subject to the Acts are liable to some form of national service, if not in the armed forces or civil defence, then in industry. The compulsory powers, however, are held in reserve, and the policy is still to enlist the co-operation of the people as far as possible.

The registration already completed under the Registration for Employment Order is being used for the purposes of the new Act, as well as the registration of additional classes under that Order which has been carried out during 1942. In 1942 women up to 41 were registered as well as the new 21-year age group. There was also a registration of civil defence personnel, both male and female. Boys and girls of 16 to 18 years of age are required by the new Act to register through local youth committees and are encouraged to join some organization in which they can do useful work. By June, 1942, the number of men who either had already registered for military service or were registered under the Registration for Employment Order, totalled almost 10 millions. The number of women had reached approximately 7 millions.

Since young women now form the most important class from which workers can be recruited, a special Order applying to them was passed early this year to ensure that they will be directed to the most important jobs. This is the Employment of Women (Control of Engagement) Order, 1942, passed on January 22 and amended on April 28. Women between the ages of 18 and 30 are prohibited from obtaining employment except through an employment exchange. Women with children under 14 years of age and those in certain occupations are exempt from the Order. The Undertakings (Restriction on Engagement) Order, which, as we saw above, made a similar provision for all workers of both sexes in a few industries, remains in force.

Control of Labour Turnover

The policy regarding the retention of essential workers in their jobs, like that for recruiting and allocating workers, has been developed empirically. Early measures were designed merely to meet isolated situations which had become critical, and it was not until later—under the Essential Work Orders—that comprehensive measures were introduced.

At the beginning of the war the Control of Employment Act, 1939, was passed to empower the Minister of Labour to prohibit employers from advertising for or hiring new employees without his approval. However, only one Order was issued under this Act, the Control of Employment (Advertisements) Order, 1940, which forbade employers in building and civil engineering to advertise for carpenters, joiners or bricklayers.

As we have seen in an earlier section, the Restriction on Engagement Orders of 1940 and 1941 regulated the transfer of workers in engineering and electrical installation work and practically forbade movement out of coal mining.

Essential Work Orders

In 1941, almost simultaneously with the Registration for Employment Order, a comprehensive measure for eliminating any except essential movement of workers was introduced. On February 28 Defence Regulation

58A was amended to empower the Minister of Labour to order that persons employed in any undertakings he might specify shall continue to be employed there, that they will be paid reasonable wages and that they may not be absent from work without reasonable excuse. Under this authority the various Essential Work Orders have been issued. By May, 1942, 6½ million workers were covered by these Orders.

The Essential Work (General Provisions) Order was first issued on March 5, 1941. It was amended on July 18, 1941, and was then amended and consolidated on March 2, 1942. The consolidation was in turn amended on March 25.

In its present form it makes the following provisions. There is a Schedule of Undertakings in which the Minister may enter the name of any firm which he considers is engaged on essential war production. Any such firm is a scheduled undertaking in respect of any persons or classes of persons whom the Minister may specify. No firm, however, may be permanently scheduled, though it may be provisionally scheduled, if the conditions of employment are less favourable than those provided for by the Conditions of Employment and National Arbitration Order, 1940, as amended (LABOUR GAZETTE, 1940, p. 760), if welfare provisions are unsatisfactory or if satisfactory training is not provided. The Schedule was first drawn up under the original Order of March 5, 1941, and it was also under this original Order that the National Service Officers and Local Appeal Boards referred to below were appointed.

In any scheduled undertaking no specified person may be dismissed, except for serious misconduct, without the permission of a National Service Officer. Similarly, no specified person may voluntarily leave his employment without this permission. Wherever practicable the Officer must give his decision within seven days of the application. Specified persons are guaranteed the normal wage for a normal week at the time rate applicable to them, provided that they are capable and available for work. Appeals from the decisions of a National Service Officer may be made to a Local Appeal Board, and the Appeal Boards also deal with appeals in cases where a worker is dismissed on the ground of serious misconduct.

Any specified person who absents himself from work or is persistently late will be reported to a National Service Officer, who may prosecute him under Defence Regulation 58A. If, however, a joint production committee exists in the undertaking (see LABOUR GAZETTE, June, 1942, p. 700), the case must be referred to this committee by the National Service Officer and a prosecution will be instituted only if the committee considers it necessary.

Since the issuance of the original Essential Work (General Provisions) Order, a series of special Orders have been passed applying to the following industries: shipbuilding and repairing, coal mining, building and civil engineering, dock labour, iron and steel, Scottish agriculture, railways, cotton manufacturing and chain manufacturing. These special Orders were made necessary by the fact that, due to peculiarities of the industries concerned, the terms of the General Provisions Order could not be applied to them without modification.

The following are the more important provisions of these special Orders which differ from the general Order. In shipbuilding there are District Shipyard Controllers who exercise the powers of the National Service Officers in regard to the termination of employment, and workers may be transferred without permission among scheduled undertakings which have been registered by the Controller as "grouped undertakings." In building and civil engineering there are groups of specified sites within which workers are interchangeable without permission, and, moreover, special Building Volunteers are enrolled who, in return for certain privileges, must be ready to go at once to any place in Great Britain where they are needed. There is also an Order for this industry entitled the Building and Civil Engineering (Restriction on Transfer) Order of December 18, 1941, which prevents employers from collecting and transferring from one job to another a labour force to which they have no special title, thereby depriving other employers of local labour. In iron and steel there is a special Labour Supply Organization whose duty is to secure the best use of labour in the industry, to transfer workers if necessary and to obtain additional labour. The definition of "normal wage" has been modified for cotton manufacturing and chain manufacturing.

Dock workers have been organized into a regular mobile force. A Merchant Navy Reserve Pool has been established to regularize the employment of seamen. The coal mining Order prohibits the engagement of miners except through employment exchanges and incorporates the rule made under the Undertakings (Restrictions on Engagement) Order prohibiting the engagement of miners in work outside the industry except through an exchange. Dockers, seamen and miners are all paid a retaining wage while not working.

THE CONTROL OF EMPLOYMENT IN NEW ZEALAND

COMPARATIVELY early in the war New Zealand was faced with the problem of organizing its limited man-power resources to meet the expanding requirements of the armed services, new munitions factories and its essential dairy, meat and wool industries. On June 18, 1940, the original National Service Emergency Regulations were issued empowering the Minister of National Service to direct persons over 16 to perform any non-military services and to forbid employees in specified industries to leave their jobs without his consent.

The sections of these regulations relating to national service outside the armed forces were substantially amended in May, 1941, and January, 1942, and were revised and consolidated on May 20, 1942. The amendments have tightened the Government's control over employment in essential industries and provided machinery for directing workers not yet engaged in war work into essential employment. The May, 1941, amendment provided for the registration of employers and employees and channelled the employment of certain classes of workers through the State Placement Service. The January, 1942, amendment prohibited the dismissal or resignation of workers in essential industries without permission and empowered the Minister to direct registered persons into training courses or employment. The recent revision of May 20 merely amplifies the January amendment and provides for the fixing of minimum weekly wages for essential industries.

Paralleling these steps to organize man-power was a series of measures to alter conditions of work which might hinder war-production. Under the Labour Legislation Emergency Regulations, 1939 and 1940, the provisions of Acts, awards or agreements relating to such matters as overtime, holidays, shift work and the employment of women have been varied or suspended in a wide variety of cases. A sub-committee of the Industrial Emergency Council representing labour and management considers all applications for suspensory orders.

The amended National Service Emergency Regulations controlling employment are administered by District Man-Power Officers under the supervision of the Minister and the Director of National Service. The Minister has power to appoint Advisory Councils and Committees to assist in their administration.

Under the regulations any person, firm or corporation may be directed to perform any non-military services specified by the Minister or to undergo training to fit them for the performance of such services. Any class or classes of persons may be required to register for employment and they can then be compelled to undergo vocational training or accept jobs. Employers may also be required to register and furnish information about the type of work they can undertake and to employ or train persons sent to them. By April, 1942, men between 46 and 50 years of age and women of 20 and 21 had been called on to register. Men from 18 to 46 were already registered for military purposes. In addition all workers in the building and allied trades and in the metal trades have been registered under this regulation by orders issued March 18, 1942, and cheese factory workers were registered in June, 1941. An employer is forbidden to dismiss a worker merely because he has been notified to register for employment. Persons not called on to register may do so voluntarily.

Persons directed into employment under these regulations are paid at rates not less favourable than those prescribed in any pertinent Act, award or agreement, or at rates fixed by the Minister of Labour if no Act, award or agreement applies. They are governed by the law requiring compulsory membership in a trade union and their union dues may be deducted from their wages if they fail to pay them voluntarily. The regulations providing for reinstatement in employment at the conclusion of national service and suspending apprenticeship contracts during war service also apply to such workers.

The Minister is further empowered to declare any industry as a whole or any undertakings within an industry, including undertakings carried on by a Department of the Government, to be essential industries or undertakings. The list of essential industries at present includes coal mining, ship repairing, gas and electric power production, tanneries, freezing works, butter and cheese factories, woollen, rubber and linen flax mills, the timber and flax industries, certain branches of work on the New Zealand government railways and in hospitals, and all firms engaged in the production of munitions of war and military supplies of all kinds or in defence construction works. Employees in such industries may not be dismissed except for serious misconduct nor may they leave their employment without the consent of the District Man-Power Officer. When a worker has been dismissed for misconduct, the case is reviewed by the Man-Power Officer, who may, if he considers the dismissal unjustified, require the employee to be reinstated in the undertaking but not necessarily in the same position

as he held before dismissal, and to be paid for the period since his dismissal.

When any employment is terminated with the consent of the Man-Power Officer, at least seven days' notice must be given to the party concerned and the Director of National Service must also be notified.

The Minister of Labour may fix minimum weekly wages for workers in essential industries but this regulation is not to be regarded as authority for reducing any wage rates fixed by agreement. A worker is entitled to the minimum wage if he is available for work and willing to perform other services in the undertaking when there is insufficient work in his regular job. If a job is completed or abolished, a worker may be transferred to another job within the undertaking at a lower wage with the consent of the Man-Power Officer.

Employers may be required to obtain the consent of the Man-Power Officer before hiring workers of a special class or in specified industries. It is illegal to hire a worker who has left an essential undertaking without permission.

To prevent injustices and hardship, appeals to Man-Power Committees representing labour, management and local authorities are permitted against any direction or order issued under these regulations. In such appeals, employers and workers may be represented by an officer of their respective unions. Workers are to be paid for time lost in consequence of an appeal instituted by their employer and later dismissed.

Under the National Service Regulations, workers may be prosecuted, with the consent of the Man-Power Officer, for negligence or lack of diligence in their work.

The lengthening of the work-week from 5 to 5½ days and of hours from 40 to 54 in many undertakings has caused considerable absenteeism. To meet this situation the Industrial Absenteeism Emergency Regulations were issued on May 20, 1942.

They empower the Minister of Labour, or the Controller of an industry if there is such a person, to prescribe daily or weekly hours and times of work for any or all workers in essential undertakings and in any other designated undertaking, including government-owned establishments. Such notices may call for work on Sundays and holidays in spite of existing Acts, awards or agreements forbidding it.

Penalties are provided for employers who fail to operate in accordance with prescribed hours and for workers who absent themselves without reasonable excuse during the prescribed working hours. Two days' pay may be deducted, with the consent of the District Man-Power Officer, from the wages of a worker who is persistently late or absent for more than four hours on any day, and after this penalty has been imposed twice, proceedings against the workman for violation of these regulations may be undertaken. An appeal to a Man-Power Committee against such deductions is permitted.

A worker who attends a "stop-work" meeting during the prescribed hours of work may be prosecuted unless he can show that he had the permission of his employer or that he was authorized to attend the meeting by an award or agreement.

Job Instruction

Job Instruction is the title of a bulletin issued by the Training Within Industry Branch, Labour Division, of the United States War Production Board. The manual, which was prepared and made available by the Western Electric Company, "is designed for study and discussion by supervisors who wish to become familiar with or keep up-to-date on job instruction practices, and for training groups of instructors or employees who have job instruction duties."

In a general summary at the conclusion of the pamphlet it is stated: "Proper instruction of employees in their jobs can be an important factor both in operating effectiveness and in worker satisfaction. It has been the purpose of this manual to bring together the experience of industrial teachers and the knowledge of students of the learning process, in a series of concrete suggestions as to how jobs can be analyzed and instruction planned to meet the learner's needs, how the teaching process itself can be done successfully, how higher levels of skill can be built up, how special learning difficulties can be recognized and overcome, and how the particular characteristics of the individual learner can be sized up and used to advantage. Fullest use of these suggestions cannot be attained overnight, for directing human learning is a complex process demanding intelligent and interested attention to detail over a period of time. But the supervisor or instructor who masters the art of good teaching will reap returns, not only from seeing the growing skill and satisfaction of the man he trains but from the increased effectiveness of the whole organization of which he is a part."

The manual is divided into seven main divisions under the following title headings: The Problem of Job Training; Analyzing the Job; Planning the Instruction; Teaching the Job; Building up Skill; How the Job Looks to the Learner; and Understanding the Individual Learner. Copies (10 cents each) are obtainable from the United States Superintendent of Documents, Washington, D.C.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Employment and Claims Offices Busy with Selective Service—Statement of Insurance Fund for Twelve Months Ending June 30—Progress of Registration of Employers and Employees—Report of Employment and Claims Offices for June—Employment Conditions at End of July

NATIONAL Selective Service has thrown a tremendous volume of additional work on the Employment and Claims Offices of the Unemployment Insurance Commission and this volume of work will increase when the new orders of the Director of National Selective Service go into effect. To meet the pressure on the Executive at Head Office, Mr. R. G. Barclay, formerly Chief Insurance Officer, has been made Assistant Executive Director.

Additional temporary, special, Selective Service offices are being set up as rapidly as possible. At the outset, there will be seventy-eight of these; thirty-three in Ontario, thirty-one in Quebec, seven in Nova Scotia, three in New Brunswick, and one in each of the provinces of Prince Edward Island, Manitoba, Alberta and British Columbia. These will work in close co-ordination with the 115 permanent Employment and Claims Offices already established across Canada.

This expansion has made necessary the creation of staffs for the new offices, as well as additions to staff of existing offices. The increase in the personnel of the whole organization during the month of July was roughly 400 and many more will be added. There are now approximately 500 Employment and Claims Officers employed in the several offices, of whom about 125 are women. They are the "field technicians" upon whom will devolve much of the responsibility for making the selective service program successful. However, the volume of work and the urgency with which it must be done is making it necessary that many more temporary Employment and Claims officers and clerks shall be appointed, in order to do the work with the necessary dispatch.

Unemployment Insurance Fund

Employers and employees contribute about equal amounts to the fund, with the Government contributing an additional 20 per cent to the aggregate.

It will be observed from the accompanying statement that the total employee-employer contributions for the twelve months ending June 30, 1942, amounted to $49,657,539.65—slightly over four million dollars a month,—while the Government's contribution was $9,931,507.92—something less than a million dollars a month.

Insurance Registration

Reports from local offices of the Unemployment Insurance Commission showed that at August 4, 1942, 155,741 employers and 2,838,499 employees were registered. Of the latter, 2,352,225 were insurable and 486,274 were uninsurable.

The insurable group consisted of insurable employees of registered firms, and unemployed males whose last employment was insurable. The uninsurable group consisted of uninsurable employees of registered firms, partners and proprietors of these firms, and unemployed males whose last employment was uninsurable.

Report of Employment and Claims Offices for June, 1942

Records of the Employment and Claims Offices of the Unemployment Insurance Commission for the month of June, 1942, showed a gain of 17 per cent in the average daily placements when compared with those of the previous month, improvement being reported in all groups, except services and logging, the most noteworthy increases taking place in manufacturing and construction, with others, smaller in volume, in trade, agriculture, transportation and mining. A decline from June a year ago of nearly 7 per cent was recorded in the daily average of placements effected. Under this comparison heavy reductions were registered in services, logging and agriculture and a more moderate loss in transportation, these adverse changes being partly offset by a

* Includes all non-insurable employees of registered firms and partners and proprietors of these firms.

out the month, that of vacancies revealing a drop of over 43 points and that of placements 30 points, the levels at the close of June standing at 49·9 and 30·6, respectively, in comparison with 93·4 and 60·6 at the close of May and of 72·6 and 66·7 at the end of the corresponding month a year ago. These sharp declines in both instances were almost entirely due to a substantial increase in the number of applicants registered during the month, as a result of the compulsory registration of male persons, between the ages of 16 and 69 inclusive, under authority of Order in Council P.C. 1445.

The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during June, 1942, was 2,607, as compared with 2,111 during the preceding month and with 1,864 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 5,228, in comparison with 2,260 in May and with 2,566 in June last year.

The average number of placements made daily by the offices of the Commission during June, 1942, was 1,600, of which 1,285 were in regular employment and 315 in work of one week's duration or less, as compared with a total daily average of 1,368 during the preceding month. Placements in June, 1941, averaged 1,712 daily, consisting of 979 placements in regular and 733 in casual employment.

During the month of June, 1942, the offices of the Commission referred 44,732 persons to vacancies and effected a total of 39,981 placements. Of these, the placements in regular employment were 32,103, of which 24,812 were male and 7,291 female, while placements in casual work totalled 7,878. The number of vacancies reported by employers was 44,690 for men and 20,476 for women, a total of 65,166, and applications for work numbered 130,689, of which 106,605 were from men and 24,084 from women. Reports for May, 1942, showed 52,759 positions available, 56,475 applications made and 34,200 placements effected, while in June, 1941, there were recorded 44,729 vacancies, 61,580 applications for work and 41,079 placements in regular and casual employment.

The following table gives the placements effected by employment offices, each year, from January, 1932, to date:—

Year	Placements		
	Regular	Casual	Totals
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536

1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942 (6 months)	125,172	50,811	175,983

Nova Scotia and Prince Edward Island

During the month of June, 1942, positions offered through Employment and Claims Offices in Nova Scotia and Prince Edward Island were 17 per cent higher than in the preceding month and 95 per cent above the corresponding month of last year. Placements, however, were slightly more than 2 per cent fewer than in May, but nearly 53 per cent above June, 1941. The increase in placements over June of last year was due to substantial gains in construction and manufacturing, offset in part by a decrease in services. Industrial divisions in which most of the placements were effected during the month were:—Construction, 1,651; services, 959; manufacturing, 732 and trade, 104. During the month 2,500 men and 453 women were placed in regular employment.

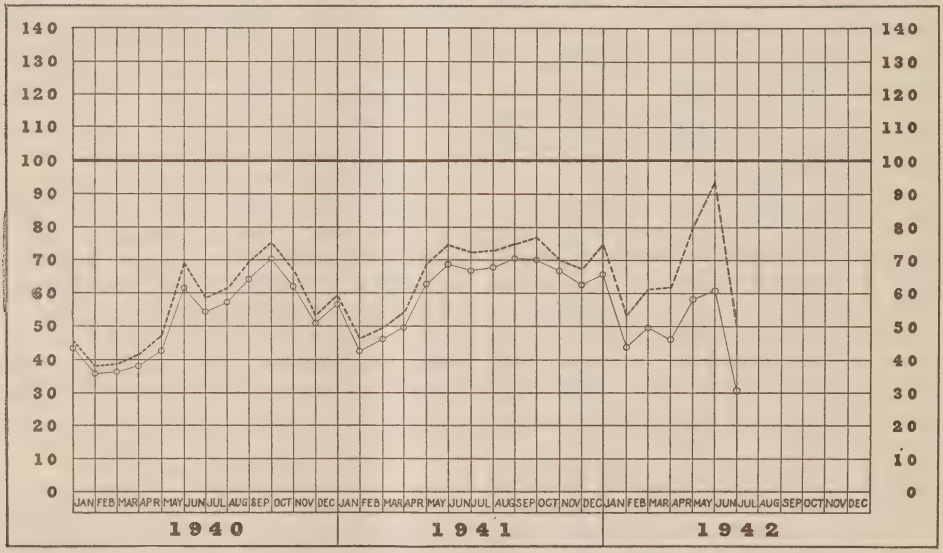
New Brunswick

Opportunities for employment, as indicated by orders received at Employment and Claims Offices in New Brunswick during June, were 54 per cent better than in the preceding month and 93 per cent above the corresponding month of last year. There was an increase also in placements of 30 per cent when compared with May, and of 38 per cent in comparison with June, 1941. The only industrial division in which placements were fewer than during June of last year was services, but as this decline was substantial, it largely offset gains in all other groups. Of the increases reported, the most important were in manufacturing, transportation, construction and trade. Placements by industrial divisions included:—Manufacturing, 539;

services, 429; construction, 356; transportation, 198 and trade, 155. Placements in regular employment numbered 1,196 of men and 239 of women.

QUEBEC

The demand for workers, as indicated by orders received at Employment and Claims Offices in the province of Quebec during June, was 23 per cent higher than in the preceding month and nearly 5 per cent above the corresponding month of last year. Placements were 56 per cent higher than in May, but 36 per cent lower than during June, 1941. There was a considerable variation of placements by industrial divisions when compared with June of last year, the most noteworthy being declines in services and logging, and an increase in manufacturing. Less important changes were a decrease in transportation, and increases in construction and trade. Placements by industrial divisions included:—Manufacturing, 3,399; construction, 2,232; services, 1,418; trade, 497, and transportation, 115. During the month 5,682 men and 1,251 women were placed in regular employment.



ONTARIO

There was an increase of 22 per cent in the number of positions offered through Employment and Claims Offices in Ontario during June when compared with the preceding month and of 49 per cent in comparison with the corresponding month of last year. Placements were 11 per cent higher than in May and slightly less than 1 per cent above June, 1941. Placements in the manufacturing industries were considerably higher than during June of last year, and there was an increase also in trade, but these gains were largely offset by declines in construction, services, agriculture, and logging. Placements by industrial divisions included:—Manufacturing, 6,425; services, 3,820; construction, 2,225; trade, 1,066; transportation, 513; agriculture, 460; mining, 297, and forestry and logging, 295. There were 8,793 men and 3,376 women placed in regular employment.

MANITOBA

Employment opportunities, as indicated by orders received at Employment and Claims Offices in Manitoba during June, were 10 per cent fewer than in the preceding month,

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

but 51 per cent above the corresponding month of last year. There was a decrease of nearly 9 per cent in placements when compared with May, but an increase of 17 per cent over June, 1941. Placements in agriculture, services and logging were fewer than in June of last year, but these decreases were more than offset by gains in all other groups, the most important of which were in construction, transportation, manufacturing and trade. Industrial divisions in which most of the placements were effected during the month were:—Services, 1,214; construction, 669; manufacturing, 327; transportation, 214; trade, 199; forestry and logging, 127, and agriculture, 106. During the month 1,544 men and 351 women were placed in regular employment.

Saskatchewan

Orders received at Employment and Claims Offices in Saskatchewan during June called for nearly 6 per cent fewer workers than in the preceding month, but showed a fractional gain over the corresponding month of last year. There was a decrease in placements of 13 per cent when compared with May and of 20 per cent in comparison with June, 1941. The only changes of importance in placements, when compared with June of last year, were declines in services and agriculture and an increase in trade. Placements by industrial divisions included:—Services, 614; construction, 228; trade, 149; agriculture, 122, and manufacturing, 110. Regular placements numbered 628 of men and 228 of women.

Alberta

During June, Employment and Claims Offices in Alberta were notified of 10 per cent more vacancies than in the preceding month and 42 per cent more than during the corresponding month of last year. Placements also were 18 per cent higher than in May and 32 per cent above June, 1941. All industrial divisions, except agriculture and logging, participated in the increase in placements over June of last year, the most important gains being in construction, manufacturing, trade and transportation. Placements by industrial divisions included:—Services, 859; construction, 766; agriculture, 364; manufacturing, 344; trade, 171, and transportation, 142. During the month 1,799 men and 533 women were placed in regular employment.

British Columbia

Positions offered through Employment and Claims Offices in British Columbia during June were 60 per cent more numerous than in the preceding month, and 156 per cent above the corresponding month of last year. There was a gain of 36 per cent in placements when compared with May and of 19 per cent in comparison with June, 1941. There was a fairly large decrease in placements under construction when compared with June of last year and a moderate decline in mining, but all other industrial divisions showed increases, the most important of which were in manufacturing, logging, agriculture and trade. Industrial divisions in which most of the placements were effected during the month were:—Services, 1,308; construction, 844; agriculture, 466; forestry and logging, 280; trade, 201, and transportation, 117. During the month 2,670 men and 860 women were placed in regular employment.

Movement of Labour

During the month of June, 1942, Employment and Claims Offices effected 32,103 placements in regular employment, of these 3,050 were of persons to whom was granted the reduced rate, 1,743 proceeding to centres within the same province as the despatching office and 1,307 to other provinces. The rate given, which is 2·5 cents per mile for coach tickets, tax extra, where the fare is at least $4, is granted by the railway companies to bona fide applicants at the employment offices, who may desire to journey to distant employment, for which no workers are available locally.

Nova Scotia offices during June despatched one machinist to Vancouver from Halifax, while those in New Brunswick sent 146 workers to Chicoutimi, 69 travelling from Campbellton and 77 from Moncton. These included 3 carpenters, one mechanic, one paper finisher, one factory hand and 140 labourers. Of the 1,127 certificates issued by offices in the Province of Quebec, 1,111 were

* 998 placements effected by offices now closed.

for workers journeying to construction projects in the Chicoutimi zone, 922 of which were for unskilled labour, the despatching offices and the numbers transferred being as follows:—Granby, 21; Hull, 19; Joliette, 14; Matane, 23; Montreal, 282; Quebec, 311; Riviere du Loup, 15; Rouyn, 83; Shawinigan Falls, 158; St. Hyacinthe, 38; St. Jean, 14; Sherbrooke, 67; Sorel, 1; Three Rivers, 15; Thetford Mines, 12; Val d'Or, 16; Valleyfield, 3, and Victoriaville, 19, and the remaining workers divided into the following groups:—107 carpenters, 26 muckers, 21 factory hands, 8 apprentices, 5 potmen, 3 journeymen, 2 electricians, 2 clerks, 2 riggers, 2 cement finishers, 2 moulders, and 9 tradesmen of other occupations. In addition, Rouyn sent 2 bushmen to Val d'Or and Thetford Mines, 3 welders, 3 apprentices, 3 carpenters, 1 mechanic, 1 millwright and 3 dockyard labourers to Sorel. Ontario offices granted reduced rate certificates to 200 people going to provincial employment and 18 to interprovincial. In the former division, of those persons bound for points within the zone of the despatching offices, Fort William sent 1 bushman, 1 river driver, 1 cook and 1 cookee; Port Arthur transferred 61 bushmen, 10 cooks, 10 cookees, 8 dam builders, 4 teamsters, 3 carpenters, 3 sawyers, 2 saw-mill operators, 2 jackhammermen, 2 foremen, 2 blacksmiths, 1 clerk, 1 plasterer, 1 bulldozer operator and 21 labourers, and Sudbury, 4 caterer's helpers, 3 cooks and 3 cookees. Fort William also received 1 pulpcutter from Fort Frances, Port Arthur, 3 bushmen from Sudbury and Sudbury 10 mine labourers from Cornwall, the remaining provincial movement being as follows:—Cornwall to Pembroke, 4 labourers; to Welland, 2 labourers; Kingston to Welland, 2 carpenters; Kirkland Lake to Niagara Falls, 17 labourers; to St. Catharines, 5 labourers; to Timmins, 3 mill labourers; to Welland, 3 labourers; North Bay to St. Catharines, 3 labourers and to Timmins, 1 scaler and 1 pulpcutter. Interprovincially, Prince Rupert was the destination of 13 persons consisting of 1 driver, 1 foreman, 1 bridgeman, 1 cook, 1 driller and 7 labourers from Port Arthur and 1 highway construction worker from Toronto, while Vancouver received 3 carpenters—2 from Fort William and 1 from Fort Frances, the other interprovincial vouchers being for

a boilerman proceeding from Oshawa to Halifax and for a carpenter from Toronto to Montreal. In Manitoba, 735 persons took advantage of the reduced rate, 123 travelling to provincial points and 612 to interprovincial. Of the former, to locations within its respective zone, Dauphin sent 6 woodcutters and Winnipeg, 18 bushmen, 2 cement finishers, 2 cookees, 1 teamster and 59 labourers. Besides these, Winnipeg sent to Brandon, 18 cookees, 1 cook and 1 farm hand; to Dauphin, 2 cooks, and to Flin Flon 4 miners and 9 mine labourers. Interprovincially, Vancouver was the point to which the greater part of the men journeyed, 48 labourers going from Flin Flon, 4 carpenters and 3 labourers from Portage la Prairie and 220 carpenters, 12 cookees, 1 cook, 1 baker, 1 foreman and 173 labourers from Winnipeg. Other interprovincial transfers were as follows:—Dauphin to Kenora, 2 pulpwood cutters and Winnipeg to Fort William, 6 labourers and 1 carpenter; to Port Arthur, 61 bushmen, 16 cookees, 5 cooks, 2 drillers, 1 bulldozer operator, 1 oiler, 1 diesel mechanic, 1 teamster and 14 labourers; to Prince Rupert, 20 carpenters, 1 foreman and 16 labourers and to Regina 1 painter. Saskatchewan transfers at the reduced rate, 43 in number, were all interprovincial, Regina consigning to Nelson, 5 smelter labourers and to Vancouver, 2 fruit pickers; Saskatoon to Edmonton, 4 carpenters; to Nelson 2 mine labourers; to Prince Rupert, 10 carpenters and 9 labourers and to Vancouver, 5 fruit pickers and Yorkton to Flin Flon, 2 miners and to Vancouver, 4 carpenters. Profiting by the special rate in Alberta, 293 persons went to provincial employment and 487 to interprovincial. To points within the zone of the despatching office, Calgary forwarded 9 muckers and 1 cook, while Edmonton transferred 38 carpenters, 35 truck drivers, 25 deck hands, 13 miners, 12 cooks, 10 cookees, 8 mill hands, 6 bulldozer operators, 6 hotel employees, 4 flunkeys, 3 bushmen, 3 tractor operators, 2 freight checkers, 2 catskinners, 2 carpenter's apprentices, 2 stenographers, 2 rod hands, 66 labourers and 18 workers in miscellaneous trades. Calgary also despatched to Edmonton, 24 carpenters and 2 cooks. The entire interprovincial movement was to British Columbia, Calgary directing to Nelson, 34 labourers; to Penticton, 15 fruit pickers; to Prince Rupert, 11 labourers; to Vancouver, 100 fruit pickers, 10 carpenters, and 75 labourers and to Victoria, 1 machinist's helper. In addition, Edmonton shipped to Prince Rupert, 54 carpenters, 54 mill hands, 12 bushmen, 7 teamsters, 6 cookees, 5 lumber handlers, 4 sawyers, 3 swampers, 2 cooks, 2 catskinners, 2 jitney drivers, 1 dish washer, 1 blacksmith, 1 planer feeder, 1 boom man, 1 barn boss and 77 labourers; to Kamloops, 2 bushmen; to Vancouver, 1 mechanic and 3 berry pickers, and to Victoria, 1 machine shop foreman. Medicine Hat also sent to Vancouver, 1 machinist improver.

Of the 3,050 persons who benefited by the reduced rate during June, 2,617 were conveyed by the Canadian National Railways, 379 by the Canadian Pacific Railway, 28 by the Timiskiming and Northern Ontario Railway and 26 by the Quebec Central Railway.

Employment Conditions at the End of July

Placement activities, as reported by employment and claims offices during the month of June, 1942, together with statistical summaries for that period, are covered by an earlier section of this report. Later reports received from these offices indicate that conditions at the end of July were as follows:—

Plentiful rain, mingled with periods of warm sunny weather, greatly benefited crops in the Maritimes and Prince Edward Island. Farmers were in the midst of a late haying season and the gathering and marketing of garden truck, although hampered by the shortage of farm labour. Pulpwood operations were active and woodsmen scarce; sawmills were working to capacity. Good catches of cod, hake and mackerel were reported, but the lobster and salmon fishing season had closed. Coal mines were working to capacity. Manufacturing concerns engaged on war contracts were very busy, while operations in non-essential lines, were being curtailed, owing to want of raw material. Biscuit manufacturers also were operating below average, on account of the scarcity of sugar. All construction under way was progressing satisfactorily, although some delay occurred in wartime housing, because of lack of materials. Transportation, by rail and bus, was very heavy, and trade, both wholesale and retail, was good. Domestic service was handicapped through insufficiency of suitable applicants. Hotels and restaurants, likewise, were finding it difficult to secure experienced employees.

Farming in the Province of Quebec showed steady activity, although the demand for farm labour was light. Some applicants were placed in the tobacco industry and indications were that young girls might be employed. Applicants for bush work were very limited in number, as the majority of workers preferred employment in industry; thus there were

many unfilled orders for pulpwood cutters. There was a demand for smeltermen, surface labourers and experienced underground men for the mining industry, but few men were applying. Iron and steel and textiles operated on a large scale and there was a continued shortage of skilled workers. Construction—building, dam, highway and transmission lines—was active. Wartime housing also progressed, but there was a need for carpenters and in some localities a shortage of material. In shipbuilding, there was a sudden increase in requests for more highly skilled workers, men in some categories being quite unobtainable. Sorel shipyards were working at capacity, around 4,000 workers being employed. Transportation by rail was heavy; trucking showed a slight reduction. River transportation consisted of large shipments of dressed lumber and wood pulp. Trade was good. Applicants for domestic service, hotels and restaurants, were very scarce, as many women and girls preferred work in other lines, which would prove more remunerative.

There still existed a fair demand for farm help in Ontario, principally for single men, but few were available, the re-opening date for secondary schools, having been advanced to September 21, in order that students, now engaged, might remain on the farms for a longer period. Harvesting, both grain and tobacco, had started, but the usual experienced help was lacking. The labour shortage in logging continued acute, especially pulpwood cutters and sawmill hands, log driving being nearly completed. Requests for miners were numerous, although production was curtailed in some mines and experienced men hard to obtain. Except for shut-downs of short duration, owing to vacation periods, or want of material, manufacturing concerns were operating fully and skilled workers very scarce. Canning factories were gradually increasing their staffs in preparation for the busy season and women were replacing men wherever possible. The greatest activity prevailed in the iron industry, particularly in steel plants and foundries and staff levels were fairly well maintained. Construction was not quite so brisk, except for government sponsored projects, and carpenters were scarce. Highway work proceeded, but on a somewhat reduced scale. Marine traffic, though limited, continued at a normal rate with varied cargoes; railway transportation was extremely heavy. Trade was brisk, despite there being a noticeable decline in the number of tourists. Experienced stenographers and office help were needed and the supply of institutional workers, as well as household domestics very limited.

In the Prairie Provinces harvesting of coarse grains was just commencing, with the demand for harvest help on the increase and only a limited number of men at hand. In Saskatchewan, the Provincial Government was organizing the province into zones, in order to make university and school students and others available for this work. There were numerous requests for log cutters, swampers and teamsters for the logging industry. Mines were operating fairly steadily, but it was difficult to obtain men with the necessary qualifications. More war industries in the East were contacting for girls and women; skilled mechanics were lacking. Construction was brisk on local projects and some workers had been transferred to the West Coast. Carpenters, however, were in demand. Railways required temporary help for bridge and maintenance work. Wholesale and retail trade was normal. There was still an urgent call for household domestics and hotel and restaurant employees.

In British Columbia, a pronounced shortage of farm labour existed. However, calls for orchard help at Kelowna were not so heavy, probably due to the fact that thinning operations were almost completed and the cherry picking practically finished, some of the men thus released having gone to other farms. Reports of damage by hail in orchards of that district may reduce or affect the grading of the McIntosh apples, which are harvested about the beginning of September. Vernon had one of the heaviest apple crops in years, an estimated increase of 200,000 boxes over last year. As many pickers would be needed, growers were sent to the prairies to try to secure help. At Penticton, apricots were nearly at their peak. Many of the logging camps had re-opened, some with reduced crews. The demand continued heavy for all classes of sawmill workers, particularly yardmen and lumber pilers. More men had been placed in mining, but many more experienced miners and muckers were badly needed. The fishing industry also requested labour and salmon canneries along the Skeena River wanted cannery help for the summer season. Machine and foundry shops were busy and non-essential industries were finding it hard to get employees, and were accepting older men and army rejects. Shipyard tradesmen, especially welders, were urgently required. Building and highway construction continued, with carpenters, labourers, cooks and flunkeys still in demand. Railways also reported a shortage of bridge gangs and section men. Transportation by bus was much slacker, but considerable activity existed in coastwise shipping. Trade was good. Applicants for domestic service were scarce, as many preferred to work in factories, canneries or other plants, where wages were better.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

IN view of the transference of the functions of the Employment Service of Canada to the Unemployment Insurance Commission, information formerly presented in this article concerning applications, vacancies and placements made by the offices of the Employment Service will now be found in another article entitled "Activities of Unemployment Insurance Commission," under the heading "Report of Employment and Claims Offices for June, 1942." In this section information is given concerning the number of applications for work, existing vacancies and the number of placements made through the Employment and Claims Offices of the Unemployment Insurance Commission. The latest available information concerning the employment situation in Canada is also given in another section, under the heading "Employment conditions at the end of July."

The accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting June 1, was 13,069, the employees on their payrolls, numbering 1,718,329, compared with 1,674,763, in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 2,231, having an aggregate membership of 356,732 persons, 2·5 per cent of whom were without employment on July 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of June, 1942, as Reported by Employers

In accordance with the movement invariably indicated at June 1 in the period since 1920, there was a substantial increase in employment at the beginning of June of the present year. The general expansion, however, was below normal in extent, and also differed in its industrial distribution from that usually shown. On the average in the last 21 years, about 75 per cent of the total advance at June 1 has been reported by the non-manufacturing classes, roughly one-quarter taking place in the factory group. At the date under review, however, 57 workers in each 100 added to the payrolls were reported by firms in the non-manufacturing divisions, while 43 per 100 were absorbed into manufacturing establishments. The movement into the latter continued with considerable vigour; there were very important gains in employment at June 1 in the production of durable goods, while relatively little change, on the whole, took place in the non-durable classes. In the non-manufacturing industries, the advances, though fairly large, were generally on a less-than-average scale.

Statistics were received by the Dominion Bureau of Statistics from 13,069 establishments whose working forces aggregated 1,718,329, an increase of 43,566 persons, or 2·6 per cent, as compared with their employees at May 1, who had numbered 1,674,763. The index rose from its previous all-time maximum of 167·4 at May 1, 1942, to 171·7 at the date under review, when it was 12·3 per cent higher than that of 152·9 at June 1, 1941. As already mentioned, the general advance was below normal for June 1 in the experience of earlier years of the record. The seasonally-adjusted index therefore declined, falling from 173·7 at May 1, to 171·7 at the beginning of June; the latter coincides with the unadjusted figure. The corrected index at May 1 had also shown a recession from the preceding month.

The co-operating manufacturers reported a gain of 18,809 men and women; this exceeded the average at the beginning of June in the period since 1920, although it was smaller than that noted at June 1, 1941. Nearly two-thirds of the total number added to the working forces of manufacturing establishments

were reported in iron and steel plants, in which the gain was abnormally large. Other durable goods industries also showed heightened activity. On the other hand, there were considerable declines in tobacco factories, and textiles also released some employees in a seasonal movement.

Among the non-manufacturing industries, improvement was indicated in logging, mainly as a result of river-driving operations; the gain at June 1 was not equal to the average in the period since 1920. Mining, on the whole, was quieter, the moderate decline being contrary to the usual movement in the late spring. In transportation and construction there were advances which, though seasonal in character, were below normal in extent. Services and trade reported relatively small increases; these too, were less than usual for the time of year.

The upward movement in payrolls continued at June 1, although the increase was smaller than those recently reported; this was partly due to the observance of the Victoria Day holiday, which falling in the last week in May, in many cases affected the earnings disbursed

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

59212—6½

at June 1. The co-operating firms in the manufacturing, logging, mining, communications, transportation, construction, services and trade divisions reported the payment of $48,526,791 at the date under review, to their 1,718,329 employees; at May 1, the establishments had employed 1,674,763 persons, whose earnings in the week preceding had aggregated $47,888,745. The per capita average declined from $28.59 at May 1, to $28.24 at the beginning of June. The reduction in the latter, though partly due to a loss of earnings over the holiday, was also seasonal in character, considerable numbers of persons being taken on in the industries normally expanding in the early summer, in which the rates of pay are generally below the average; in any case, those newly added to the staffs are ordinarily paid at the lower rates. Including those in financial institutions, the persons in recorded employment at June 1 numbered 1,781,719, whose earnings for services rendered in the week preceding aggregated $50,440,521. This was an average of $28.31 per worker, a decline of 34 cents as compared with the weekly average earnings distributed by the same employers at May 1, 1942.

The Course of Wartime Employment

The highly seasonal character of many industries in Canada tends to invalidate comparisons of employment at different parts of

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at June 1, 1942, by the Co-operating Establishments and Aggregate and Per Capita Weekly Earnings of such Employees, together with Index Numbers of Employment and Payrolls as at June 1 and May 1, 1942, and June 1, 1941, based on June 1, 1941, as 100 p.c.

[1] This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, with the exception of electric light and power.

the year. This seasonal factor continues to nullify to some extent the value of comparisons of the levels presently existing with those indicated at the opening of the war; accordingly, the following only briefly reviews the changes in the volume of employment indicated at June 1, 1942, as compared with September 1, 1939.

Extremely important expansion has been shown in the Dominion during the first thirty-three months of the war; the interruptions in the generally upward movement have been almost wholly due to seasonal contractions in the divisions peculiarly subject to such influences. Although these factors have recently lowered employment in a number of groups in both manufacturing and non-manufacturing classes, the general index has risen by 43·6 per cent between September 1, 1939, and June 1, 1942. The importance of this gain is emphasized by comparison with that of about 14½ per cent in the five years ending in 1939, while in the period from 1921 to 1939, the general index rose only by approximately 28 per cent.

For obvious reasons, the response of the manufacturing industries to war-time demands has been substantially greater than that of any other class. From September 1, 1939, to June 1, 1942, the index number of employment in factories rose by 78·6 per cent, while the general increase in the non-manufacturing groups, in spite of important seasonal curtailment in some branches (notably construction), was 8·3 per cent.

The durable goods industries have shown especially impressive gains; the index number in this class has risen from 100·4 at September 1, 1939, to 245·3 at June 1, 1942, or by 144·3 per cent. The number of persons employed in the manufacture of "heavy" goods constituted some 54 per cent of all those engaged in manufacturing at June 1, 1942. This proportion greatly exceeded that of 40 per cent reported in the durable goods industries at the outbreak of hostilities.

Employment in the non-durable goods class has also shown pronounced expansion during the period of the war, the index rising from 126·6 at September 1, 1939, to 175·4 at June 1, 1942. This was an increase of 38·5 per cent. Activity in these industries is ordinarily quieter in the early part of the summer than it is later on when the active season is underway in certain industries, notably the food preserving. In spite of this factor (which also operates in the case of some lines in the durable goods category) employment in the large majority of manufacturing industries was considerably brisker at the latest date than it was at September 1, 1939.

Although there has been important seasonal

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

curtailment during the winter and early spring in construction and some other classes, employment in the non-manufacturing group as a whole was, as already stated, 8·3 per cent higher than at September 1, 1939. Seasonal changes in these divisions are largely responsible for the decline in this rate of increase from 14·6 per cent at September 1, 1941, over September 1, 1939, when the seasonal factor did not complicate the comparisons. The following are the percentage increases in the index numbers in the indicated industries in the first thirty-three months of the war; logging, 180·3 per cent, mining, 3 per cent,

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

communications, 19 per cent, transportation, 18·2 per cent, services, 19·1 per cent, and trade, 13·9 per cent. In construction as a whole, on the other hand, there was a loss of 19 per cent. In building, the increase of 72·5 per cent at June 1, 1942, as compared with September 1, 1939, largely resulted from wartime requirements. There was also a gain of 24·8 per cent in this comparison in the staffs of railway construction and maintenance departments. On the other hand, highway construction showed a large decline from September, 1939, the index being lower by 66·3 per cent. The loss was partly seasonal in character, but was also due to the established policy of postponing all but essential work until after the war, while in 1939 a considerable program of road work for the relief of unemployment was in progress.

Statistics of Earnings

The present tabulation of statistics of weekly payrolls is the sixteenth in the record, the first material of the kind in the Dominion having been collected with the employment data for April 1, 1941. The information received in the first two tabulations was incomplete, mainly because many employers were unable to furnish the additonal statistics without a period of preparation; the payroll figures obtained in the surveys for April 1 and May 1, 1941 are consequently not wholly comparable with those since tabulated, and have been disregarded. The present report is therefore the first in which comparisons can be made with the same period of last year, the comparisons necessarily being effected mainly through the use of index numbers. The table which formerly gave statistics of the number of employees and their weekly earnings accordingly now also contains index numbers of employment and payrolls for the same period of a year ago.

The base used in making these index numbers (namely, the amounts distributed on or about June 1, 1941, for services rendered in the week preceding), was selected as being the first period in the current record for which the statistics were thoroughly representative, and comparable with the data subsequently tabulated.

In connection with the index numbers of payrolls, it must be noted that the basic period used in calculating the index is too short to be entirely satisfactory, particularly as the Victoria Day holiday in some cases affects the payrolls distributed on or about June 1. The entire experience with the payroll data is, indeed, extremely brief, and the difficulties normally attendant upon the organization of any statistics built up from so many units have been greatly increased by those resulting from wartime conditions. There is considerable evidence that the payroll data, like those of employment, are thoroughly representative, but at the present stage in their development, they must nevertheless be considered as subject to revision.

To establish some basis of comparison with earnings in immediately preceding years, the following gives the per capita average earnings of those employed by the manufacturers furnishing information for June 1, 1942, and June 1, 1941, together with the weekly average earnings of all persons employed in the manufacturing industries, according to the Census of Industry for 1939 and 1940; the latter averages result from the division of the annual average payroll by 52 weeks. The data are not entirely comparable, since the Census enquiries include a large number of smaller establishments excluded from the current surveys; the important and growing degree of labour dilution as the war progresses, however, probably tends to increase the comparability of the current averages with those for immediately preceding periods.

Average Per Capita Weekly Earnings

Industries	June 1[1] 1942 $	June 1 1941 $	Annual[2] Average 1940 $	Annual[2] Average 1939 $
Vegetable products	24 70	23 26	20 77	20 15
Animal products	24 09	21 83	19 64	18 92
Textiles and textile products	20 24	18 66	18 43	17 02
Wood and paper products	27 13	25 38	23 16	21 96
Iron and its products	33 59	29 78	28 41	25 19
Non-ferrous metal products	30 97	27 53	26 79	25 75
Non-metallic mineral products	31 00	28 58	26 41	25 12
Chemicals and allied products	27 92	26 67	26 84	26 87
Miscellaneous industries	25 13	22 33	21 44	20 42
Total	28 69	25 53	23 23	21 56

[1] The average weekly earnings of those employed at June 1, 1942, by the 7,192 co-operating manufacturing establishments (excluding central electric stations); in the main, the current surveys are limited to returns from firms employing fifteen persons and over.

2 The Census of Industry takes in all establishments, irrespective of size; the number reporting in 1940 was 25,513. It is probable that the payrolls disbursed in the smaller factories tend to be below the general average, partly because the majority of the smaller establishments belong in the industrial groups in which wages are relatively low. The plants furnishing monthly returns on employment, employed approximately 85 per cent of the total number of persons reported in all manufacturing establishments in 1940.

The value of the above comparisons will be greater when overlapping figures from the Census of Industry are available, but in the meantime, it is felt that a certain interest attaches to the data as indicative of the trends of the average earnings of those engaged in manufacturing. Despite the dilution of labour, the typical wage-earner in factories is now receiving a larger pay envelope than in any preceding period; the benefit of this is, of course, partly offset by higher living costs, and greatly increased taxation. With additional members of the family in employment, the earned income of the average family has obviously grown to a considerably greater extent than that of the individual wage-earner. The increase in the weekly average between June 1 of 1941 and 1942, is partly due to the more general payment of the cost-of-living bonus from last October under the terms of P.C. 8253, together with extensive overtime work and the growing concentration of workers in the more-highly paid heavy industries.

Payrolls at June 1, 1942.—The 13,069 establishments in the eight leading industrial groups throughout Canada furnishing information at the beginning of June, reported the distribution of $48,526,791 in weekly salaries and wages to the 1,718,329 men and women on their staffs at that date. These same employers had reported 1,674,763 workers at the first of May, whose earnings in the week preceding had amounted to $47,888,745. This gain of 2·6 per cent in the number in recorded employment at June 1 was accompanied by an increase of $638,046, or 1·3 per cent, in the aggregate payroll. The per capita weekly average, at $28.24, was lower by 25 cents than the previous maximum average of $28.59 paid at May 1. The observance of the Victoria Day holiday lowered the earnings of many individuals, while the fact that there was a considerable growth in employment among those whose rates of pay are below the present generally-high average, also contributed to this reduction.

In the last report on employment and payrolls, the earnings of the 1,674,665 employees of the 13,064 firms furnishing data were given as $47,887,408, paid on or about May 1 for services rendered in the last week in April. The per capita average based on this total was $28.60; the revised figure for May 1 is $28.59.

Table 1 contains a summary of the statistics for the provinces, the eight leading cities, and the main industrial groups.

Index Numbers of Earnings.—The recent movements of employment and earnings in the eight leading industries, and in manufacturing as a whole, are shown for the Dominion in the following table; the index numbers of employment have been converted from their original base, 1926=100, to June 1, 1941, for comparison with the index numbers of payrolls.

Index Numbers of Employment and Payrolls, based on June 1, 1941=100, Together with Per Capita Weekly Earnings.

1941	All Industries Index Numbers of Employment	All Industries Index Numbers of Aggregate payrolls	All Industries Per Capita earnings	Manufacturing Index Numbers of Employment	Manufacturing Index Numbers of Aggregate payrolls	Manufacturing Per Capita earnings

June 1	112·3	125·6	28 24	122·6	137·9	28 79

[1] Revised.

The increase of 12·3 per cent in recorded employment since June 1 of last year has been accompanied by a gain of 25·6 per cent in the aggregate salaries and wages distributed by the co-operating establishments. As already explained, the latest index of payrolls would have been higher were it not for the fact that many businesses were wholly or partly closed on Victoria Day. The changes recorded in the cost-of-living index in the elapsed months of 1942 have not sufficed to alter the rate of the cost-of-living bonus as established late in 1941; from June 1, 1941, to June 1, 1942, this index has risen by 5 per cent.

Manufacturing.—In the manufacturing division, the index numbers of employment and payrolls have shown especially large advances in the period for which data have been prepared. A rise of 22·6 per cent in employment since June 1, 1941, has been accompanied by a gain of 37·9 per cent in the aggregate

payrolls distributed. The per capita figure, at $28.79 paid on or about June 1, was lower than at May 1, or April 1, being affected by the observance of Victoria Day; the considerable growth in several industries in which the rates of pay are below the general level presently existing, also contributed to this reduction in the average. Nevertheless, the latest per capita figure represented an increase of $3.22 since June 1, 1941, in the weekly average. This increase which is particularly impressive in view of the continued dilution of labour, partly represents the payment of higher wage rates over the twelve months, and a more extensive use of the cost-of-living bonus, but is also partly accounted for by growing activity in the heavy manufacturing industries, together with overtime work.

Earnings by Industries

The employees on the payrolls of the co-operating manufacturers throughout the Dominion, numbering 1,072,407, were paid $30,873,429 for their services in the preceding week. The same firms had employed 1,053,598 persons at the beginning of May, when they had reported the distribution of $30,753,218 in weekly earnings to their staffs. There was thus a gain of $120,211 in the payroll of factory employees for the week ending June 1; the increase of 1·8 per cent in the reported number of employees was accompanied by that of 0·4 per cent in the aggregate payrolls, which, as elsewhere mentioned, were lowered by the observance of the Victoria Day holiday by many establishments.

There was a further important advance in the number engaged in the heavy industries, in which took place most of the increase in the payrolls. In many establishments the cessation of work over the holiday reduced the amount distributed in earnings, with the result that the percentage gain in the latter was smaller than that in employment. The number in employment increased by 3·1 per cent, while the payrolls rose by 1·7 per cent from May 1. The index of employment in the production of durable goods advanced from 129·2 at May 1 to 133·2 at June 1, while the corresponding index numbers for the payrolls were 151·0 and 153·7. In iron and steel, employment has risen by 45½ per cent, and the reported earnings by 65·7 per cent in the twelve months ending June 1, 1942; the advances in shipbuilding in this period have been even more impressive, amounting to 131·5 per cent in employment and 185·7 in earnings.

In the non-durable products group, there was a general gain of 0·2 per cent from May 1, but, as a result of the holidays, the earnings declined by 1·6 per cent. The index of employment in this class has risen by 13·1 per cent from June 1, 1941, while the increase in the indicated payrolls has amounted to 21·4 per cent.

Logging.—Employment in logging was more active, largely due to river driving operations; the gain amounted to 6·6 per cent, while the aggregate payrolls rose by 3·3 per cent. As a result of these changes, the per capita weekly average showed a decline, falling from $21.30 paid at May 1, to $20.65 paid at June 1. The difference is largely due to the fact that those newly added to the staff usually commence at the lower rates of pay. The figures of payrolls given in this report make no allowance for the value of board and lodging, frequently a part of the remuneration of employees in logging camps.

Mining.—There was a further seasonal reduction of 0·2 per cent in employment in mining, in which the reported aggregate of earnings decreased by 1·3 per cent. The statistics show that 80,887 persons were paid $2,787,314 at June 1; this was a per capita figure of $34.46. The average pay envelope of those employed at May 1 had contained $34.83. The observance of the Victoria Day holiday lowered the latest average.

Communications.—In communications there was an increase of 0·2 per cent in employment, while the recorded payrolls rose by 1·3 per cent. Accordingly, the average earnings showed an advance, rising from $27.71 at May 1, to $28.01 paid at June 1.

Transportation.—The transportation industries reported an aggregate working force of 134,123 men and women at June 1, when the weekly earnings distributed amounted to $4,645,675. The former figure was higher by 2·3 per cent than that at May 1, while the payrolls increased by 2·7 per cent. The average earnings were rather higher, the per capita figure being $34.64, compared with $34.49 paid at May 1.

Construction.—Seasonal improvement was indicated in construction, in which the personnel increased by 12·8 per cent, and the aggregate payrolls in the group as a whole by 11 per cent. There was expansion in employment and earnings in building, highway and railway construction and maintenance. The per capita average earnings gained in railway construction and maintenance; in the highway group they were practically unchanged, while those in building were smaller, partly as a result of the holiday. The average in construction as a whole was also less, falling from $25.73 at May 1, to $25.32 at June 1.

Services.—The service establishments furnishing returns reported 2·5 per cent more employees, with an increase of 1·7 per cent

in the reported payrolls. The average earnings were therefore lower, declining from $17.30 at May 1, to $17.17 at June 1. These averages are lower than in any other industrial group, partly because of considerable proportions of female and part-time workers, and partly because the earnings quoted exclude the value of board and lodging, in many cases a part of the remuneration of employees in hotels and restaurants. This group accounts for some 60 per cent of those included in the service industry.

There was a gain of 0·2 per cent in the employees indicated in trade, in which the aggregate payrolls distributed were lower by 0·3 per cent, the loss being largely due to the observance of Victoria Day. The per capita earnings were therefore rather lower, being $24.03 at June 1, as compared with $24.15 at May 1.

Finance.—In the financial group, 63,390 men and women were reported to have been paid $1,913,730 at June 1, a per capita average of $30.19. In the last return, the employees of the co-operating financial institutions had aggregated 63,353, with weekly earnings of $1,907,662; this was an average of $30.11 per person. The inclusion of the data for the financial division changed the general per capita figure of earnings in the Dominion to $28.31 at June 1, while without the latter statistics, the weekly average was $28.24.

Earnings by Provinces

Firms in all provinces reported increases in employment as compared with May 1, and in all except Nova Scotia and Ontario, the aggregate weekly payrolls disbursed were also higher, although in several cases the percentage gains in the latter were not equal to those in the number of workers absorbed by industry. This was partly due to the observance of the Victoria Day holiday, and partly to the fact that those added to the staffs are usually taken on at the lower rates of pay. In Prince Edward Island, Manitoba, Alberta and British Columbia, the per capita averages were higher, but in the remaining provinces they were lower than at May 1.

Earnings by Cities

Employment in the eight leading cities showed an upward movement at June 1; in Montreal, Quebec, Windsor, Winnipeg and Vancouver, the reported payrolls were also higher. In Toronto, Ottawa and Hamilton, on the other hand, the salaries and wages disbursed were lower. This was largely due to the observance of Victoria Day. Mainly as a result of this holiday, the per capita averages were lower, except in Quebec City, Windsor and Vancouver, where the highest averages yet recorded in these cities were indicated at June 1.

Employment by Economic Areas

The trend of employment was upward in each of the provinces, with firms in Quebec and Ontario showing the greatest expansion. Except in the Maritime Provinces, the general percentage gains were slightly below normal for June 1, according to the experience of the years since 1920. Industrial activity in the various areas, however, continued at an exceptionally high level.

Maritime Provinces.—Considerable increases were reported in Prince Edward Island, Nova Scotia and New Brunswick, according to statistics received from 936 employers in these provinces with a combined working force of 124,344 persons, as compared with 117,262 at May 1. This gain of 6 per cent exceeded the average at June 1 in the years for which data are available. The latest index, at 166·1, was 9 per cent higher than the June 1, 1941, figure of 152·4, previously the maximum for that date.

Manufacturing showed decided expansion at the date under review, particularly in the lumber and animal food divisions; logging, trade and construction also afforded more employment, the advance in the last-named being greatest. On the other hand, transportation and coal-mining were seasonally slacker.

The 891 firms reporting for June 1, 1941, had employed 115,291 workers, or 13,671 more than at the beginning of May of last year.

Quebec.—Improvement was indicated in the great majority of industrial groups in Quebec; manufacturing, logging, transportation and construction recorded especially pronounced additions to the personnel, and there were smaller increases in services. On the other hand, little general change was noted in mining and communications, while employment in trade was reduced. Within the manufacturing division, textile, electrical apparatus, lumber, iron and steel and non-ferrous metal plants reported the greatest advances, but the trend was also upward in the food, pulp and paper, tobacco, beverage, musical instrument, clay, glass and stone and many other industries.

Statements were tabulated from 3,300 firms employing 533,673 workers at June 1, 1942, 14,318 more than in their last monthly report. The general gain indicated by the employers making returns was below the average for June 1 in the experience of the years, 1921-1941; it was also decidedly smaller than that noted at the same date of last year, when

the co-operating establishments, numbering 3,133, had reported 457,959 employees, as compared with 426,019 in the preceding month.

Ontario.—There was considerable expansion in operations in manufacturing, logging, transportation and construction and maintenance at June 1, 1942, together with small increases in employment in mining, services and trade. Within the manufacturing division, iron and steel plants showed the greatest additions to the forces. There was also improvement in the lumber, food, chemical, pulp and paper, electrical appliance, non-ferrous metal and miscellaneous manufacturing industries. On the other hand, textile and tobacco factories released large numbers of workers, and smaller losses took place in the leather, rubber, beverage and a few other classes. In some cases, the declines were seasonal in character.

The staffs of the 5,637 co-operating establishments in Ontario aggregated 724,484 at the latest date; as compared with 713,994 at May 1, this was an increase of 10,489 employees, an advance that was rather less-than-average in the experience of past years. The general index of employment, at 178·5 at June 1, 1942, was higher than in any other month in the record. A combined staff of 657,368 had been reported by the 5,419 concerns furnishing data for the same date last year.

Prairie Provinces.—Construction (building, highway and railroad), transportation and manufacturing showed heightened activity in the Prairie Provinces, while the trend was also favourable in mining, communications, services and trade. In the group of factory employment, the movement was generally upward. The largest additions to the staffs were in iron and steel, chemical, food, petroleum and lumber works. The expansion resulted in a generally higher level of employment than in any other month in the years since 1929.

The 1,810 firms whose statistics were tabulated reported 185,886 employees, as against 177,126 in the preceding month. Improvement was noted at June 1 in Manitoba, Saskatchewan and Alberta. Rather smaller increases, on the whole, had been indicated at June 1, 1941, when the 1,789 establishments making returns had employed 173,683 workers, compared with 167,434 at May 1.

British Columbia.—An aggregate working force of 149,942 men and women was reported by the 1,386 co-operating employers, who had 147,026 persons on their payrolls at the beginning of May. The latest increase approximated the average at June 1 in the years since 1920; it rather exceeded that noted at the same date in 1941. The index of employment at June 1, 1942, reached a new maximum; standing at 161·9, it was 20 per cent higher than at the beginning of June of last year.

Manufacturing generally recorded improvement, that in iron and steel factories being most pronounced. Lumber mills, however, were slacker; this was attributed in part to shortage of labour. Among the non-manufacturing groups, mining and construction showed heightened activity; the trend was slightly favourable in trade, services and communications, while transportation was quieter.

For June 1, 1941, statements had been received from 1,319 employers of 124,533 persons.

Table II gives index numbers by economic areas.

Employment by Cities

The trend was favourable in each of the eight cities for which separate compilations are made, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver showing heightened activity. The largest additions to the staffs were reported in Montreal, Toronto, Windsor and Vancouver. Except in Ottawa and Winnipeg, the index number of employment in each of the eight centres was higher than at any other month in the record.

Montreal.—Further marked improvement was shown in Montreal, where the 1,923 co-operating firms employed 253,106 persons, or 5,834 more than at May 1. Manufacturing reported a large increase, most of which took place in iron and steel; there were also gains in textile, musical instrument, beverage, non-ferrous metal and electrical apparatus factories; on the other hand, the leather division was quieter. Among the non-manufacturing division, transportation, building and services afforded more employment, while trade showed a falling-off. The index, at 166·8, was nearly 26 points higher than in June, 1941; a smaller advance had then been recorded in the 1,817 establishments from which information was received, whose employees had numbered 213,752.

Quebec.—There was a further rise in industrial activity in Quebec City; most of this took place in manufacturing, but transportation, services and trade also reported slight improvement. Statements were tabulated from 228 employers having 30,762 workers, as against 29,964 in the preceding month. Expansion on much the same scale had been indicated at the beginning of June of a year ago, but the level of employment was then much lower, according to information from 216 firms with a force of 22,613 men and women.

Toronto.—Returns were furnished by 1,971 business houses in Toronto with 230,939 employees, compared with 227,403 at May 1. Manufacturing as a whole was decidedly brisker; the greatest gains were in iron and steel plants, but chemical, printing and publishing and miscellaneous manufacturing factories were also busier. Among the non-manufacturing classes, transportation was more active; construction, services and trade, however, released small numbers of workers. The general index in Toronto, at 179·7, was many points higher than at June 1, 1941, when statistics from 1,881 establishments indicated a combined staff of 196,336, or 4,579 more than at the beginning of May of last year.

Ottawa.—Moderate improvement was noted in manufacturing, transportation, services and trade in Ottawa. A total working force of 20,783 men and women was employed at June 1, 1942, by the 250 co-operating firms, who had 20,633 on their payrolls in the preceding month. At the same date of last year, 241 establishments had reported a staff of 19,834, a gain of 601 from their May 1, 1941, forces; the index was then six points lower than that of 157·7 at June 1, 1942.

Hamilton.—There was a further increase in Hamilton, where data were furnished by 347 employers who had 60,705 persons on their paylists, or 391 more than at the beginning of May. This advance was much smaller than that indicated at June 1, 1941; employment then, however, was not so active, the latest index, 185·9, being considerably above that of 161·9 at the same date of last year.

Improvement was noted at the date under review in manufacturing, mainly in iron and steel products, and in construction, while transportation and trade showed relatively small losses. The 348 concerns reporting for June 1, 1941, had employed 52,826 workers; the index then stood at 161·9, compared with 185·9 at June 1, 1942.

Windsor.—Employment again advanced in Windsor at June 1, when statistics were received from 204 firms with 37,940 employees, an increase of 1,436 since the beginning of May. There was a moderate gain in food and some other manufacturing classes, together with considerable expansion in iron and steel factories. The non-manufacturing divisions reported a decline on the whole, mainly in construction. At the corresponding date of last summer, a smaller increase had been indicated by the 195 co-operating establishments, whose staffs aggregated 31,475; employment then was at a much lower level than at the latest date, when the index stood at 279·2, the highest to date.

Winnipeg.—A personnel of 55,369 men and women was reported by the 560 Winnipeg employers whose statistics were compiled, and who had 54,400 employees at May 1. Most of the gain took place in manufacturing and transportation, while retail trade afforded rather less employment. The general increase was slightly smaller than that noted at the beginning of June of last year, when 553 returns had been tabulated, showing a combined working force of 50,993 persons, as against 49,720 in the preceding month. The index then stood at 122·2, compared with 132·8 at June 1, 1942; the latter is higher than in any other month in the record except the last two of 1941.

Vancouver.—Manufacturing was decidedly more active, especially in plants turning out iron and steel products. In the non-manufacturing divisions, transportation was slacker; construction reported considerable improvement and there were slight gains in services and trade. Statements were tabulated from 607 firms with 69,983 workers, as compared with 68,461 at May 1, 1942. A smaller advance had been made at June 1 of a year ago, according to statistics from 582 establishments with 49,987 persons on their staffs, an increase of 237 over the month. Employment then, however, was generally quieter, the index being nearly 56 points lower than that of 197·7 indicated at the beginning of June of this year.

Employment by Industries

Manufacturing.—The number of persons engaged in manufacturing operations throughout the Dominion continued to increase, the expansion at June 1 being the fifth reported in as many months. The advance considerably exceeded the average at June 1 in the experience of other years in the record, although it was not equal to that reported at June 1 of 1941, and a few earlier summers.

The 7,294 establishments furnishing data reported an aggregate of 1,072,407 employees, as compared with 1,053,598 at May 1. The index rose from 202·3 at that date to 205·9 at the beginning of June, when it was 22·6 per cent higher than at June 1, 1941. The seasonally-adjusted index also showed an upward movement, standing at 201·9 at the latest date, as compared with 200·8 in the preceding month, previously the maximum.

Particularly outstanding gains were indicated at the date under review in iron and steel products. The number of persons taken on in that group has not often been exceeded in the period for which statistics are available; it is also substantially greater than that noted in any other June in the period of observation. The manufacturers furnishing data in this industry reported the addition of 12,145 workers to their staffs. The lumber, food, pulp and paper, electrical apparatus,

non-ferrous metal and miscellaneous manufacturing industries also showed pronounced increases in personnel. In some cases, notably lumber products, however, the improvement was on a scale below the average for June 1, according to the experience of past years. To some extent, this resulted from shortage of labour.

In addition to the above increases, there were gains on a smaller scale in the production of beverages, chemicals, clay, glass and stone, miscellaneous non-metallic mineral products (chiefly petroleum), and miscellaneous manufactured products. On the other hand, leather, rubber, textile and tobacco factories were slacker, the losses being partly seasonal in character; the decline in the textile group was not equal to the average at June 1 in past years.

Logging.—River-driving operations resulted in a considerable increase in employment at the beginning of June. The number of persons added to the payroll, however, was smaller than usual for the season. Returns were received from 437 employers with a staff of 50,128 persons, as compared with 47,027 at the beginning of May. A very much larger gain had been reported at June 1, 1941, but the index number then was over 10 points lower than the latest figure of 169·0.

Mining.—Seasonal curtailment was indicated at the beginning of June in coal-mining, while there was moderate improvement in the extraction of other non-metallic mineral products, and in metallic ore mining; the trend in the group as a whole was unfavourable. The decline was contra-seasonal. Statistics were tabulated from 430 mine operators, employing 80,887 persons, as compared with 81,076 at the beginning of May. The June 1 index, at 173·1, was several points lower than that of 177·2 at June 1, 1941.

Communications.—There was slight improvement in the telephone and telegraph division; 61 companies and branches in the communications group employed 27,745 workers, or 43 more than at May 1. Employment was brisker than at the beginning of June of last year, although the increase in personnel then reported had been very much larger.

Transportation.—The trend was decidedly upward in transportation. Greater activity was shown in all three branches—local transportation, shipping and stevedoring and steam railway operation. Data were received from 559 firms and divisional superintendents in this group, with 134,123 workers on their payrolls, as compared with 131,134 at May 1. This advance was seasonal, but was below-average in extent; nevertheless, the index, at 106·4, was the highest for June 1 in any summer since that of 1930.

Construction and Maintenance.—Further important additions to the payroll were indicated in building, highway and railway construction and maintenance; 1,471 employers reported a staff of 155,035 persons, as compared with 137,444 in the preceding month. This gain of 17,591 workers was smaller than usual for June 1 in the years since 1920. The index of employment in construction as a whole was lower than at June 1, 1941, but was otherwise the highest for that date in any year since 1931.

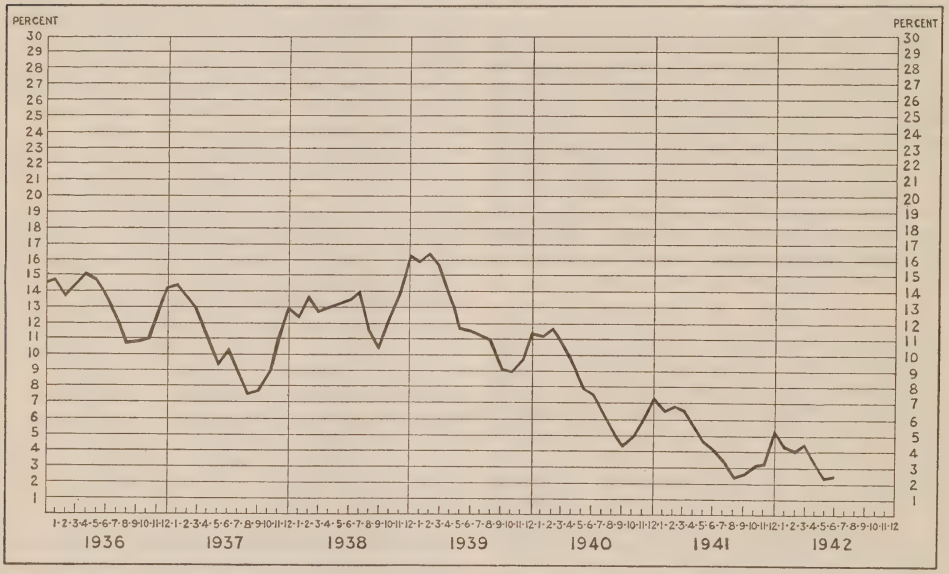
Services.—Hotels and restaurants showed the customary seasonal increase, and laundries and dry-cleaning establishments also recorded some improvement. Statements were compiled from 618 firms employing 40,250 persons, as compared with 39,272 at May 1. Employment in this group was brisker than at the same date of last year, when the reported additions to staffs had been on a larger scale.

Trade.—Further moderate gains were indicated in retail trade, while there was practically no change in the wholesale division; the increase in trade as a whole was considerably below-average for the beginning of June in the experience of years since 1920. The 2,199 co-operating establishments reported 157,754 employees, compared with 157,510 in the preceding month. Much greater improvement had been reported at June 1, 1941. For the second consecutive month, employment in trade was at a level slightly lower than at the corresponding date of last year. However, the index was higher than at June 1 in any earlier summer.

Financial Institutions.—Statistics collected from banks, trust companies and stock market operators show that at June 1, 759 firms and branches in these lines of business employed 63,390 persons, compared with 63,353 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communication, construction, service and trade industries brings the total number of employees included in the June 1 survey of employment to 1,781,719 in 13,828 establishments, and lowers the index of 171·7 in the industries above enumerated, to 169·3; the May 1 index of 167·4 was lowered by the inclusion of the date from financial institutions to 165·2, while that for June, 1941, stood at 151·2 when such returns were included, as compared with 152·9 for the industries above enumerated.

Table III gives index numbers of employment by industries.

Unemployment in Trade Unions at the Close of June, 1942



Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference, only, to the organizations reporting.

There were 2,231 reports tabulated in June from unions having an aggregate membership of 356,732. Of these 9,092, or a percentage of 2·5 were unemployed; a great number of these members, however, were laid off, temporarily. The unemployment percentage in the previous month was 2·4, and in June, a year ago, it was 4·1.

The very slight adverse change, which was reflected in the June reports from the previous month was due principally to the seasonal decline in work for clothing workers, the unemployment percentage in this group, increased from 3·3 to 13·7 per cent in June. This contraction was offset, in part by the noteworthy improvement shown for union members in the building and construction trades, and in coal mining. As will be seen in Table II, the percentage of unemployment among building workers stood at 5·8, compared with 8·4 per cent in May; among coal miners the percentage of those who were without work declined from 3·8 to 1·8 per cent in June.

Table I shows the percentages in trade unions by provinces. It will be observed that these range from 0·9 per cent of unemployment in Saskatchewan and British Columbia to 4·7 per cent in New Brunswick. Considerably better conditions were reflected in reports received from unions in Alberta. Unemployment in that province stood at 2·6 per cent, compared with 4·5 per cent in May; the improvement indicated was due principally to the re-employment of coal miners. In Manitoba there were 1·1 per cent of the members without work; this was a considerable employment advance over May when the percentage was 2·7. Fractional employment increases, only, were noted in Nova Scotia, Ontario, Saskatchewan and British Columbia. Seasonal contractions among garment workers accounted largely for the decline in work as reflected by Quebec reports, the unemployment percentage in that province standing at 4·6, in comparison with 2·8 per cent in the preceding month. Reduced employment was in evidence, likewise, in New Brunswick, where the percentage increased from 1·6 to 4·7. In comparison with the situation in June, 1941, when 11·5 per cent of the members were without work, Alberta unions reported pronounced expansion in employment; this improvement

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

was due to the very much better conditions prevailing among coal miners. Appreciable employment increases were apparent in British Columbia and Manitoba. Minor improvement was observed in Quebec, while among members in Ontario and Saskatchewan there were fractional employment advances, only. On the other hand, among New Brunswick members there was a moderate reduction in available work.

A separate compilation is made each month of unemployment among trade union members in the largest city, in each province with the exception of Prince Edward Island. The percentages of those who were without work in these cities ranged from 0·6 in Regina to 5·7 in Montreal. Much higher employment levels than those shown in May, were apparent in Winnipeg and Regina. The percentage of members reported as without work in these cities, declining from 3·2 to 1·2 in Winnipeg and from 2·9 to 0·6 in Regina. Employment in Toronto, Edmonton and Vancouver stood at very high levels; although the improvement over May was, in each case, fractional, only. Some contractions in work were apparent in Halifax and Saint John. In these cities the percentage of unemployment stood at 2·6; this was in comparison with percentages of 1·4 and 0·6 respectively, reported by these members in May. Seasonal conditions contributed to the rather noteworthy contraction in employment for Montreal members; the unemployment percentage in that city advanced from 2·6 to 5·7 per cent. In comparison with the situation, as reported in June, a year ago, Edmonton members were much better employed. The percentage of those reported as without work in that city was 1·3, in comparison with 7·3 in June, 1941. Noteworthy employment expansion was apparent in Winnipeg, Vancouver and Halifax, while lesser improvement was noted in Toronto and Regina; a fractional employment advance was observed in Saint John.

There were 726 reports tabulated from unions in the manufacturing industries, whose combined membership was 181,628 persons. Of these 5,007, or a percentage of 2·8 were without work, in comparison with percentages of 1·9 in May and 3·1 in June, a year ago. In comparison with the preceding month, unions of tailors indicated that the membership was fully employed, in contrast with 11·0 per cent reported out of work in May; the total membership of these unions is not very large and the change did not involve many members. Among chemical workers, whose membership is small, also, the percentage of those out of work, dropped from 19·4 to 2·9. Noteworthy employment expansion was reflected in reports received from unions of fur workers, 1·3 per cent of whom were unemployed, in comparison with 10·5 per cent in May. Among metal polishers there was a slight improvement, very little unemployment was reflected in reports from these workers. The percentage of those without work among leather workers declined from 7·1 to 6·3. Bakers and confectioners, electric current employees and textile and carpet workers were reported as fully employed; which was a fractional improvement in each case over May returns. The percentage of unemployment among iron and steel workers was 1·1; these members likewise indicated slightly better conditions. The high level of employment in the printing trades remained unchanged; the unemployment percentage standing at 1·9. Among the unions in which the members were fully employed, in both months, were soft drinks, cigar and tobacco, hat, cap and glove workers, butchers, meat and fish packers, rubber, jewel-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

lery, aluminum and gas workers. Among pulp and paper mill workers the percentage of those who were reported as without work, increased fractionally from 0·5 to 0·8, while among clay, glass and stone workers the unemployment percentage increased from 0·2 to 1·7 per cent. An appreciable reduction in employment was apparent among members in the miscellaneous manufacturing group, 23·1 per cent of these workers were reported, as unemployed, in comparison with 16·2 per cent in May. Among garment workers there was 13·7 per cent reported as without work, compared with 3·3 in the preceding month; this marked contraction was due to between season conditions. In comparison with the situation in June, 1941, leather and hat, cap and glove workers, were much better employed. A considerably higher employment level was manifested among printing tradesmen. Bakers and confectioners, were reported as having adequate work in comparison with 2·1 per cent of unemployment a year ago. Conditions among butchers, meat and fish packers were similar, these members being reported as fully employed, compared with a percentage of 1·1 out of work, in June, 1941. Among soft drink workers, woodworkers, textile and carpet workers, fur workers, iron and steel tradesmen and metal polishers employment was fractionally higher. As was the case a year ago, cigar and tobacco workers, electric current employees, tailors, rubber, jewellers, and gas workers, indicated that their memberships were fully employed. On the other hand, among garment workers, there was a substantial reduction in work, while the percentage of unemployment among workers in the miscellaneous manufacturing group, showed a marked increase.

Returns were tabulated from 51 unions of coal miners, whose total membership was 19,395 persons, of whom, 348, or a percentage of 1·8 were unemployed, in comparison with 3·8 per cent in May and 9·3 per cent in June, a year ago. In comparison with the preceding month, Alberta unions reported substantial betterment, unemployment among the members in that province, dropping from 9·3 to 4·0 per cent. In Nova Scotia there was a slight gain although there was very little unemployment in either month; the comparative percentage being 2·2 and 1·1 respectively; in British Columbia the unemployment percentage was 0·1 compared with 0·2 in May. Among New Brunswick members, as in May, no unemployment was indicated. In comparison with conditions at the close of June, 1941, Alberta unions indicated a pronounced expansion in work, the percentage of those without employment declining from 30·2 to 4·0; in British Columbia the increase in available work was impressive also, the percentage in this case was reduced from 13·0 to 0·1. New Brunswick members were fully employed at both dates; in Nova Scotia there was a fractional decrease in available work.

Reports were tabulated from 8 unions in the non-metallic minerals group, having a combined membership of 4,158 persons, of whom, 217, or a percentage of 5·2 were without work, in comparison with 4·8 per cent in May and 31·0 per cent in June, a year ago.

Among unions in the building and construction trades there were 227 reports tabulated. These organizations had a combined membership of 32,422 persons, 1,886 of whom, or a percentage of 5·8, were unemployed, in comparison with 8·4 per cent in the preceding month, and 7·9 per cent in June, 1941. In comparison with May, conditions were much better among granite and stonecutters, the unemployment percentage declining from 21·0 to 5·7. As the membership in these groups is not large the change did not involve many members. Among bricklayers, masons and plasterers and carpenters and joiners, there was an appreciably higher employment level, the percentages in the first-named trade were 22·0 in May and 14·5 in June, while among carpenters and joiners the percentage of unemployed members declined from 7·8 to 5·5. The percentage of those who were without work among plumbers and steamfitters declined from 6·8 to 4·2; among painters, decorators and paperhangers, there was fractional unemployment, only, in comparison with 2·1 per cent of the members reported as without work in the preceding month. As in May, very little unemployment prevailed among electrical workers; employment, however, attained a fractionally higher level. Among the trades with smaller memberships reports received from unions of bridge and structural iron workers, lathers and steam shovel men reflected slight recessions in available work, the percentage of unemployment increased from 8·8 to 10·8 for steam shovel men and from 5·6 to 6·7 for bridge and structural iron workers, and for lathers from 8 per cent to 12·6. Among hod carriers and miscellaneous building workers there was an appreciable reduction in employment, the percentage of those without work stood at 6·1, compared with 3·7 in the preceding month. In comparison with returns received at the end of June, 1941, bricklayers, masons and plasterers, reported appreciable employment expansion, while among carpenters and joiners there was a moderate betterment. Minor employment increases occurred for hod carriers and miscellaneous building workers and painters,

decorators and paperhangers; among the latter members employment was high at both dates. Among electrical workers the unemployment percentage was 0·1, compared with 0·3 per cent, a year ago. The percentage of unemployment among granite and stonecutters showed a marked decline standing at 5·7 as compared with 35·5, in June, 1941. Lathers reflected a fair improvement, while on the other hand a fractional contraction was observed among plumbers and steamfitters. Slightly lower employment levels were apparent among steam shovel men and bridge and structural iron workers.

There were 900 returns tabulated from unions in the transportation industries. These organizations reported a total membership of 80,921, of whom 1,151, or a percentage of 1·4, were unemployed in comparison with percentages of 1·3 in May and 2·1 in June, 1941. In comparison with the preceding month steam railwaymen whose returns constituted over 78 per cent of the entire group membership, reported a reduction in the unemployment percentage from 1·5 to 1·3. Very little unemployment prevailed among street and electric railway employees or teamsters and chauffeurs, although there were fractional declines in available work. A noteworthy recession occurred among navigation workers. The unemployment percentage increased from 4·5 to 10·4. In comparison with conditions in June, 1941, an appreciable expansion took place among navigation workers, while among steam railwaymen there was a slightly higher employment level; among the latter membership conditions were very good at both dates. Among street and electric railway employees the percentage of unemployment remained at 0·1; while among teamsters and chauffeurs there was a slight contraction in work.

From unions of retail and wholesale employees, 12 returns were tabulated. These embraced a total membership of 3,062 persons. Of these, 2, or a percentage of 0·1 were without work, in comparison with a fully employed situation in both the preceding month and June, 1941.

Returns were received from 98 unions of civic employees, whose combined membership was 9,786 persons, of whom 5, or a percentage of 0·1 were unemployed. This percentage was identical with that shown at the close of May. In June, 1941, the percentage of those without work stood at 1·2.

Reports were tabulated from 146 unions in the miscellaneous group of occupations. There were 11,595 members, of whom 83, or a percentage of 0·7, were without work, in comparison with 1·0 in May and 2·6 in June, a year ago. Among hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen, there were fractional employment increases; in each case the unemployment percentage was low. Unclassified workers did not report any unemployment compared with 0·1 per cent in May. In comparison with the situation in June, 1941, the percentage of unemployment declined substantially among theatre and stage employees, standing at 1·9, compared with 6·5. Employment among hotel and restaurant members and stationary engineers and firemen attained substantially higher levels; these percentages were 0·6 and 0·9 in May, compared with percentages of 2·6 and 3·2 in June, a year ago. Among barbers there was a fractional betterment, the unemployment percentage standing at 0·3; while for unclassified workers there was no unemployment reported, compared with 0·5 per cent, a year ago.

Returns were tabulated from 5 unions of fishermen. The combined membership of these unions was 1,772, of whom 110, or a percentage of 6·2 were unemployed, in comparison with 6·0 per cent in May and 16·9 per cent in June, 1941.

Reports were tabulated from 2 unions of lumber workers and loggers. The total membership was 2,287, of whom 85, or a percentage of 3·7, were without work compared with percentages of 3·9 in May and 3·2 in June, a year ago.

Table I shows by provinces the average percentage of union members who were unemployed each year from 1931 to 1941, inclusive, and also the percentage of unemployment for June of each year from 1931 to 1940, inclusive, and for each month from June, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in Table I.

Building Permits Issued in Canada, June, 1942

The June report of building permits compiled by the Dominion Bureau of Statistics, includes returns from 175 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 162 reported detailed operations. The remaining 13 advised that no permits had been issued during the month of June while 29 municipalities had failed to report at the close of July 12.

The total value of permits reported as issued in the month of June is $9,979,288. Revised values for the month of May include returns

from 201 municipalities and aggregate $9,250,-895. Reports were received from 56 of the 58 original muncipalities and show a value of $7,612,333 for June. The corresponding revised value for May includes 58 returns and is $6,552,773, while the June, 1941, value was $8,534,554.

The total value of permits issued by all municipalities during the six elapsed months of the current year is $48,339,891. The value of the 58 municipalities for the same period is $36,913,313, while their corresponding value in 1941 was $48,461,326.

During the month of June new construction of all types amounted to 72·1 per cent of the total value, while the percentage of new residential construction was 54·4.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, June, 1942, summarizes the April-May employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at May 11, 1942 (exclusive of men numbering 25,628 who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 65,771, showing a decrease of 3,772 as compared with the corresponding total for April 13. Those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 2,599, showing a decrease of 682 as compared with April 13. Those registered as unemployed casual workers numbered 2,951, a decrease of 774 since April 13.

The corresponding figures for women and girls at May 11 were 43,192 wholly unemployed (exclusive of those numbering 1,505 who had been classified by interviewing panels as unsuitable for normal full-time employment), 3,190 temporarily stopped, and 281 unemployed casual workers. Of the 43,192 wholly unemployed 1,896 had been classified as unable for good cause to transfer to another area. As compared with April 13, the numbers wholly unemployed showed a decrease of 4,313, those temporarily stopped showed a decrease of 10, and unemployed casual workers showed an increase of 36.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for May 11 was 77,444, as compared with 79,663 at April 13, and 240,119 at May 12, 1941.

United States

On July 31, Miss Frances Perkins, United States Secretary of Labor, reported that an increase of 152,000 in total nonagricultural employment between mid-May and mid-June had raised the June level of employment to 41,415,000, the highest level on record, and exceeding the previous peak of employment in December, 1941, by 335,000 and the June, 1941, level by 1,940,000.

Under the impetus of the war production, factory employment rose to new high levels in June, the war industries accounting largely for its gain of 100,000 over the month interval. Employment in the Federal, State, and local government service also continued to expand sharply and the transportation and public utility and finance, service, and miscellaneous groups reported further increases in employment.

Offsetting these gains were contraseasonal employment losses in trade, mining, and contract construction. The decline of 85,000 in trade employment was accounted for in part by Government restrictions affecting, directly or indirectly, the sale of many civilian items such as automobiles, tires, electrical appliances, gasoline, lumber, and plumbing and heating equipment. The decrease in construction employment was due to recessions in private construction, employment on government projects having shown a substantial increase. In the mining group, declines in coal and metal mining offset small increases in the quarrying and crude petroleum producing industries.

The increase of nearly 1,000,000 in manufacturing employment since June of last year constituted more than one-half of the gain in nonagricultural employment over this period. All of the other major groups except trade and mining also showed gains over the year interval, the largest being in Federal, State, and local government services (763,000), transportation and public utilities (178,000), and contract construction (157,000). In trade there was a decline of 279,000 due to the impact of the war program and in mining a decline of 25,000 due to reductions in anthracite mining and crude oil production.

Despite declines in many manufacturing industries due to curtailed civilian production, factory wage earner employment as a whole showed a contraseasonal gain of 0·9 per cent (99,000) between May and June and weekly wages an increase of 1·4 per cent ($5,050,000). Typical changes for this time of year are decreases of 0·8 per cent in employment and 0·7 per cent in pay rolls.

The durable-goods group of manufacturing industries reported an increase of 2·0 per cent (119,200) in the number of wage earners and a gain of 2·2 per cent ($5,160,000) in weekly wage disbursements, reflecting continued expansion in factories manufacturing war goods. In contrast, however, the nondurable-goods group showed a small reduction of 0·4 per cent or 20,200 in number of wage earners and 0·1 per cent or $114,000 in weekly wages.

The automobile industry again showed an employment gain (5·2 per cent or 18,100 workers), as plants, converted to the war effort, continued to step up production. Many other industries engaged in war manufactures

continued to show substantial employment gains over the month interval. Among them were shipbuilding, aircraft, foundries, engines, electrical machinery, machine tools, ammunition, steel, explosives, and machine-tool accessories. Industries showing gains of a seasonal nature were canning (26·7 per cent), butter (8·0 per cent), ice cream (7·5 per cent), and cigars and cigarettes (1·6 per cent). The carpet and rug industry showed a gain of 4·5 per cent reflecting conversion of looms and other facilities to production of materials for the government. The increase of 4·0 per cent in the tire industry also reflected increased production on government orders.

Employment declines due chiefly to material shortages and the exercise of priority ratings and freeze orders were reported by such industries as cast-iron pipe, plumbers' supplies, stoves, tin cans and other tinware, radios and phonographs, typewriters and parts, electric and steam railroad cars, jewellery, beverages, confectionery, and paints and varnishes. Substantial reductions in number of workers, due primarily to seasonal factors, were also reported by firms manufacturing women's clothing; cottonseed—oil, cake, and meal; and fertilizers.

The June indexes of factory employment and pay rolls were at new, all time peaks, 138·4 and 194·5 per cent, respectively of the 1923-25 averages. The gains since June of last year were 8·2 per cent in employment and 27·8 per cent in pay rolls. The pay-roll increase was nearly three and a half times as large as the employment gain due mainly to increased working hours, overtime premiums, wage-rate increases, and increased employment in industries in which the wage scale is relatively high.

Wage-rate increases averaging 8·0 per cent and affecting 121,000 factory wage earners were reported by 575 establishments out of a reporting sample of about 30,000 plants and 7,000,000 workers.

Employment in wholesale trade fell off 1·7 per cent, the fifth successive decline since January and the largest June curtailment in 14 years. While substantial increases were reported by wholesale establishments handling food products, general merchandise, and leather and leather goods, most other lines reported declines. Notable among the latter were the automotive, electrical, lumber and building material, and plumbing and heating equipment lines reflecting the effect on sales of government restrictions on the manufacture of civilian goods and the construction of buildings for civilian use, as well as the direct limitation of sales of automobiles, tires, oil burners, and other products. Assemblers and country buyers reported a seasonal employment loss of 10·9 per cent.

Retail trade employment, also affected by government restrictions, showed a contra-seasonal employment decline of 1·6 per cent. This was the largest June percentage decrease of the past 13 years with but one exception, June, 1930, when an equal decline was reported. The reduction since June, 1941, was 5·4 per cent. Notable declines among the individual retail lines were reported by electrical appliance dealers (8·4 per cent), automobile dealers (6·2 per cent), and tire and battery shops (4·4 per cent). Substantial decreases were also reported by department, apparel, and furniture and house furnishings stores as well as by lumber dealers. A few of the less important retail lines reported slight seasonal increases.

Employment in anthracite mining declined seasonally by 4·8 per cent and in bituminous-coal mining, 0·8 per cent. Pay rolls, however, advanced 9·1 and 6·1 per cent, respectively, due in part to vacation pay received by the miners. A substantial decrease in gold and silver mining accounted largely for the slight employment decrease (0·4 per cent) in metal mining as a whole. A comparison with a year ago, however, showed an increase of 3·8 per cent coupled with a pay-roll gain of 19·1 per cent. Employment in quarries and non-metallic mines showed a less-than-seasonal gain of 0·5 per cent over the month and in crude petroleum production virtually no change (0·1 per cent).

Among the service industries, year-round hotels reported a seasonal employment decline of 0·9 per cent, and laundries and dyeing and cleaning establishments, less than seasonal gains of 0·5 and 1·7 per cent, respectively. Insurance firms reported employment at about the same level as in May, a decline of 0·2 per cent, while brokerage firms reported a reduction of 3·0 per cent in number of workers.

Electric light and power companies reported about the same number of workers in June as in the preceding month, while telephone and telegraph personnel increased by 0·8 per cent and street railways and buses expanded their forces by 1·4 per cent. With but two exceptions the latter industry has shown employment gains each month since February, 1941, reflecting the increased demand for public transportation due to the war progress. The gain since June a year ago was 7·0 per cent.

All Federally-financed construction required 1,621,000 workers during the month ending June 15, constituting an increase over May of 50,000 persons. Pay rolls, amounting to $300,623,000 increased by 7 per cent. Construction workers hired directly by the Federal Government numbered 244,000 or 15 per cent of the total.

War construction, not including housing, employed 65,600 additional workers during June, reaching a total of 1,471,000 persons and constituting 91 per cent of the total number employed on Federally-financed construction. Expansion during June took place mainly on the construction of ships, nonresidential buildings, and public roads. Decreases were reported on airport construction due to the completion of several projects.

Employment in the Federal executive service increased by 107,000 persons during the month of June: 13,000 inside the District of Columbia and 94,000 outside. Over the past year employment inside the District has increased 46 per cent and outside the District 62 per cent. During June total employment in the Federal executive service was 2,196,000 and payrolls were $360,174,000.

Contraction of the work-relief programs during June affected a total of 176,000 persons. WPA personnel was cut 88,200 (11 per cent), personnel on the NYA student work program was cut 76,800 while personnel on the out-of-school work program increased 3,000. There was a decrease of 14,000 in the CCC. All work-relief programs have dropped a total of 1,308,000 names from the rolls in the past year.

REPORT OF EMPLOYMENT AND CLAIMS OFFICES FOR THE PERIOD APRIL TO JUNE, 1942

EMPLOYMENT conditions, as indicated by the work of Employment and Claims Offices of the Unemployment Insurance Commission during the quarter April to June, 1942, showed a gain of 6 per cent in vacancies, but a decline of 24 per cent in placements, when compared with those reported by offices of the Employment Service of Canada in the corresponding quarter of 1941. Mining, manufacturing, trade and finance recorded gains in both instances and agriculture, construction, transportation and services a loss under each comparison, while logging reported more vacancies, but fewer placements; the largest declines in placements being registered in services and in construction, which were partly offset by a substantial advance in manufacturing. Provincially, all except Quebec and Saskatchewan, showed increased vacancies, although only Nova Scotia and Prince Edward Island, Manitoba and British Columbia reported more numerous placements, the most marked change shown in the latter case being a reduction recorded in the Province of Quebec.

From the chart on page 942 which accompanies the article on the work of the Employment and Claims Offices for the month of June, it will be seen that the curve of vacancies and of placements showed a pronounced upward trend during April and May, but during June the course followed was decidedly downward, the levels at the close of the quarter being much lower than those recorded at the end of the corresponding period a year ago. This marked change in June was almost entirely due to a substantial increase in the number of applicants registered during the month, as a result of the compulsory registration of males, between the ages of 16 and 69 inclusive, under authority of Order in Council P.C. 1445. During the period April to June, 1942, there was a ratio of 66·9 vacancies and 43·8 placements for each 100 applications for employment, as compared with 71·9 vacancies and 65·9 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 2,153, of applicants registered 3,220, and of placements effected 1,410 in contrast with a daily average of 2,060 vacancies, 2,863 applications and 1,887 placements in regular and casual employment during the same quarter of 1941.

During the three months April to June, 1942, the offices reported that they had referred 117,841 persons to positions and had effected a total of 105,710 placements, of which 78,366 were in regular employment and 27,344 in casual work. Of the placements in regular employment, 61,414 were of men and 16,952 of women. A comparison with the corresponding period of 1941 shows that 139,593 placements were then made, of which 82,555 were in regular employment and 57,038 in casual work. Applications for employment during the period under review were received from 184,894 men and 56,567 women, a total of 241,461, in contrast with the registration of 211,833 during the same period of 1941. Employers notified the Commission during the quarter April to June, 1942, of 161,459 vacancies, of which 109,328 were for men and 52,131 for women, as compared with 152,376 opportunities for work offered during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the Employment and Claims Offices for the month of June, 1942.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

PRIOR to the establishment of Wartime Wage Control under P.C. 8253, inspection and enforcement of fair wages and labour conditions on Government contracts was provided under P.C. 5522 of July 22, 1941 (LABOUR GAZETTE, August, 1941, page 869), which empowered the Minister of Labour "to appoint any provincial official or any other person authorized to inspect labour conditions pursuant to the law of any province as his duly authorized representative for the enforcement of the fair wages and labour conditions on Dominion contracts." It also established a penalty for any person who obstructs such a representative in the pursuit of his duties.

P.C. 1774 of March 9, 1942, replaces the foregoing Order and gives recognition to the jurisdiction of the National War Labour Board which was charged in P.C. 8253 of October 24, 1941, with the administration of the fair wage and labour conditions on Government contracts, as well as the administration of the wages and cost-of-living bonus provisions of that Order. P.C. 1774 also contemplates the extension of the appointment of representatives of the Minister of Labour to include provincial wage commissions, parity committees, or other agencies whose inspection function would usefully serve the National or a Regional War Labour Board with respect to the enforcement of those matters with which such Boards are charged.

Accordingly the National War Labour Board is now furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wage Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Orders in Council of April 9, 1924, and of December 31, 1934. The Fair Wages Order in Council contains certain conditions marked "A" which was applicable to contracts for building construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On May 30, 1941, an Order in Council, P.C. 3884, was passed rescinding the schedule of minimum wage rates set out in the "B" conditions which had been in effect since December, 1934, and establishing increased rates of 35 cents and 25 cents respectively for male and female workers over eighteen years of age. It also made provision for a system of permits to employ beginners and handicapped workers at sub-standard rates, and provided penalties for non-compliance with the prescribed rates.

On October 4, 1941, P.C. 3884 was revoked by the passage of Order in Council P.C. 7679 and minimum rates were prescribed for all employees of Government contractors and subcontractors. (The full text of this Order in Council appears at pages 1226 and 1237 of the LABOUR GAZETTE for October.)

The four major changes made by the new Order are: (1) the application of the minimum rate of *all* employees of contractors and subcontractors throughout an establishment of which any part may be engaged on Government orders, and not only as previously to those employees actually engaged in Government work; (2) the addition of a new minimum wage rate of 20 cents an hour for employees under 18 years of age whose rates previously had been set by provincial regulation, (3) the authorization of special beginners' rates; and (4) the exemption from the necessity of obtaining beginners' permits unless the number of beginners exceeds a quota of 20 per cent of the total number of employees in any establishment.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were suspended in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. This clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance, or

guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreements with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wage rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in a sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working

week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

Schedules Prepared and Contracts Awarded During July

During the month of July the National War Labour Board prepared, on request, 180 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into recently by the various Government departments (other than the Department of Munitions and Supply) appear in the following table.

Department	Description of Contract	Location	Name of Contractor	Date of Contract	Amount of Contract	Labour Conditions
Transport.....	Construction of a Water Supply.	North Junction, Manitoba.	Marion and Co.Ltd., St. Boniface.	June 30, 1942	$ 9,979 40	"A1"—Wage Schedule.
Transport.....	Construction of Waterworks Pumphouse.	Welland, Ont....	Scott-Jackson Construction Ltd., Toronto, Ont.	July 3, 1942	13,605 00	"A1"—Wage Schedule.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Animal Foods

MOOSE JAW, SASK.—SWIFT CANADIAN CO. LTD. AND UNITED PACKING HOUSE WORKERS OF AMERICA, LOCAL 177.

Agreement reached through mediation of the chief executive officer of the Regional War Labour Board. Agreement to be in effect from July 13, 1942, to July 12, 1943, and thereafter from year to year, subject to notice.

The Company recognizes the union as the exclusive bargaining agency for all hourly paid and piecework employees. Hours: 8 per day, 48 per week are basic hours, but may be increased when necessary to 10 per day, 50 per week. All work over 10 hours in a day or 50 in a week to be paid at time and one-half; also all work on Sundays and eight specified holidays. Minimum hourly wage rate for regular male hourly labour is 45 cents, for regular female employees, 36 cents; piecework rates to remain as in effect at date the agreement made. Cost of living adjustments or bonuses to be made and paid from time to time as fixed by Dominion Government Act, ruling or regulations. One week's vacation with pay annually after one year's service, two weeks after two years' service and three weeks after 15 years' service in the case of female employees, after 20 years' service in the case of male employees. Provision is made for seniority rights and for the settlement of disputes.

Manufacturing: Pulp, Paper and Paper Products

PORT MELLON, B.C.—SORG PULP COMPANY LTD. AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL 297.

Agreement reached following an Industrial Disputes Investigation Board and further conciliation, as noted on page 886 of this issue. Agreement to be in effect from July 15, 1942, to July 15, 1943, and thereafter from year to year, subject to notice. The Company recognizes the union. Hours: 48 per week, but additional time may be worked to permit operation or protection of the mill. Time and one-half for all work over 8 hours in any day or over 48 in any week, and for all work on employee's weekly day off and on specified holidays. The wage schedule forming part of this agreement was not received in the department. A cost-of-living bonus is provided for

in accordance with the federal government 1941 Order in Council 8253 or when mutually agreed to and approved by the Regional War Labour Board. Provision is also made for adjustment of complaints and the return to their jobs of permanent employees as at July 1, 1942, after honourable discharge from His Majesty's forces.

Manufacturing: Metal Products

MONTREAL, P.Q.—CANADIAN VICKERS LTD. AND CERTAIN CLASSES OF EMPLOYEES REPRESENTED BY THE UNITED STEEL WORKRS OF AMERICA, LOCAL 2524.

Agreement reached through an Industrial Disputes Inquiry Commissioner and further conciliation, as noted on page 885 of this issue. Agreement in effect from July 9, 1942, to July 8, 1943, and thereafter from year to year, subject to notice. No discrimination in the employment, retention or conditions of employment of a man because of his labour affiliations. Hours: 8¾ per day, 4½ on Saturday, a 47-hour week for day work; 9 per day, 5 nights, a 45-hour week for night work; for three shifts, shifts to be 8 hours, with a 20-minute lunch period. Overtime is payable at time and one half; double time for work on Sundays and on seven specified holidays. Men working on regular night shift to be paid time and one-eighth when approved by the National War Labour Board; until then the present regulation of 5 cents per hour extra on the night shift to be continued. Men "working spasmodically" on the night shift of 9 hours, repairing ships on the dock, will be paid at time and one-quarter. Dirty work to be paid for at 10 cents per hour extra. For all repair work on ships a bonus of 5 cents per hour to be paid. One apprentice allowed to each five journeymen; they are to serve four years. Provision is made for seniority rights, the re-employment of employees enlisted or called into military service and for the settlement of disputes.

Minimum hourly wage rates for some classes in the Marine Department: platers 80 cents, erectors 60 cents, straightener 80 cents, driller 75 cents, bolter-up, reamers and packers 60 cents, blacksmiths and electric welder, 80 cents, acetylene welder 73 cents, loftsmen 85 cents, shipwrights 80 cents, painters 75 cents, red leaders 50 cents, engineers 80 cents, machinists (marine) 80 cents, punch and shear operator 65 cents, improver or learner 50 cents and up, general helper 50 cents, labourers 45 cents, apprentices from 35 cents to start to 70 cents during seventh six months.

Minimum hourly wage rates for some classes in the auxiliary services: locomotive crane driver 70 cents, slinger 53 cents, gasoline engine driver 64 cents, truck drivers and tractor drivers 50 cents, general helpers 50 cents, labourers 40 to 45 cents, storekeepers 60 and 70 cents, helpers 45 cents, millwright 83 cents, plumbers and machinst (maintenance) 82 cents; gas house attendants 57 cents, compressor house attendants 64 cents, steam plant shift engineer 78 cents, fireman 57 cents, patrolling pipe lines 52 cents.

Minimum hourly wage rates in machine shop: machinists 80 cents, toolmakers 90 cents, layoff men (machinists skilled in reading of drawings, etc.) 80 cents, fitters 80 cents, machine operators 50 and 60 cents, trainees 30 and 40 cents, overhead cranemen 55 and 58 cents, overhead slingers 50 and 58 cents, millwrights 78 cents, oilers 45 cents, labourers 40 cents, apprentices 30 to 70 cents.

VANCOUVER, B.C.—DOMINION BRIDGE CO. LTD., OPERATORS OF BURNABY ORDNANCE PLANT, AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2655.

Agreement reached through an Industrial Disputes Inquiry Commissioner, as noted on page 884 of this issue. Agreement in effect from July 8, 1942, for the duration of the war.

The Company recognizes the union as the sole collective bargaining agency for employees on an hourly basis, in this plant. All employees now members of the above union to remain members for the duration of this agreement, as a condition of employment; all other employees shall be free to join any union or to remain unaffiliated. Hours: 8 per day, 44 per week; on second shift, 7½ hours' work with 8 hours' pay. Overtime to be paid at time and one-half for first four hours and double time thereafter; double time for work on Sundays and seven specified holidays or as decreed by the Federal Government for all war industries in B.C. Provision is made for seniority rights and for a committee to deal with grievances.

Minimum hourly wage rates: toolmakers $1.05, toolmakers' improvers 90 cents (for 6 months), set-up men or lead hands 95 cents, machinists and fitters (journeymen) 90 cents, leading inspectors $1, carpenters and electricians (maintenance) 90 cents, experienced helpers 65 cents, labourers 55 cents; machine and fitter operators, inspectors, production chasers, layout men, straighteners, heat treat operators (including polishing and browning), sandblasters, tool crib clerks, storekeeper helpers 50 cents for four weeks, 65 cents for 20 weeks, then 80 cents, an increase from 80 to 90 cents on merit and ability to be mutually agreed between management and committee; leading production chasers, straighteners, heat treat operators, tool crib clerks and storekeepers 90 cents; charge hand 10 cents per hour over basic rates. The present cost-of-living bonus to remain in effect with further bonuses in accordance with the federal government 1941 Order in Council 8253 and amendments. Female workers to be paid from 40 cents during first six weeks to 55 cents during fourth six weeks, thereafter 60 cents, increases 60 to 80 cents on merit and ability as mutually agreed between management and committee.

Transportation and Public Utilities: Local Transportation

WINNIPEG, MANITOBA.—CITY DRAY CO. LTD. AND THEIR EMPLOYEES.

Agreement reached through conciliation by an Industrial Disputes Investigation Commissioner, as noted on page 884 of this issue. Agreement to be in effect from January 1, 1942, to December 31, 1943, and thereafter subject to 30 days' notice.

No discrimination against employees because of membership in the Canadian Brotherhood of Railway Employees and other Transport Workers. Hours: 48 per week. Overtime is payable at 50 cents per hour; employees required to stand by subject to call (other than during regular working hours) to be paid 25 cents per hour. Weekly wage rates: for chauffeurs—cartage drivers $20 during first twelve months' service, $21 during second twelve months and $22.50 thereafter; for contract drivers $20 during first twelve months' service and $21 thereafter; other employees as arranged by mutual agreement. Provision is made for seniority rights, one week's vacation with pay, and for the settlement of grievances.

Winnipeg, Manitoba.—Manitoba Cartage and Warehousing Co. Ltd. and its Employees, Members of Canadian Brotherhood of Railway Employees, Division 253.

The agreement which was summarized in the Labour Gazette, February, 1942, page 232, was amended March 18, 1942, to provide for one week's vacation with pay. Effective January 1, 1942, the cost-of-living bonus is to be $8.50 per month, unless disallowed by Order in Council 8253, in which case it will be paid as provided by such and subsequent Orders in Council. Should the cost-of-living rise over the January 1, 1942 level, quarterly joint meetings will be held to discuss increasing the cost-of-living bonus.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the Labour Gazette, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of emloyees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the amendment of ten agreements, as noted below. Requests for the extension of new agreements for longshoremen, shipliners and checkers (all engaged in connection with ocean going vessels) at Montreal and longshoremen at Quebec (ocean navigation) were published in the *Quebec Official Gazette*, July 25. Requests for amendment of the agreement for the paint industry throughout the province and for the amendment of the agreements for barbers and for hairdressers at Three Rivers, were published in the *Quebec Official Gazette*, July 18. The request for the extension of a new agreement for building trades at Sherbrooke, which was mentioned in the July issue of the Labour Gazette, was corrected in the *Quebec Official Gazette*, July 4.

In addition, Orders in Council were published in the *Quebec Official Gazette*, during July, approving or amending the constitution and by-laws of certain parity committees, and others approving the levying of assessments or amending previous Orders in Council in this connection, by certain other parity committees.

Manufacturing: Fur and Leather Products

FUR MANUFACTURING INDUSTRY (WHOLESALE), MONTREAL.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 4, extends to July 31, 1942, the terms of this agreement (LABOUR GAZETTE, September, 1940, page 970, and May, 1942, page 630).

Manufacturing: Textiles and Clothing

WOMEN'S CLOAK AND SUIT INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 4, extends the terms of this agreement (LABOUR GAZETTE, *October*, 1937, page 1157; May, 1940, page 496, August, page 866, November, page 1202; and October, 1941, page 1314) to June 30, 1943.

Construction: Buildings and Structures

ELEVATOR CONSTRUCTION, PROVINCE OF QUEBEC.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 4, extends the term of this agreement (LABOUR GAZETTE, September, 1941, page 1159, December, page 1573, and June, 1942, page 738) to August 31, 1942.

BUILDING TRADES, MONTREAL

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 4, extends the term of this agreement (LABOUR GAZETTE, September, 1941, page 1160, and December, page 1573) to August 31, 1942.

Transportation and Public Utilities: Water Transportation

LONGSHOREMEN (INLAND AND COASTAL NAVIGATION), MONTREAL.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 4, extends the term of this agreement (LABOUR GAZETTE, July, page 856 and previous issues as noted therein) to July 31, 1942.

Trade

RETAIL STORES, BAKERS, HOTELS, ETC. MAGOG.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 11, amends the previous Orders in Council (LABOUR GAZETTE, November, 1940, page 1203, and March, 1941, page 335.) The agreement is extended to October 12, 1942, and thereafter from year to year, subject to notice. A cost-of-living bonus is provided for under the same conditions as described in federal government 1941 Order in Council 8253. Certain changes were made in closing times.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, QUEBEC.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 11, amends the previous Orders in Council (LABOUR GAZETTE, August, 1941, page 1013, and May, 1942, page 631) by a slight change in hours in one zone.

BARBERS AND HAIRDRESSERS, CHICOUTIMI AND LAKE ST. JOHN DISTRICT.

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 11, amends the previous Order in Council for these trades (LABOUR GAZETTE, November, 1941, page 1425) by providing for a cost-of-living bonus in accordance with the Federal government 1941 Orders in Council P.C. 8253 and 9514.

BARBERS AND HAIRDRESSERS, HULL

An Order in Council, dated July 2, and published in the *Quebec Official Gazette*, July 4, amends the previous Order in Council (LABOUR GAZETTE, October, 1941, page 1316, and December, page 1573). Hours and wages are specified for female hairdressers (in the city of Hull only): Hours are 54 per week; overtime at 36 cents per hour. One week's vacation with pay after two years' service. Minimum wages for female hairdressers (journeywomen) $13 per week. Apprentices to serve 3 years are to be paid from $2 per week during second three months to $10 during second half of third year.

Employment of Children in Agriculture in Great Britain

An Order in Council made by His Majesty on 30th April, 1942, provides for the addition to the Defence (Agriculture and Fisheries) Regulations, 1939, of further Regulations whereby, subject to specified conditions and limitations, exemption from the obligation to attend school may be granted by local education authorities to children aged 12 years and over for the purpose of enabling them to be employed in agricultural work of a seasonal nature which, by reason of a shortage of labour, would be seriously delayed but for the employment of the children.

The Regulations, as summarized by the British *Ministry of Labour Gazette*, stipulate, *inter alia*, that the exemption of a child from school attendance shall be conditional upon the consent of the father or mother of the child or of the person having the actual custody of the child, and, if exemption has already in the same year been granted to the child in respect of twenty or more school meetings, upon the approval of one of His Majesty's inspectors. Moreover, no child may be employed in agricultural work, or in agricultural work and other work, for more than thirty-six hours in any week or seven hours in any day, or for more than four hours without a continuous interval of at least one hour.

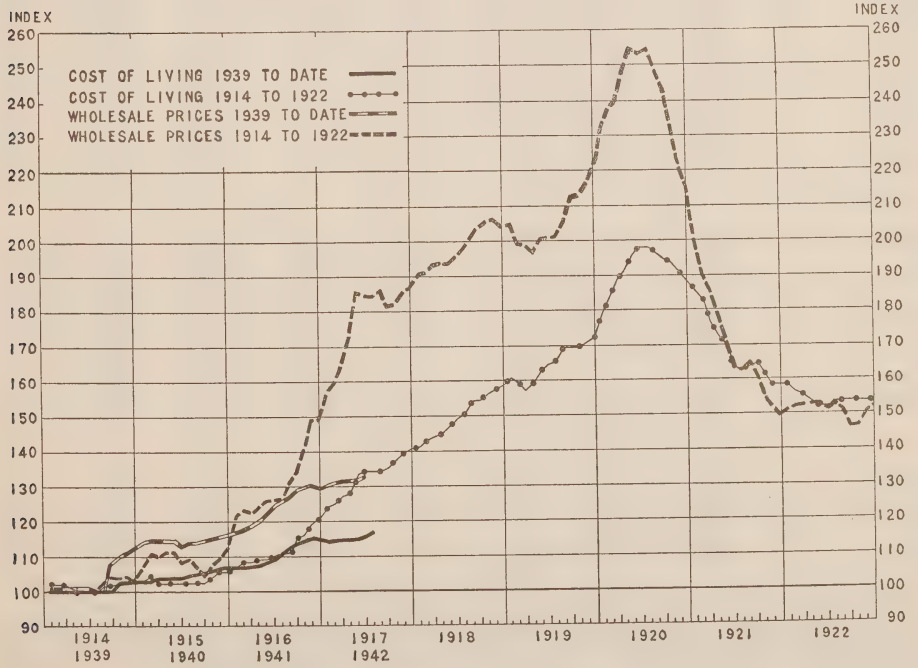
PRICES, RETAIL AND WHOLESALE IN CANADA, JULY, 1942

Cost of Living, Prices of Staple Articles and Index Numbers

THE official index number of the cost of living in Canada calculated by the Dominion Bureau of Statistics on the base period 1935 to 1939 as 100 advanced from 116·7 at the beginning of July to 117·9 at the beginning of August. The advance was due mainly to increases in the food group chiefly to increases in the prices of potatoes, beef, lamb and eggs. The prices of butter, cheese and lard were slightly lower. A fractional advance was recorded for the index of the clothing group while the fuel and lighting group was slightly lower and the rent, home furnishings and services, and the miscellaneous groups were unchanged. Comparative figures for the official index at certain dates are 117·9 for July; 116·7 for June; 111·9 for July, 1941; 105·6 for July, 1940; and 100·8 for August, 1939, the last pre-war month. The increase between August, 1939, and July, 1942, was 17 per cent as compared with an increase of 34·3 per cent between July, 1914, and June, 1917, the equal period during the last war.

After adjustment to the base 100·0 for August, 1939, as required by Order in Council P.C. 5963 of July 10, 1942, replacing P.C. 8253 of October, 1941, the index was 117·0 for July 2; 115·8 for June 1; 115·0 for April 1; 114·5 for January 2; and 114·6 for October 1, 1941.

In compliance with the Order in Council P.C. 6219, the price of cigarettes and tobacco in the July index does not include the tax imposed on June 24, 1942, under the Special War Revenue Act.



On page 904 of this issue reference is made to a statement by the National War Labour Board as to the adjustment in the cost of living bonus for the three-month period August 15 to November 15.

Foods advanced 31·2 per cent between August, 1939, and July, 1942; clothing 19·9 per cent; home furnishings and services, 16·8 per cent; fuel and light 13·6 per cent; rent 7·2 per cent; and the miscellaneous group 5·7 per cent.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to Decem-

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

ber 1. The text of P.C. 8527 which appeared in the *Labour Gazette,* for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the *Labour Gazette* the activities of the Board in the operation of the price control policy are summarized. Prices of fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers. Onions were placed under a price ceiling in January the basic period being the week ended January 10, and potatoes in March with the basic period February 2-7. Effective May 18, 1942, maximum retail prices for bananas were specified under an order of the Board.

The index number of the cost-of-living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners

AVERAGE RETAIL PRICES, IN SIXTY-NINE CITIES IN CANADA, FOR CERTAIN STAPLE FOODS AND FUEL AT CERTAIN DATES 1914 TO 1942

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—Monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing, (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 105·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6; May, 120·9; June, 121·8; July, 123·9.

The accompanying chart shows the trend of the cost-of-living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The index number of wholesale prices calculated by the Dominion Bureau of Statistics and based upon average prices during 1926 as 100 was 96·1 for July as compared with 95·8 for June; 93·8 for October, 1941; 91·1 for July, 1941; 82·6 for July, 1940; and 72·3 for August, 1939. Most of the increase during

the month was recorded in the vegetable products group the index of which advanced about two per cent while animal products group declined slightly more than one per cent. Other group changes in the chief component materials classification were of minor character. The increase in the general index between August, 1939, and July, 1942, was 32·9 per cent. Canadian farm products advanced 38·8 per cent in this same period, consumers' goods 32·9 per cent and producers' goods 31·9 per cent. The increase in the general index between July, 1914, and June, 1917, was 84·3 per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of July of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the *Labour Gazette*. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the *Labour Gazette*.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (Labour Gazette, December, 1941, page 1462), the price ceiling established by P.C. 8527 (Labour Gazette, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (Labour Gazette, October 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 748. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the acommodation.

Retail Prices

Retail prices of beef and lamb again averaged considerably higher and smaller increases were recorded for other meats also. Under an order of the Wartime Prices and Trade Board in May provision was made for seasonal adjustments in the wholesale and retail ceiling prices of beef replacing the maximum prices established during the basic period in the autumn of 1941 when grass-fed cattle were being marketed. Provision was made under the order for reducing the maximum prices commencing in July. Sirloin steak advanced in the average from 36·8 cents per pound at the beginning of June to 39·6 at July 1. The price in May was 34·7 cents per pound and in July, 1939, 28·3 cents. The average price of lamb was 39·3 cents per pound at July 1, 34·5 cents at June 1, and 33·2 cents at the beginning of May. Fresh loin of pork advanced from an average of 33·6 cents per pound in June to 34 cents in July. Bacon was again fractionally higher.

The price of fresh eggs averaged 37·4 cents per dozen at the beginning of July as compared with 35·4 cents at the beginning of June and 31·5 cents for July, 1941. Supplies of fresh eggs were reported to be declining while demand was firm possibly due to the higher prices for meats. Storage stocks at July 1, were reported to be about the same as at June 1 but were more than 60 per cent greater than at July 1, 1941. Creamery butter at 39 cents per pound was slightly lower than for the preceding month as compared with 35·9 cents for July, 1941. Production for the first six months of the year was about 6 per cent lower than for the corresponding period in 1941. Cheese prices again averaged lower

at 34·8 cents per pound as compared with 35·3 cents at June 1, 35·9 cents at May 1, and 36·5 cents at April 1. Production of cheese for the first half of 1942 was 65 per cent greater than for the similar period in 1941. A substantial seasonal increase in the price of potatoes was recorded with the marketing of the new crop. The price for 15 pounds averaged 60·5 cents at July 1, as compared with 29·5 cents at the beginning of July, 1941. Bananas at 15·2 cents per pound were 1 cent per pound higher than for the previous month. The price at the beginning of the year was 11·1 cents per pound.

The following are the prices reported for Welsh coal, "cobbles" and "French nut" at the beginning of July, 1942, Halifax $18.50; Charlottetown $17.90; Saint John $18.50; Quebec $16.50; Three Rivers $17.25; Sherbrooke $18.75; St. Hyacinthe $17.50; Montreal $17.75; Kingston $18.50; Belleville $18.50; Oshawa $18; St. Catharines $18. It is understood that for cities west of Montreal the prices are for the balance of stocks on hand.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost-of-living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the July issue of the LABOUR GAZETTE. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 159·8 for June, a decrease of 0·6 per cent for the month, and the first decrease since the outbreak of war. Food prices were 1·3 per cent lower than the May level due chiefly to a 4 per cent fall in cereals prices. Industrial materials were 0·1 per cent lower, with no important change.

The *Statist* index number, on the base 1867-1877=100, was 156·6 at the end of May, an increase of 1·4 per cent for the month. Foodstuffs were 0·7 per cent higher and industrial materials 1·7 per cent chiefly due to higher prices for changed import prices of hides, leather and timber.

COST-OF-LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 199 at June 1, a decline of half of one per cent for the month. This was due entirely to lower food prices (also half of one per cent). The price of milk at June 1 was lower than at May 1, in many areas.

Newfoundland

COST-OF-LIVING.—The index number of the Department of Health and Welfare, on the base October 1, 1938=100, was 141·0 at July 4, an increase of 3·1 per cent for the month, due to substantial increases in food and in fuel and light prices.

United States

WHOLESALE PRICES.—The Bureau of Labor Statistics index number, on the base 1926=100, was 98·6 for June, a decrease of 0·2 per cent for the month. Of the ten main groups, two showed advances, four declines, and four were unchanged, but in all cases the change amounted to less than one per cent.

COST-OF-LIVING.—The Bureau of Labor Statistics index number, on the base 1935-1939=100, was 116·4 at June 15, an increase of 0·3 per cent for the month. An increase of 1·3 per cent in food prices was partly counteracted by slight declines in clothing and rent.

The index number of the Department of Labor and Industries, Massachusetts, of the cost-of-living in Massachusetts, on the base 1935-1939=100, was 116·5 for July, which is about 1¼ per cent over the June level. Food prices rose 1·8 per cent due to higher prices for beef, lamb, fish, eggs, butter and potatoes. The fuel and light group was 12·25 per cent higher due to an increase of two cents a gallon for range and fuel oils.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1942

DURING the second quarter of 1942 there were 322 fatal industrial accidents, including deaths from industrial diseases reported by workmen's compensation boards, etc., as compared with 308 fatal accidents in the second quarter of 1941. Of the 322 fatalities in the period under review, 109 occurred in April, 110 in May and 103 in June. Fatal accidents during each year are recorded by quarterly periods in the issues of the Labour Gazette for May, August and November of that year, and in February of the following year.

The supplementary lists of accidents not reported in time for inclusion in the reports covering the periods in which they occurred, contain 19 fatalities for the first quarter of 1942, and 6 fatalities for 1941.

In this series of reports it is customary to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Information concerning accidents was received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners of Canada, certain other official sources, as well as from the correspondents of the Labour Gazette, and newspaper reports.

Classified by groups of industries, the fatalities occurring during the second quarter of 1942 were as follows:—Agriculture, 27; Logging, 37; Fishing and Trapping, 5; Mining, Non-ferrous Smelting and Quarrying, 54; Manufacturing, 55; Construction, 50; Electric Light and Power, 4; Transportation and Public Utilities, 61; Trade, 13; Service, 16.

Of the mining accidents, 37 were in "metalliferous mining", 14 in "coal mining", one in "non-metallic mineral mining and quarrying, n.e.s.", and two in "structural materials".

Of the accidents in manufacturing, three were in "vegetable foods, drink and tobacco", three in "animal foods", one in "textiles and clothing", two in "leather, fur and products", nine in "saw and planing mill products", one in "wood products", three in "pulp, paper and paper products", 23 in "iron, steel and products", one in "non-ferrous metal products", one in "non-metallic mineral products", and eight in "chemical and allied products".

In construction there were 25 fatalities in "buildings and structures", one in "railway", eight in "shipbuilding", seven in "highway and bridge", and nine in "miscellaneous".

In transportation and public utilities there were 25 fatalities in "steam railways", one in "street and electric railways", 21 in "water transportation", one in "air transportation", eight in "local and highway transportation", one in "storage", three in "telegraphs and telephones", and one in "express".

There were six fatalities in "wholesale", and seven in "retail" trade.

Of the fatalities in service, nine were in "public administration", two in "custom and repair", three in "personal, domestic and business", and two in "professional".

There was no serious disaster resulting in the loss of a large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows: On April 22, six workmen lost their lives following an explosion in a mixing room of a chemical plant for manufacturing pyrotechnic stores, near Waterloo, Quebec.

On May 6, a labourer and a farmer engaged in logging were drowned from a launch in Lac St. Jean, Quebec. Two log drivers were drowned when a boat capsized near Quyon, Quebec, on May 29. Another two loggers fell into a river and were drowned when a jetty broke while floating logs, near Comeau, Quebec, on June 20.

Two fishermen were drowned while hauling lobster traps, off Dominion, N.S., on May 24.

Two miners were killed by a fall of rock, on May 4, near Timmins, Ontario. Another two miners lost their lives when trapped in a rock burst, at Kirkland Lake, Ontario, on May 30. Three miners died when buried in a cave-in following a premature dynamite blast in a chromite mine, near Richmond, Quebec, on June 12. A cave-in at Coal Creek, B.C., on April 9, resulted in the deaths of two coal miners.

Two iron plant workers died from burns in an explosion in a grinding shed, at Beauharnois, Quebec, on May 15. Two munitions plant workers were killed in an explosion in a detonator proof plant, at St. Paul L'Ermite, Quebec, on June 29.

A carpentry foreman and two labourers lost their lives when buried in an excavation under a cave-in of clay, at Sarnia, Ontario, on April 3.

A tractor operator and a helper were killed when crushed under a tractor when it went over an embankment, near Peace River, Alberta, on April 3. Another tractor operator and a machine operator lost their lives when

crushed under a tractor when it skidded, at Edmonton, Alberta, on April 7.

Two train crew members were killed in a collision of two freight trains, near Monk, Quebec, on April 3. A bridge engineer and a fireman lost their lives following a train collision, near Avola, B.C., on May 28.

Two labourers died when overcome by poisonous gas fumes while working in a sanitary pumping station, at Winnipeg, Man., on April 24.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first quarter of 1942 has been compiled which contains 19 fatalities of which three were in logging, one in fishing and trapping, one in mining, non-ferrous smelting and quarrying, seven in manufacturing, three in construction, two in transportation and public utilities and two in service. Three of these accidents occurred in January, three in February and 13 in March.

A further supplementary list of accidents occurring in 1941 has been made. This includes six fatalities of which two were in mining, non-ferrous smelting and quarrying, three in manufacturing, and one in transportation and public utilities. One of these accidents occurred in February, one in April, two in October and two in December.

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

Minister—Hon. HUMPHREY MITCHELL

Deputy Minister—BRYCE M. STEWART Associate Deputy Minister—A. MACNAMARA

VOLUME XLII] SEPTEMBER, 1942 [NUMBER 9

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of July showed a further upward movement, according to data tabulated by the Dominion Bureau of Statistics from 13,100 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 1,759,065 workers, or 40,183 more than they had employed at June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 175·7, compared with 171·7 in the preceding month, and 157·4 at July 1 of last summer, when a larger advance had been made. The latest index is the maximum in this record of more than twenty-one years.

On the whole, the advance at July 1, 1942, exceeded the average gain between June 1 and July 1 in the experience of preceding years of the record; accordingly, the seasonally-adjusted index also rose, standing at 172·4, compared with 171·7 at June 1.

At July 1 in recent years, the crude indexes (1926=100) have been as follows: 1942, 175·7; 1941, 157·4; 1940, 124·7; 1939, 115·8; 1938, 113·5; 1937, 119·1 and 1936, 104·6.

Accompanying the increase in the number of persons in recorded employment was a further gain in the reported weekly payrolls. These totalled $50,224,523 at July 1, as compared with weekly salaries and wages of $48,477,375 paid on or about June 1 by the same establishments. The per capita average earnings of the 1,759,065 employees reported in the eight leading industrial groups at July 1 were $28.55; in the last report, the average was $28.20 (revised). A comparison of the trends of employment and payrolls in the last twelve months shows an increase of 11·6 per cent in the index of employment, and a gain of 25·1 per cent in recorded weekly payrolls at July 1, 1942, as compared with July 1, 1941.

Unemployment in Trade Unions.—At the beginning of August, 1942, the percentage of unemployment among trade union members stood at 1·8 in contrast with percentages of 2·5 in July and 3·5 at the beginning of August, 1941. The percentage for August was based on returns compiled from 2,225 local labour organizations with a combined membership of 372,985 persons.

Report of the Employment and Claims Offices.—Reports received by the Unemployment Insurance Commission from Employment and Claims offices during the month of July, 1942, showed favourable gains in business transacted, when compared with that of the preceding month and also that of the corresponding period a year ago, this computation being based on the average number of placements recorded daily. Manufacturing and construction were mainly responsible for the increase registered under the first comparison and manufacturing under the second, all industrial divisions showing increased placements over the previous month, but services, agriculture, logging and transportation recording losses from July last year, which partly off-set the gains reported in other groups. Vacancies in July, 1942, numbered 92,719, applications 111,269 and placements in regular and casual employment 54,049.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon average prices in the period 1935 to 1939 as 100 was 117·7 at the beginning of August as compared with 117·9 at the beginning of July; 113·7 for August, 1941; 105·9 for August, 1940; and 100·8 for August, 1939. The slight decline at the beginning of August, 1942, was due mainly to lower prices for beef and potatoes. The index was 16·8 per cent higher at August 1 than for August, 1939, the last pre-war month, as compared with an increase of 34·3 per cent between July, 1914, and July, 1917, the equal period during the last war.

61313—1½

In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 95·6 for August as compared with 96·1 for July; 91·8 for August, 1941; 82·7 for August, 1940; and 72·3 for August, 1939. The increase between August, 1939, and July, 1942, was 32·2 per cent and between August, 1939, and July, 1917, was 84·2 per cent.

Since the introduction of price control last autumn, the cost of living has risen only about one-eighth as much as during the comparable period of the last war, the index at the beginning of August being only 2·2 points higher than at October 1, 1941, the approximate basic date for price control, while during the corresponding period of the last war the index rose 18·2 points. The slight increase in the cost of living since the introduction of price control was due mainly to advances in the food group, in fact more than three-quarters of the increase was due to advances in the prices of three farm products, namely, beef, potatoes and

lamb. The prices of each of these have declined recently and further declines are expected to occur. The difference in the movement of the index of wholesale prices during the two periods is even more marked than that of the cost of living. Between October, 1941, and August, 1942, the index rose from 93·8 to 95·6 or only about one-sixteenth of the percentage increase between October, 1916, and August, 1917, when the index rose from 90·4 to 119·7.

Business Statistics.—The latest statistics available reflecting industrial conditions in Canada are given in the table on page 994. The index of the physical volume of business which reflects activity in mining, manufacturing, construction and the output of electric power as well as in the distribution of goods was slightly higher in July than in the preceding month and slightly lower than for July, 1941. The average for the first seven months of 1942 was about four per cent above that for the similar period in 1941. Of the principal groups represented in the index mineral production and manufacturing recorded advance in July as compared with the previous month but both were lower than in July, 1941. Construction showed marked decline in both comparisons. The output of electric power while slightly lower than in the preceding month was about 12 per cent higher than in July, 1941, and about 30 per cent greater than for August, 1939.

The index of employment for July was at the highest point recorded and was 11·6 per cent higher than at the same date last year and about 50 per cent higher than at the outbreak of war. In addition to these increases, about half a million now have been enrolled in the various armed services. The movement of workers into manufacturing continued, the increase for this group being 81·7 per cent since the outbreak of war.

Cumulative figures for the first seven months of 1942 as compared with the similar period of 1941 show coal production to be 14 per cent greater, cheese production 50·8 per cent greater, pig iron 57·5 per cent, steel 35·1 per cent and footwear production 6·3 per cent greater. Grain marketings declined 23·5 per cent in the same comparison, live stock marketings 2 per cent, flour production 2·9 per cent, creamery butter production 3·7 per cent, and contracts awarded 32·5 per cent. Retail sales averaged about 17 per cent greater for the first six months of 1942 than for the similar period in 1941.

Strikes and Lockouts.—The number of strikes and lockouts recorded for August, 1942, was 59, involving 21,795 workers and causing time loss of 53,535 man working days, as compared with 73 disputes for July, affecting 22,672 workers with time loss of 54,402 days. While the number of strikes was lower, the number of workers and the time loss showed only minor decreases as there were several disputes involving comparatively large numbers of workers with a corresponding time loss. These were coal miners at Blairmore, Coleman and Bellevue, Alta., coal miners at Nanaimo, B.C., shoe factory workers in both Montreal and Quebec, P.Q., steel mill workers at Longue Point, P.Q., and shipyard workers at Sorel, P.Q. During August, 1941, there were 35 strikes, involving 13,314 workers with a time loss of 33,569 days.

Of the 59 disputes during August of this year 52 were terminated during the month. Five resulted in favour of the workers, six were compromise settlements, 11 were in favour of the employer and 30 were indefinite in result. Seven disputes, involving 394 workers, were unterminated at the end of the month. The majority of these were terminated shortly after the first of September with little time loss.

Industrial Disputes Investigation Act

Fifteen applications for the establishment of Boards of Conciliation and Investigation were received during the month of August. Three boards were established, one board was reconvened and the constitution of a board established in July was completed. One application, which did not meet the requirements of the statute, was rejected. Fifteen disputes were referred to Industrial Disputes Inquiry Commissioners for investigation and nine reports were received from Commissioners. Four disputes were recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 1003.

Decisions of National War Labour Board

Of the 278 cases in which Findings and Directions have been delivered by the National War Labour Board to August 28, 1942, 142 had to do with wage increases, 32 with cost-of-living bonuses and 104 were miscellaneous. Of the wage cases 133 were granted in full or in part and 9 were refused. Of the cost-of-living bonus cases, 31 were granted and 1 was refused. Of the miscellaneous cases, 91 were granted and 13 were refused.

"Equal pay for equal work"

In view of the shortage of man-power in the present emergency, it has come to the attention of the National War Labour Board that some employers desire to utilize the services of women, youths and less capable men to do work formerly done by experienced men.

Accordingly, the National War Labour Board has issued a memorandum for the guidance of Regional Boards which indicates the manner in which such less experienced help could be engaged without disturbing the employer's wage structure within the provisions of the Wartime Wages Control Order.

It is provided that occupational classifications for beginners and learners (regardless of sex and their wage rates) may be authorized by a Regional War Labour Board to enable the employer to give training to women, youths and less experienced men to fit them for more skilled work and for up-grading as skill is acquired.

The result will be that women and junior employees who are doing skilled work will be entitled to rates of pay comparable with the pay of skilled employees receiving the higher wage rates.

The employers' scale of basic wage rates for experienced help remains unchanged.

In effect, the application of this memorandum recognizes the practical application of the principle of equal pay for equal work.

The National War Labour Board has in course of preparation its Bulletin No. 3, dealing with matters of interpretation concerning P.C. 5963 in which this question is further detailed.

Labour Day message of Minister of Labour

Marking Labour Day, 1942, the Hon. Humphrey Mitchell, Minister of Labour, issued the following statement:

"I take particular pleasure in extending this greeting on Labour Day, 1942.

"The term 'Labour' to me means a great body of men and women forming a brotherhood of common interest, eager to attain the goal of a better life. That indeed is true in times of peace, and it is more true in this time of world-embracing war. For in Canada as in the Motherland, in the United States, and throughout our Commonwealth, there is no more inspiring example than the unity of the working people in the contribution they are making towards the ultimate victory.

"Our men, drawn from factory and field, are serving in the armed forces to-day, gladly shouldering the dangerous tasks which may mean the supreme sacrifice. Here at home a tremendously expanded army of workers crowd the munitions plants, the shipyards, and the farms doing the all-essential job of producing the means of fighting the war.

"It has been a source of happiness to me to watch how the workers have met the greatest test that has come to our country. Linked to the genius of the inventor and management, labour has turned Canada into an arsenal for democracy.

"I do not need to seek an explanation of this example—this wholehearted war service of our labouring men and women. We know that the enemy seeks to destroy our free way of life; to break down the citadel of human rights which labour has helped to erect over a long period of difficult years. We know that Hitler has destroyed the free trade unions of Germany; that in all Axis countries the workers have reverted to the ancient level of servants to the master's will. As there is no hope for them if Hitler wins, there also is no hope for our workers if we lose this war.

"Life may not have been easy for our workers in past years; in fact, I know it has been hard for many; but life has been free and freedom is the most precious asset in a democracy. So it is to preserve this asset which Hitler would write off on the balance sheet of a world of hate, greed and tyranny that we serve to-day in our different ways.

"Victory in this great war will not be the end for our workers. There must come a reconstruction of the world which will see adequate recognition of their contribution; a raising of the economic standard that will recognize the indispensable partnership of labour.

"After almost three years of this war, what other message can I give, 'Keep at your tasks; do better and better; think of your fellow workers in the navy, the army and the air force, ready to lay down their lives that our country shall be free. They depend on you to give them the tools of war. You are doing that and I know you will carry on until victory has been achieved.'

"It is not going to be an easy victory. It will not come soon. The years ahead will demand greater sacrifices in longer hours of work, heavy taxes, and in doing without many things which we were accustomed to in happier days. But these sacrifices, as we all know, are small in relation to what is at stake.

"I know there have been some irritations in our industrial life since the war began. In this Labour Day message, therefore, I appeal to both management and the workers—to the leaders of the workers, to pledge themselves for uninterrupted production of the materials of war. No difference is so great that there should be silence in the plane factory, in the shipyard, in the gun plant, idle workers outside the gates. Management should recognize in greater measure the legitimate aspirations of labour and should stand ready at all times to confer with employees and work out mutually satisfactory agreements in conditions of employment. Whatever high degree of efficiency management thinks has been attained we must organize for still greater output. There is no interruption of the solemn duty of the brave young men who watch from the deck of a destroyer, stand by a battery on the British coast, or fly in the skies.

"If there are grievances and maladjustments arising out of the very intensity of our effort, the machinery is available for remedial action. Wilful stoppage of production would mean failing those who are willing to die for us.

"Let us make victory secure so we can rebuild a better world; so that mankind may have the more abundant life. Only in such a future is there any peace or security possible for any of us or our children.

"When the victory is ours, Labour will take a greater place, I am sure, in making this a better and happier world. I would leave a thought with you contained in words of William Ellery Channing in his essay on War:

'Labour is discovered to be the great conqueror, enriching and building up nations more surely than the proudest battles.'

"We all must unite to realize this hope of labour when peace returns."

Minister of Labour on responsibility in regard to absenteeism

In meeting the problem of absenteeism as it affects war production, the Minister of Labour, Hon. Humphrey Mitchell, emphasized in a press statement that employers had an urgent responsibility in eliminating all causes of irritation which lead to absenteeism and to provide their employees with every reasonable facility for maintaining an intensified effort.

In this connection the Minister commended the action of the John Inglis Company, Toronto, a large plant employing several thousand women as well as men. "This plant," stated the Minister, "was experiencing a turnover and absentee problem. On its own initiative it took steps to counteract this trouble.

"During the past six weeks a Welfare Supervisor and a Recreation Supervisor have been engaged. Arrangements have been made with local agencies for certain facilities such as swimming pools and gymnasia to be made available to plant workers, the cost to be borne by the plant and made available to workers at a nominal club fee of 15 cents a week. Plans are also under way to take over a roller skating rink which will be converted into a recreation club."

"Remember," declared the Minister, "that absence makes the war last longer, and therefore everyone must concentrate on eliminating this problem."

Labour Day Messages of Canadian Labour leaders

The necessity of constantly improving the war effort is reflected in the Labour Day Messages of Canadian Labour leaders, and a desire of workers to assume a more prominent part in making the war effort more effective.

Mr. J. A. D'Aoust, Secretary-Treasurer, Trades and Labour Congress of Canada declared in part: "There is only one way that the war machines of Nazism and Fascism can possibly be defeated and that is by bigger and better machines, and the workers in this country and our fellow workers in the countries allied with us are the only ones who can build and operate them. This is by far the most important job we have to do—compared with it all other grievances become slight irritations to be speedily forgotten. We must expect and should readily make sacrifices, if necessary, to accomplish the tremendous amount of work that has to be done. But while we are doing these things we must do them as free men and women . . . . We must insist on labour representation on all boards both administrative and advisory. Labour must be recognized as a full partner in this war effort and we must see that we get these things, so that we can go forward in an all-out production war effort, fighting and working for the freedom we cherish as a free people must."

Mr. A. R. Mosher, President of the Canadian Congress of Labour stated: "The primary concern of the people of Canada at the present time is the war effort; there is a general impression that it is not as effective as it should be, and that impression is shared

by the organized workers. Apart from any other factors in the situation, the lack of organization among large groups of workers in various industries is undoubtedly detrimental to maximum production, for the workers will work better under conditions which they have helped to determine through their union representatives than if those conditions are determined solely by the employer. . . .

"In every industrialized nation, the organization of the workers has proved to be beneficial to the public as well as to the workers themselves. . . . In Canada, however, the workers are still waiting for the adoption of a satisfactory Labour policy, and for the establishment of industrial councils and labour-management co-operation plans which have proved so valuable both in Great Britain and the United States."

Mr. Alfred Charpentier, President of the Confederation of Catholic Workers, declared that never had labour been so much to the fore; never had so many people been employed in the country, in both military and civilian occupations. He hoped that governments would learn from the war that workers deserve in time of peace as in war the right to earn a living.

In his Labour Day Message the Secretary-Treasurer of the Canadian Federation of Labour, Mr. W. T. Burford, declared: "The willingness of Canadian workers to do their utmost in the struggle cannot be doubted. They have proved their mettle. They know what is at stake: that defeat means slavery and the end of all that makes life worth living." He also said that the nation's peril was exploited unwittingly by all who refuse to give up, for the duration, any of their peacetime rights. "One of those rights," he said, "is to drive hard bargains in a sellers' labour market. Transcending that right at all times and superseding it in war time is the right of the community to the service of every citizen for its survival."

Appointment of V. C. MacDonald as Assistant Deputy Minister of Labour

The Honourable Humphrey Mitchell, Minister of Labour, announced recently the appointment of Vincent C. MacDonald, B.A., LL.B., K.C., Dean of the Law School of Dalhousie University as Acting Assistant Deputy Minister of Labour. Dean MacDonald for some time has been serving as Controller of Loading Operations at the Port of Halifax. In this capacity he has been in charge of an ambitious project looking to the better organization of shiploading activities at that port, the main objective being the more rapid turn-around of ships.

Before assuming these duties, Mr. MacDonald was Arbitrator at the Port of Halifax for the Department of Labour. He has also served the Department in other capacities. In the summer of 1941 he was a member of the Royal Commission on Shipbuilding which was concerned with the stabilization of the wage rates of the various shipyards in the provinces of Quebec and Ontario. Mr. MacDonald's able performance of these various functions and the skill he displayed in the negotiations they involved have led to his present appointment.

Mr. MacDonald was graduated in law from Dalhousie University in 1920. He practised law in that city from 1920-26, serving as law clerk in the Nova Scotia Legislature 1923-25. He was Research Assistant to the Royal Commission on Maritime Claims, 1926 (Duncan Commission). He practised law in Toronto 1926-30 and while in that city was lecturer at Osgoode Hall School of Law. Dean MacDonald has been a member of the Council of Nova Scotia Barristers Society since 1934 and a member of the Conference of Commissioners for Uniformity of Legislation in Canada since the same date. He has been Editor of Dominion Law Reports 1929-34 and Advisor on Constitutional Law to the Royal Commission on Dominion-Provincial Relations 1930-40.

Mr. Mitchell stated that the Department of Labour was assuming new functions, related to the war effort and the post-war period. He felt that in Dean MacDonald the Department had secured a man who would ably assist in discharging these increased responsibilities.

Personnel administration courses repeated at Queen's University

Hon. Humphrey Mitchell, Minister of Labour, announced recently that the Department of Labour is co-operating with various universities in repeating the courses in personnel management training which were made available this summer. Courses were given at Queen's, Toronto, McGill and the University of British Columbia. The first repeat course conducted by Queen's University, Kingston, will commence about October 13.

Mr. Mitchell said that the decision to repeat some or all of the courses had been made because, with expanding operations and the recruiting of large numbers of new workers, many of them women, companies are continuing to find it necessary to establish personnel departments, headed by persons with specialized training in personnel management.

Referring to the new course at Queen's, the Minister said that applicants nominated by companies with war contracts, or those who might be available for personnel work in war industries will be given preference. The course is not intended for persons seeking employment.

'No tuition or other fees will be charged. The Department of Labour will pay the necessary travelling expenses of all selected applicants who successfully complete the course", Mr. Mitchell said. Living or other allowances must be paid by the applicant or the firm sending him.

The courses require only four weeks full time study. The course at Queen's is divided into two periods of a fortnight each. Experienced personnel managers loaned by industry serve as instructors and draw upon their practical experience in meeting day to day personnel problems for the benefit of the group.

Applications and requests for information should be addressed to the Industrial Relations Section, Queen's University, Kingston.

Four universities have been conducting brief, practical, government sponsored courses in personnel administration since June and some two hundred selected representatives from war and other industries have been in attendance.

Revocation of appointment of H. B. Chase as Controller of National Steel Car Corporation

Reference was made in the September, 1941, issue of the LABOUR GAZETTE (page 1035) to the appointment on August 13, 1941, of Mr. Howard B. Chase as Controller of the Hamilton plant of the National Steel Car Corporation. This appointment and the powers and authorities conferred upon the Controller have now been revoked by Order in Council P.C. 6855 of August 4, 1942.

As Controller of the Hamilton plant of the National Steel Car Corporation, he was given custody and control of the undertaking and was authorized in the name of the Company to manage and carry on the operations of the plant.

Mr. Chase replaced Mr. E. J. Brunning who had been appointed Controller of the plant in April, 1941, on the recommendation of the Minister of Munitions and Supply, as a result of disputes referred to a Board of Conciliation and Investigation established under the Industrial Disputes Investigation Act. These disputes led to a cessation of work by a substantial number of employees which seriously interrupted and impaired the production of munitions following the failure of the Company to comply with recommendations of an interim report of the Board made on April 10, 1941 (LABOUR GAZETTE, May, 1941, pp. 493-94; 527-30; and page 538).

Collective bargaining legislation planned for Ontario

A Canadian Press report of September 2 carried the announcement of the Hon. Peter Heenan, Ontario Minister of Labour that at the next regular session of the Ontario Legislature, labour legislation "to provide for freedom of association and collective bargaining" would be introduced.

He said the Bill would be designed "so that workers can lawfully negotiate with their employers conditions under which they are working and means of settling grievances."

Premier Hepburn, commenting on the proposed legislation, said it would be similar to a type now in force in Nova Scotia.

The Nova Scotia Trade Union Act (LABOUR GAZETTE, August, 1937, page 860) made it lawful for employees to bargain collectively with their employer or employers, and to conduct such bargaining through a trade union and through the duly chosen officers or representatives of such trade union.

It was also declared unlawful for an employer in Nova Scotia to seek to restrain an employee from joining a trade union, or for an employer to make it a condition of employment that the employee refrain from exercising his rights under the Act.

The Nova Scotia Act provides penalties for employers who offend against the Act. Mr. Hepburn spoke of making provision for penalties for both labour and industry in the proposed legislation in Ontario.

National minimum wage established in coal mines in Great Britain

The Government in Great Britain has accepted the recommendations of a Board of Investigation inquiring into wages and wage-fixing machinery in the coal-mining industry, providing for a national minimum wage of 83 shillings a week for all adult underground workers and 78 shillings a week for all adult surface workers.

The Board's recommendation for a flat-rate addition of 2 shillings 6 pence a shift to the wages of underground workers aged 18 years and over and surface workers aged 21 years and over, has also been accepted by the Government. In the case of younger workers additions are provided from 1 shilling 3 pence a shift at 14 years to 2 shillings 3 pence at 17 years for underground workers, and from 9 pence a shift at 14 years to 2 shillings 3 pence at 20 years for surface workers. All of these additions were to be made effective as from June 1, 1942.

The Government has also accepted in principle the recommendation of the Board as to remuneration for increased output which provides for additions to wages in accordance with a sliding scale for increases in output beyond a standard figure to be set for each pit on the basis of a plan set out in the report. It is estimated in the British *Ministry of Labour Gazette,* that the cost of these additions and changes, other than the remuneration for increased output, will be approximately £23,500,000.

The Board of Investigation, which is under the chairmanship of the Rt. Hon. Lord Greene, O.B.E., is continuing its sittings on the second part of the inquiry, namely the examination of the existing machinery for determining wages in the industry.

Mobilization of woman-power in Great Britain

The British *Ministry of Labour Gazette,* in a recent issue, states that the Ministry of Labour and National Service have recently issued a leaflet dealing with the planning of part-time work for women, so as to enable those with domestic responsibilities to be brought more fully into the war effort.

After pointing out that organization and a good deal of extra trouble are necessary for starting part-time work on any considerable scale, the leaflet indicates how both employers and workers may facilitate the establishment of effective arrangements for part-time working, discusses real and imaginary difficulties and how they can be met, explains the advantages of schemes of part-time work, reviews the fields in which the part-time services of women may be and are being most effectively employed, and gives general indications of the arrangements according to which wages and hours of work are most usually regulated in the case of part-time shifts on factory work and other classes of work. Information is also given in the leaflet on the facilities for the recruitment of part-time workers which are provided by the Local Offices of the Ministry of Labour and National Service, at any of which copies of the leaflet and such further information as may be desired may be obtained free of charge.

Juvenile training and entry into employment in Great Britain after the war

A memorandum was recently issued by the Ministry of Labour and National Service on the post-war entry of juveniles into industry. The memorandum was prepared by the London Regional Advisory Council for Juvenile Employment of which Sir Max Bonn is chairman. The views expressed are not necessarily those of the Ministry. The interlocking interests of education and industry are emphasized and recommendations are made on both aspects of the problem.

On the educational side it is assumed that the school-leaving age will be raised to 15 or 16, compulsory day continuation classes will be set up for all those under 18 in employment and a common system of post-primary education, comprising various types of schools, will be established. In every type of school, training for life should be an integral part of the life and work of the school, but except in schools directly concerned with technical education no attempt should be made at training for specific jobs. Pupils should, however, be given some acquaintance with the elementary processes performed in factories and offices and the possibility of occupational guidance by qualified teachers should be considered. Day continuation schools, to be well established, should have the wholehearted support of the employers.

On the industrial side two points of view are outlined: (1) that young people should as soon as possible come to regard themselves as part of the adult labour force, and (2) that the adolescent period in industry is essentially an extension of the educational process. The memorandum suggests that these two views can be reconciled if the young worker is thought of from the broad standpoint of entry into employment, which is rightly conceived as a continuous process moving by degrees from school life into the sphere of youthful work and then into the wider world of adult labour.

Considerable improvement is needed in the services provided to young workers. The school medical service should be extended to all minors, welfare work should be more closely related to their needs and should cover home problems, adequate transport should be provided and studies should be made as to the optimum length of the working day.

It is urged that in the post-war period plans should be made to retain youths in school until adequate regulation of their movement into industry can be effected. It may be necessary in the transition period to give prior consideration to the older boys and girls trained for war industries. Lessons may be learned from experience with wartime legislation: the Essential Work Order, for example, may contain elements of permanent value, especially for juveniles.

U.S. War Labor Board declines to reduce north-south wage differential

The United States National War Labor Board declined to interfere with the wage differential existing between northern and southern textile mills when ruling on the application of 59 mills for wage increases. It declared:

"There is little merit, indeed, to the proposition to readjust the differential now, primarily in preparation for post-war competition, at the cost of increasing 80 per cent of the industry's employees who work in the South beyond that point which is now necessary to stabilize wages in that area. Such an approach would be in utter disregard of the responsibility of the Board to stabilize wage-rates in conformance with the national stabilization program."

In an earlier case the Board had consented to scale down the differential in the aluminum industry when granting wage increases to two southern plants at Alcoa, but it declared that complete elimination of the differential would have an undesirable disrupting effect at this time on the economy of the areas in which aluminum plants were located. (LABOUR GAZETTE, March, 1942, p. 258).

In the textile case the 28 northern and 11 southern mills organized by the Textile Workers Union had applied to the Board for a 20-cent wage increase for the southern mills and a 10-cent increase for the northern ones. The latter request was supported by 12 northern mills organized by the United Textile Workers and by 8 other northern mills. The northern mill owners supported the application for reduction of the wage differential which in February, 1942, amounted to $4.64 on average weekly earnings.

Ignoring the plea for reducing the differential, and the fact that cotton textile wages were substandard, averaging 51·5 cents an hour in April, 1942, compared with an average of 81·9 cents for all manufacturing, the Board granted a flat 7½ cent increase on wage rates in all 59 mills. Its object was solely to remove inequalities between the mills involved and other textile firms competing in the same labour market.

U.S. War Labor Board refuses maintenance of membership clause to union on strike

On August 27 the United States War Labor Board unanimously voted to deny a maintenance of membership clause to the Chemical Workers' Union (American Federation of Labor) which had called a strike in a Massachusetts plant in violation of a no-strike pledge. The strike was called on July 15 and ended on July 20 when the case was certified to the Board. The union was attempting to enforce a claim for a union shop and the check-off, but it stated that it would regard a maintenance clause as acceptable. This clause provides that existing members may not leave a trade union for the duration of the agreement. It was devised by the Board as a means of meeting the twin claims of employers that no worker should be compelled to join a trade union and of unions that they should be protected at a time when they have voluntarily surrendered some of their most important rights (*see* LABOUR GAZETTE, July, 1942, p. 812).

The opinion of the Board, which was written by a public member, stated that:

"The granting of union security to this union must at least be postponed until such time as this union demonstrates that it has adopted a change of attitude in regard to the use of the strike weapon during the period of this war. . . The important point for all concerned to remember is that when labor agreed to forfeit its right to strike for the duration of the war the Government provided it with an orderly and impartial tribunal to settle its disputes with industry. So long as the National War Labor Board functions there is neither need nor justification for strikes."

Compulsory health insurance in Rhode Island

The first compulsory health insurance law in the United States was passed by Rhode Island on April 29. The law extends the principle of unemployment compensation to cases where the worker is unemployed due to sickness rather than to lack of work. It does not provide for medical care.

If a worker is unable to perform any service for wages due to his physical or mental condition and is not receiving unemployment benefits he is eligible for cash compensation for sickness. Benefits range from $6.75 to $18 a week, depending on the worker's earnings in the preceding calendar year. Compensation is paid out of a fund made up of contributions by workers and employers, interest and certain penalties paid under the law. The workers' contributions are one per cent of their wages up to $3,000 in any year.

The existing unemployment compensation board will administer the new law through the local public employment offices. Impartial referees are to be appointed to deal with disputed claims but appeals from their decisions may be made to the board which has power to require any claimant for benefits to submit to a reasonable examination by an expert to determine his physical or mental condition. Benefits will not be payable until after April 1, 1943.

Conference of Inter-American Committee to Promote Social Security

A conference of the Inter-American Committee to Promote Social Security was held on September 12-16 in Santiago under the auspices of the Chilean Government. (LABOUR GAZETTE July, 1942, page 759.) It brought together delegates of the central administrations

and institutions responsible for the execution of social security programs, including Government, employers' and workers' members of boards of management or officials belonging to the administrative, technical or medical staff of the insurance and welfare institutions. Invitations were also extended to chairmen and members of technical or advisory boards dealing with social security. The Governing Body of the International Labour Office was represented by a tripartite delegation.

As a preliminary step basic reports were issued on each of the questions on the agenda. Four of these, which were written by experts from various American countries, are available on application to the International Labour Office, 3840 University Street, Montreal. Their titles are: "Extension of Social Insurance Coverage to Agricultural Workers, to the Self-Employed and to Domestic Servants"; "Efficacy and Economy of Medical and Pharmaceutical Benefits in Health Insurance Plans"; "Formulating a Disability Insurance Program"; "Protection of People's Health Through Social Insurance". Two others, written by Chilean experts, were made available to the Conference delegates during the first week of September: "The Most Expedient Financial Systems, Having Regard to the Extent of Coverage, the Characteristics of the Insured Population and the Necessity of Continuity of Insurance Protection"; "Desirability of a Uniform System of Vital Statistics on an Etiological Basis." The International Labour Office has also published a 100-page study entitled "Approaches to Social Security" in which is surveyed the evolution of social insurance and assistance (Studies and Reports, Series M, No. 18).

The Inter-American Committee to promote Social Security resulted from a meeting of leading administrators and diplomatic representatives of American countries who had assembled in Lima in December, 1940, on the occasion of the opening of the Workers' Hospital built by the National Insurance Fund of Peru. At this meeting it was resolved that such a Committee should be established "to make possible a systematic and continuous exchange of information among the social security institutions of the American countries", and that it should operate in conjunction with the International Labour Office and "adopt the principles underlying the resolutions on social security approved by the Labour Conferences of the American Countries which are Members of the International Labour Organization."

The Conferences of American Countries referred to were held in Santiago in January, 1936, and in Havana in December, 1939. They were composed of government, employers' and workers' delegates. A program of compulsory social insurance was drawn up in which it was recommended that "each country should establish compulsory social insurance covering industrial accidents and occupational disease, sickness, maternity, old-age, invalidity, premature death and involuntary unemployment," and that such insurance "should apply to all employed persons, including agricultural workers as soon as the conditions prevailing in the rural areas of each country allow; also to persons working on their own account."

Regulating The Employment of Women in Michigan

Recognizing that the wartime employment of women calls for special regulation, the Commissioner of Labour for Michigan on June 17 issued a series of regulations supplementing the State's general prohibition that "no female shall be given any task disproportionate to her strength, nor shall she be employed in any place detrimental to her morals, her health, or her potential capacity for motherhood."

The regulations forbid the employment of women in processes using lead, benzene, carbon disulphide, mercury, arc welding and dry grinding wheels unless the ventilation and working conditions are approved by the Department of Labour and Industry. Women may not be required to lift weights in excess of 35 lbs. nor to carry more than 20 lbs. while ascending stairs, and shall not be permitted to do any type of overhead lifting or stacking. They may not work in any part of a foundry except core rooms.

No woman is to remain standing constantly and employers must provide seats for female employees. They must also furnish women's dressing rooms and first-aid stations with a cot.

Employers are forbidden to discriminate in the payment of wages between male and female workers engaged in the production of articles of like value whether they are paid on a piece work or time basis. This provision was incorporated in the Michigan Penal Code in 1931.

In addition, the Commission recommended that employers provide sanitary lunch rooms, grant 15 minute breaks in the middle of spells and insist on the wearing of proper safety clothing.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

IN the month of August fifteen applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From employees of the Canadian Marconi Company, Limited, Montreal, P.Q., members of the Montreal Metal Trades Council's Marconi Union. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 1,400 employees directly and 400 indirectly. On August 18 Mr. Bernard Rose, K.C., of Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

2. From employees of the Whitby Malleable Iron and Brass Company, Limited, Whitby, Ont., members of Local 2458, United Steelworkers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 88 employees directly. On August 11 Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

3. From employees of the Royal View Mine, Lethbridge, Alta., members of Local 7302, United Mine Workers of America. The dispute, which arose out of a request for provision for seniority rights and wage adjustments in the negotiation of a new collective agreement, was said to affect 24 employees directly. On August 18 Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, Vancouver, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

4. From employees of the Chester Mine, Lethbridge, Alta., members of Local 7751, United Mine Workers of America. The dispute, which arose out of a request for provision for seniority rights and wage adjustments in the negotiations of a new collective agreement, was said to affect 11 employees directly. On August 18 Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, Vancouver, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

5. From employees of the Dominion Bridge Company, Limited, the Manitoba Bridge and Iron Works, Limited, and the Vulcan Iron Works, Limited, all of Winnipeg, Man., members of Lodge 646, International Association of Machinists, Local 126, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, Local 174, International Moulders and Foundry Workers' Union of North America, and Local 565, International Brotherhood of Blacksmiths, Drop Forgers and Helpers. The dispute, which arose out of a request for union recognition and collective agreements, was said to affect approximately 1,500 employees directly. On August 18 Mr. R. H. Hooper, Industrial Relations Officer of the Dominion Department of Labour, Winnipeg, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

6. From employees of J. Ford and Company, Limited, Portneuf Station, P.Q., members of the National Catholic Union of Paper Workers of Portneuf Station. The dispute, which arose out of a request for union recognition and a collective agreement providing for adjustments in wage rates, was said to affect approximately 155 employees directly.

7. From employees of Dominion Lime, Limited, Lime Ridge, P.Q., members of the National Catholic Union of Dominion Lime Employees. The dispute, which arose out of a request for union recognition and a collective agreement providing for adjustments in wage rates, was said to affect approximately 110 employees directly. On August 21 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

8. From employees of the Taylor Electric Manufacturing Company, Limited, London, Ont., members of Local 517, United Electrical, Radio and Machine Workers of America. The dispute, which arose out of a request for union recognition and a collective agreement providing for adjustments in wage rates, was said to affect approximately 100 employees directly. On August 27 Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. Pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, Commissioner Ainsborough was also authorized to investigate the dismissal, on August 26, of the president of the local union from the service of the employing company, allegedly on account of his union membership and activity.

9. From employees of the Canada Paper Company, Windsor Mills, P.Q., members of

the National Catholic Union of Canada Paper Company Employees. The dispute, which arose out of a request for union recognition and a collective agreement providing for adjustments in wage rates and improved working conditions, was said to affect between 800 and 900 employees directly.

10. From employees of Bruck Silk Mills, Limited, Cowansville, P.Q., members of the National Union of Silk Workers of Cowansville, affiliated with the Canadian Congress of Labour. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 1,000 employees directly.

11. From employees of the Dominion Engineering Works, Limited, Longueuil, P.Q., members of the Metal Trades Council of Montreal and Vicinity. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 1,000 employees directly. On August 29 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

12. From employees of Engineering Products of Canada, Limited, Montreal, P.Q., members of the Metal Trades Council of Montreal and Vicinity. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 1,000 employees directly.

13. From employees of the Atlantic Sugar Refineries, Limited, Saint John, N.B., members of Local 20, Sugar Refinery Workers' Union, affiliated with the Trades and Labour Congress of Canada. The dispute, which arose out of a request for a new collective agreement, providing for the union shop, adjustments in wage rates, changes in hours of labour and improved working conditions, was said to affect approximately 245 employees directly.

14. From employees of the Dominion Paper Company, Kingsey Falls, P.Q., members of the National Catholic Union of Paper Workers of Kingsey Falls. The dispute, which arose out of a request for increased basic wage rates and the payment of war-time cost-of-living bonuses, was said to affect 63 employees directly. Inasmuch as the matters in dispute related to the remuneration of the employees concerned, the interested parties were advised that a Board of Conciliation and Investigation would not be established to deal with the dispute, and that, in accordance with the provisions of Order in Council P.C. 5963, these matters would have to be referred to the Quebec Regional War Labour Board for decision.

15. From employees of De Havilland Aircraft of Canada, Limited, Toronto, Ont., members of Local 112, United Automobile Workers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 2,900 employees directly.

Boards Established

On August 6 a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Longue Pointe Works, Montreal, P.Q., members of Local 2525, United Steelworkers of America. During the month of July Mr. Bernard Rose, K.C., Montreal, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (LABOUR GAZETTE, August, 1942, page 883). The Commissioner's report, received on August 6, indicated that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a board. The personnel of the board is as follows: Prof. J. C. Cameron, Queen's University, Kingston, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. R. L. Calder, K.C., Montreal, appointed on the nomination of the employees; and Mr. D. A. Paterson, also of Montreal, appointed on the nomination of the employer.

On August 7 a Board of Conciliation and Investigation was established to deal with a dispute between the R.C.A. Victor Company, Limited, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's R.C.A. Union. During the month of July Mr. Bernard Rose, K.C., had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (LABOUR GAZETTE, August, 1942, page 883). The Commissioner's report, received on August 7, indicated that he had been unable to effect a mutally satisfactory settlement of the dispute and recommended the establishment of a board. The personnel of the board is as follows: the Honourable Mr. Justice M. B. Archibald, of the Supreme Court of Nova Scotia, Halifax, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Drummond Wren, Toronto, appointed on the nomination of the employees; and Mr. J. J. Perrault, Montreal, appointed on the nomination of the employer.

On August 24 a Board of Conciliation and Investigation was established to deal with a dispute between the Chrysler Corporation of

Canada, Limited, Chatham, Ont., members of Local 127, United Automobile Workers of America (LABOUR GAZETTE, August, 1942, page 884). On August 11 Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner's report, received on August 24, indicated that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a board. Messrs. Drummond Wren, Toronto, and J. A. McNevin, K.C., Chatham, Ont., were appointed members of the board on the nomination of the employees and employer, respectively, and at the end of the month were conferring with a view to submitting a joint recommendation of a person to be appointed third member and chairman of the board.

Board Fully Constituted

The constitution of the Board of Conciliation and Investigation established in July to deal with the dispute between Brantford Coach and Body, Limited, Brantford, Ont., and employees in its Mohawk Street plant, members of Local 397, United Automobile Workers of America (LABOUR GAZETTE, August, 1942, page 884), was completed during the month of August. The personnel of the board is as follows: the Honourable Mr. Justice J. G. Gillanders, of the Supreme Court of Ontario, chairman, appointed on the joint recommendation of the other two members; Mr. Drummond Wren, appointed on the nomination of the employees; and Mr. V. A. Sinclair, K.C., appointed on the nomination of the employer. All three reside in Toronto.

Board Reconvened

On August 21 the Board of Conciliation and Investigation which had dealt with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists (LABOUR GAZETTE, August, 1942, pages 885 and 886-890) was requested by the Minister of Labour to reconvene for the purpose of giving further consideration to the dispute. The employees concerned had submitted a brief to the Minister contending that the majority report of the board had not taken sufficient account of a number of important relevant facts.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

On August 6, pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dismissal of an employee of De Havilland Aircraft of Canada, Limited, Toronto, allegedly on account of his membership in and activity on behalf of Local 112, United Automobile Workers of America.

On August 11 Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, Vancouver, was authorized as Industrial Disputes Inquiry Commissioner, to investigate a dispute between West Coast Shipbuilders, Limited, Vancouver, and its employees, members of Local 1, Boilermakers and Iron Shipbuilders' Union of Canada, in connection with which an application had been received in May for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, June, 1942, page 660).

On August 11 Mr. J. S. McCullagh, Industrial Relations Officer of the Dominion Department of Labour, Ottawa, was appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between Algoma Ore Properties, Limited, Wa Wa, Ont., and its employees, members of Federal Labor Union 23159, American Federation of Labor, in connection with which an application had been received in July for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, August, 1942, page 884).

On August 14 Mr. H. R. Pettigrove, Industrial Relations Officer of the Dominion Department of Labour, Fredericton, N.B., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between Pictou Foundry and Machine Company, Limited, Pictou, N.S., and employees in its Shipbuilding Division, members of Local 565, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, in connection with which an application had been received in June for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, July, 1942, page 761). The Commissioner's report, received on August 27, indicated that a dispute no longer existed and that the application had been withdrawn.

On August 15 Mr. H. R. Pettigrove, Industrial Relations Officer of the Dominion Department of Labour, Fredericton, N.B., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between Halifax Shipyards, Limited, Halifax, N.S., and its employees, members of Local 361, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, and Lodge 1250, International Association of Machinists, in connection with which an application had been received in July for the establishment of a Board of Conciliation

and Investigation (LABOUR GAZETTE, August, 1942, pages 883-884).

On August 18, pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dismissal of two employees of H. Walford, Limited, Montreal, allegedly on account of their membership in and activity on behalf of Local 21, International Moulders and Foundry Workers' Union of North America. The Commissioner's report, received on August 27, indicated that the employing company had agreed to reinstate the dismissed employees.

Other Reports of Industrial Disputes Inquiry Commissioners

A report was received on August 3 from His Honour Judge I. M. Macdonell, Toronto, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between Dumart's, Limited, Kitchener, Ont., and its employees, members of Local 139, Packinghouse Workers Organizing Committee (LABOUR GAZETTE, July, 1942, page 762). The Commissioner's report indicated that no good purpose would be served by the establishment of a Board of Conciliation and Investigation to deal with the dispute. For the consideration of the interested parties, however, the Commissioner made certain recommendations with a view to the mutually satisfactory settlement of the matters at issue. These recommendations were communicated to the parties immediately.

A report was received on August 11 from Mr. J. S. McCullagh, Industrial Relations Officer of the Dominion Department of Labour, Ottawa, who had been appointed an Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Muir Bros. Dry Dock Company, Limited, Port Dalhousie, Ont., and its employees, members of Local 680, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America (LABOUR GAZETTE, August, 1942, page 883). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute and that the application had been withdrawn. The collective agreement executed by the interested parties is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

A report was received on August 18 from Mr. J. P. Nicol, Industrial Relations Officer of the Dominion Department of Labour, Toronto, who had been appointed an Industrial Disputes Inquiry Commissioner, pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, to investigate the dismissal of an employee of Midland Shipyards, Limited, Midland, Ont., allegedly on account of his membership in and activity on behalf of Local 365, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America. The Commissioner found that the employee in question had been dismissed because of the unsatisfactory manner in which he performed his work and not because of his union membership or activity.

A report was received on August 21 from Mr. James Leslie, Chief Conciliation Officer of the Manitoba Department of Labour, Winnipeg, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Western Packing Company of Canada, Limited, Winnipeg, and its employees, members of Packing Plant Employees' Federal Union 92, affiliated with the Trades and Labour Congress of Canada (LABOUR GAZETTE, May, 1942, page 514). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute. The collective agreement executed by the parties concerned is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

Other Settlement

During the month of August notification was received of the conclusion of collective agreements between the Rolland Paper Company, Limited, and its employees at St. Jerome and Mont Rolland, P.Q., members of Local 454 and 455, International Brotherhood of Paper Makers, and Local 106, International Brotherhood of Pulp, Sulphite, and Paper Mill Workers. The dispute between these parties had been referred for investigation to Mr. Bernard Rose, K.C., Industrial Disputes Inquiry Commissioner, who was successful in arranging for direct negotiations between the parties (LABOUR GAZETTE, July, 1942, page 762). The clauses in the new agreements which affect the remuneration of the employees concerned have been approved by the Quebec Regional War Labour Board and the employees have withdrawn their application for the establishment of a Board of Conciliation and Investigation. The agreements are summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

Supplementary Report of Board

The Board of Conciliation and Investigation established in 1941 to deal with a dispute between the Hamilton Uniform Cap Com-

pany, Hamilton, Ont., and its employees, members of Local 47, United Hatters, Cap and Millinery Workers' International Union (LABOUR GAZETTE, March, 1941, page 227-231) subsequently was reconvened to deal with matters still in dispute (LABOUR GAZETTE, August, 1941, page 876). The Board, in a report signed by Mr. E. A. Shaunessy, K.C., Petrolia, Ont., chairman, and Mr. Kevey Koskey, Hamilton, Ont., the member appointed on the nomination of the employer, has advised the Minister of Labour that a dispute no longer exists, inasmuch as few, if any, of the employees concerned are still members of the union. Mr. J. L. Cohen, K.C., Toronto, Ont., the member appointed on the nomination of the employees, did not join with his Colleagues in submitting the supplementary report, but Mr. Cohen has advised the Department of Labour that he does not consider it necessary to give the matter any further attention.

ROYAL COMMISSION RECOMMENDS CONTINUOUS OPERATION IN BRITISH COLUMBIA SHIPYARDS

THE Royal Commission appointed on July 13, 1942 (LABOUR GAZETTE, July, 1942, pp. 773-74) to inquire into the most effective methods to secure maximum production in the shipyards of British Columbia, has recommended to the Minister of Labour that this objective can be attained by the "continuous operation" plan.

The Royal Commission, which has conducted an exhaustive inquiry into the relative merits of the seven-day week and a six-day schedule of operations, was comprised of five members under the chairmanship of Mr. Justice S. E. Richards of the Court of Appeal of Manitoba. Two members of the Commission, Mr. Don Serviss, general-manager of North Vancouver Shipyards, and Mr. Hugh Lewis, general-manager of South Yard, Burrard Dry Dock, Vancouver, represented the employers; while representing the employees were Mr. Chris Pritchard, of the United Association of Plumbers and Steamfitters and President of the Metal Trades Council, Vancouver, and Mr. A. A. McAuslane, vice-president of the Canadian Congress of Labour, Vancouver.

The report of the Commission is based upon a study of United States Pacific Coast Shipyards, where the continuous operation plan is in effect, and upon the production figures in Vancouver Shipyards which put the seven-day week plan into operation on April 27 last.

In the course of its investigation the Commission visited shipyards in the United States and was much impressed with the production figures being obtained under the seven days continuous operation program. Both management and men in the United States shipyards were enthusiastic supporters of the seven-day week plan.

Majority Report

The majority report, signed by the Chairman, Mr. Justice S. E. Richards and Messrs. Don Serviss and Hugh Lewis, states that the evidence of shipbuilders in British Columbia was practically unanimous in the view that the plan of continuous operation, in which the men work six days and have one day of rest in each week, but the plant, tools and equipment are operated on all seven days of the week, is the most effective way of securing maximum production.

PRODUCTION FIGURES CITED

In the opinion of the Commissioners who signed the report, the success and greater possibilities of the continuous operation plan are proven by the results obtained in two major Vancouver shipyards where the seven-day week has been in operation.

In one of these yards, the daily average of steel fabricated increased 41·2 per cent and of steel erected 19·3 per cent in the period April 20-July 18 under continuous operation over the average for April 1-26 when a 15½-shift week was in effect.

In the second yard, the weekly average of steel fabricated increased 56 per cent and of steel erected 47 per cent in the period June 1-30, when 21 shifts were operating, over the average for April 1-26, when 15½ shifts were operating. In this yard the average weekly quantity of steel welded and riveted increased 37 per cent during the period of continuous operation.

Commenting on these figures, the majority report states that they were remarkable in view of the fact that the continuous operation plan required employment of more men who in the main were unskilled and who, to some extent, diluted the average skill of the whole working force. The Commission points out that the small percentage drop in production per man hour in one yard is no doubt due to many unskilled men being necessarily employed and this figure would doubtless decrease as time went on. It was felt that this was relatively unimportant in view of the necessity of maximum production.

SPECIAL COMMITTEE APPOINTED

Following a series of meetings with shipyard operators and employees in the spring, at which the Minister of Labour was present, nine of the eleven unions representing British Columbia shipyard employees signed an agreement approving the continuous operation plan.

Subsequently, however, the remaining two unions declined to sign the agreement. All the unions involved then formed a Conference and sent a delegation to Ottawa in June, after which the Minister of Labour decided to appoint a Commission to inquire into the whole matter and to generally investigate facts which might be impeding production at West Coast shipyards.

One of the first acts of the Commission was to set up a special committee under the chairmanship of Mr. Norman Dobson, of Lloyds, who is at present attached to Wartime Merchant Shipping, Limited. This committee, which comprised representatives of shipyard managements and experienced workmen, made a thorough survey of the British Columbia shipyards and reported on technical matters which it considered would increase production.

The Commission stated in its report that it anticipated the recommendations of the committee would be of considerable help in removing minor impediments to production.

The technique of appointing a committee of experts representing employees and management to act under the instructions of a Commission is somewhat unique and in this case proved very effective. This procedure was recognized by both management and men as a very practical means of going about the removal of bottlenecks in individual yards.

UNANIMOUS RECOMMENDATIONS

Included among the unanimous recommendations of the Commission is the appointment of a Labour Co-ordinator for each of the major British Columbia Shipyards to act as an intermediary and director of good relations between employers and employees; each co-ordinator to be selected by the labour unions having members in the yards and to be approved by the shipbuilder.

Other unanimous recommendations were:

Uniformity of wages in the same occupational classifications throughout the Vancouver yards.

The recommendation of the Technical Advisory Committee be enforced.

Skilled tradesmen to be supplied to fill up gangs.

Labour Management Production Committees to be installed.

Progressive reports to be made available to workers.

Training of Supervisory Staff to be put in hand.

Vocational Training for Workers recommended.

Welding fumes to be overcome.

Periodical medical examination.

Spray painting to be done on third shift.

Safety Committee to be appointed.

Housing accommodation for shipbuilders to be given priority.

Recreation facilities would bring improvement and reduce labour turnover.

Drying rooms for workmen's clothes.

Dressing rooms to be provided.

Shift ratios to be adjusted.

Castings to be bought locally when possible.

Yards to be kept informed of all tools and equipment that can be obtained as required.

The Majority Report on the continuous operation plan mentions that employees feel "genuinely and earnestly" that they have a grievance in the change of their day off from Sunday to a week-day, but expresses the hope that complete harmony will exist in the shipyards in which the workmen and the managements are performing such valuable war work, so vital at the present time.

Minority Reports

In minority reports, however, Messrs. C. W. Pritchard and A. McAuslane, representatives on the Commission of organized labour, disagreed with the majority finding and favoured a six-day week. Maximum production, Messrs. Pritchard and McAuslane contended, cannot be achieved until there is closer harmony between operators and men, which, they maintain, is not possible under a plan which calls for continuous operation, because shipyard employees have a grievance as a result of the necessity of changing their day off from Sundays to weekdays.

Mr. Pritchard contended that the evidence produced before the Commission proves conclusively that the seven-day plan does not work out satisfactorily and will not produce the practical results contemplated; as employees are dissatisfied with the staggered days and working conditions. Particularly are they out of harmony with the general prevailing conditions in which transportation, housing, absenteeism, and the conditions prevailing in co-related industry do not permit of the successful operation of the plan and produce a condition of discontent that is destructive of efficient production on this basis.

Mr. McAuslane, in opposing the seven-day week, maintained that no plan can be productive of the best results which has not the full co-operation of the workers and recommends that a Joint Conference of shipowners, unions affected and government representa-

tives, take place at an early date to iron out wage inequalities and other anomalies existing in the industry. He expressed the opinion that the merits of both the continuous operation and six-day plan cannot be fully judged until both have been given an equal trial, and urged that labour's plan for production on a six-day week basis be put into effect immediately.

Statement by Minister of Labour

Commenting on the report, the Minister of Labour expressed himself as being of the opinion that the Commission had approached the problem in a very practical way and had, in his judgment, completely covered all phases of the matter.

He felt that the recommendations of the Commission were very sound and hoped that the investigation and report would go far toward correcting conditions which were impeding production and toward clearing up misunderstandings between management and employees.

He was confident that both management and men would accept the recommendations and put them into effect.

The Minister further stated that in so far as the Department of Labour was concerned, everything in its power would be done to bring about acceptance of the recommendations and he had asked the chairman (Mr. Justice Richards) to come to Ottawa to discuss in detail how best the various recommendations could be made effective.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1942

DURING the month of August, the number of disputes and lockouts showed a decrease from the previous month, 59 disputes being recorded, as compared with 73 for July. The number of workers involved, 21,795 for August, and 22,672 for July, and the time loss, 53,535 man working days for August and 54,402 for July, showed only a slight decrease from the previous month, as several strikes in August involved a comparatively large number of workers with a corresponding time loss. These were coal miners at Blairmore, Coleman and Bellevue, Alta., coal miners at Nanaimo, B.C., shoe factory workers in both Montreal and Quebec, P.Q., steel mill workers at Longue Point, P.Q., and shipyard workers at Sorel, P.Q.

The following comparative table gives information for July and August, 1942, and August, 1941.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*August, 1942.....	59	21,795	53,535
*July, 1942.....	73	22,672	54,402
August, 1941.....	35	13,314	33,569

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 1,310 workers, were carried over from July and 53 commenced during August. Of these 59 disputes 52 were terminated during the month. Five resulted in favour of the workers, six were compromise settlements, 11 were in favour of the employer, while 30 were indefinite in result.

At the end of the month there were seven strikes or lockouts reported as in progress: shoe factory workers at Quebec, P.Q., textile factory workers at Hull, P.Q., lumber yard workers at Fernie, B.C., lumber yard labourers at Charlottetown, P.E.I., foundry workers at Hull, P.Q., optical workers at Montreal, P.Q. and carpenters and labourers at Quebec, P.Q. The majority of these were terminated shortly after the first of September with little time loss.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one dispute of this nature, namely: truck drivers and helpers, Toronto, Ont., October 7, 1941, to December 31, 1941.

Information as to a strike in July of workers at one shipyard in Victoria, B.C., was received too late for inclusion in the August LABOUR GAZETTE. Two hundred workers ceased work on July 30 protesting the dismissal of a superintendent. Work was resumed within a short time after the superintendent had resigned.

A number of disputes and minor work stoppages were reported during the month. One dispute involving a number of carpenters at Barriefield, Ont., occurred on August 14. It was

reported the dispute arose after the completion of work on one project and before transference to another job.

Information as to a strike of a number of leather workers in one establishment in Montreal, P.Q., on August 14 was received at too late a date for inclusion in the statistical table. The workers asked for increased wages and returned to work on the advice of the union, pending further negotiations.

A minor dispute in the fertilizer and feed department of one establishment in Toronto, Ont., took place on August 18, when 30 workers asked for increased wages. Work was resumed within a short time when an agreement was reached that a joint application would be made to the Regional War Labour Board.

It was reported that on August 31 about 20 transport workers employed at one establishment in Windsor, Ont., ceased work for increased wages. After negotiations with a representative of the company it was claimed the men were joined by 10 other workers, the 30 men stopping work for the remainder of that day. Work was resumed the next day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

DISPUTES IN PROGRESS PRIOR TO AUGUST

WELDERS (SHIPYARD) VANCOUVER, B.C.—This dispute, involving welders, members of the Welders' Unit of the Amalgamated Building Workers of Canada, affiliated with the Canadian Federation of Labour, who ceased work on June 12 in protest against the dismissal of certain workers on June 4 and against a closed shop agreement between the employer and the Boilermakers and Iron Shipbuilders' of Canada, affiliated with the Canadian Congress of Labour, was terminated on August 5, when the welders agreed to join the boilermakers' union, all being reinstated within two days. The settlement was reached as a result of conciliation by the Chairman of the Royal Commission on Shipbuilding Production.

DISPUTES COMMENCING DURING AUGUST

COAL MINERS, AERIAL, ALTA.—The miners ceased work on August 6, claiming that the employer had refused to make adjustments in certain rates of pay, piece work, etc., and in Sunday work, overtime and timbering. They were advised by a union district representative to resume work pending negotiations. This resulted in settlements on all issues except one left for further investigation.

COAL MINERS, INVERNESS, N.S.—Contract miners in one of three collieries left the mine on August 8, owing to a lack of transportation to their working places, and operations were stopped. A second colliery was also closed, as the pumps were operated by the same power, thus involving 280 miners. It was reported that the permanent closing down of two of the collieries was under consideration. A mining engineer was appointed to investigate the three mines and by the end of the month it was reported that two collieries would continue. One of the closed collieries was in operation by the first of September.

COAL MINERS, CROW'S NEST PASS DISTRICT, ALTA.—Following a one day stoppage of work on July 31 in four colleries, operated by three companies, owing to a dispute as to rates of pay for boys, another stoppage occurred on August 10. In each case a mass meeting of miners was called to discuss the issue. The miners contended that in the agreement the rates for boys, $3.30 on the surface and $3.85 underground, were intended only for light work and that when employed at any of the classified jobs in the agreement they should receive the same pay as men. It was reported that at the meeting it was decided to instruct the District President of the Union to negotiate with the commissioner of the Western Canada Bituminous Coal Operators' Association and if this was not conceded to refer the question to the National War Labour Board for decision instead of an impartial chairman as provided in the agreement.

COAL MINERS, NANAIMO AND CUMBERLAND, B.C.—Employees in collieries at Nanaimo and Cumberland on Vancouver Island, B.C., ceased work at the beginning of the Sunday night shift on August 16; owing to a dispute as to an increase of 30 per cent in the basic wage scale. The agreement had been made in 1938 and wages have been supplemented by a cost of living bonus, which had been increased to 61 cents per day. The miners claimed that the agreement rates were low as compared with those in other industries and that under government regulations they were not allowed to leave the mines for work at higher wages elsewhere. They requested the employing company to join in an application to the National War Labour Board for the increase. This was refused as the prices of coal were fixed by the Wartime Prices and Trade Board. It was reported that the stoppage was not ordered by the union and on advice from the district headquarters the men decided to resume work at 11 p.m. on August 18, pending decision of the Board.

COAL PIER LOADERS, UNION BAY, B.C.—Employees of a coal mining company at the loading piers at Union Bay ceased work on August 17, when the mines were closed down owing to the strike of miners. Most of the coal pier

loaders were reported to be Chinese and not covered in the coal miners' agreement. They sought an increase in wages from 31½-50 cents per hour to 40-60 cents. They did not resume work with the miners but as a result of conciliation by a representative of the Department of Labour they returned to work on Sunday August 23 and applied to the National War Labour Board for approval of the higher rates.

Shoe Factory Workers, Quebec and Montreal, P.Q.—A number of employees in one shoe factory in Quebec ceased work on August 6 to obtain the payment in full of a cost of living bonus on the basis of 7·2 per cent, that is $1.80 per week for adult male and female workers earning $25 per week or more, with a percentage bonus for other workers, ordered by the Quebec Regional War Labour Board early in July, to meet the increase in the cost-of-living since July, 1941, following a strike of shoe workers in Quebec City between June 23 and July 5. In this establishment the employer had given a five per cent bonus since August, 1941, and deducted this from the new bonus. The order applied to all shoe factories in the province of Quebec.

In several factories in Montreal increases in wages or cost of living bonuses had been given during 1941 and the employers proposed to deduct these from the new bonus and in some cases had referred the matter to the Board. Between August 15 and August 24 workers in eight shoe factories ceased work against the modification in the bonus but as a result of conciliation by the Quebec Department of Labour they resumed work at various times between August 17 and August 27, pending the decision of the Board in the case of each employer. It was reported that each employer was to deposit with the Board the full amount of the bonus, pending their decisions.

Paper Mill Workers, Windsor Mills, P.Q.—A number of the employees in a paper mill ceased work on August 9, to secure an agreement with the National Catholic Syndicate. A number of the employees were members of the International Brotherhood of Paper Makers, affiliated with the American Federation of Labor. Picketing was reported to have prevented the workers from entering the premises, except for a few maintenance men, and a clash occurred between supporters of the two unions. Six men were charged with disturbing the peace and remanded for trial. A conciliator from the Quebec Department of Labour arrived and met with representatives of the management and the Syndicate. The management refused to recognize the union and declared that members of the office staff, the technical staff and any employees on salary must resign from the union or give up their positions. A representative of the management met officials of the Department of Labour at Ottawa and discussed proceedings under the Industrial Disputes Investigation Act. Work was resumed on August 13 and the employees applied for a Board under the Act. An Industrial Disputes Inquiry Commissioner was appointed on September 2 to deal with the dispute.

Paper Mill Workers, Portneuf Station, P.Q.—A number of employees in one mill ceased work on August 16 to obtain a ten per cent increase in wages. The employees had applied on August 9 for a Board under the Industrial Disputes Investigation Act to deal with this dispute as to wages and also as to recognition of the National Catholic Syndicate. They were informed that any increase in wages must be approved by the Regional War Labour Board. A conciliation officer of the Department of Labour arrived and the management agreed to the election of an employees' committee to represent the employees and to submit the wage dispute to the Regional War Labour Board, both parties to accept the decision. Work was resumed on August 19.

Steel Factory Workers, Longue Pointe, P.Q.—A number of employees, members of the United Steel Workers of America, ceased work on August 7, following the refusal of the management to negotiate an agreement with the union. The union had applied for a Board under the Industrial Disputes Investigation Act on July 15. Following a strike on July 24 a vote of the employees had been taken by the Department of Labour as to whether the employees wished to be represented by the steel workers' union or by the employees' association. The vote showed that 979 were in favour of the union and 756 in favour of the association, out of a total of 1,922 eligible to vote, excluding moulders, etc., there being an agreement between the Company and the moulders' union. The management offered to sign agreements with each organization or a joint agreement with both, but the steel workers' union refused. Conciliation by a representative of the Department of Labour did not result in a settlement. An Industrial Disputes Inquiry Commissioner did not succeed in bringing about a settlement and recommended that a Board should be established under the Industrial Disputes Investigation Act. A Board was established August 6 but a number of employees ceased work on August 7. The constitution of the Board was accordingly not proceeded with until the union called off the strike on August 20. A Chairman was then appointed. The employing company replaced many of those on strike and claimed that production in the plant was practically normal.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to August, 1942				
MINING—				
Coal miners, Sydney Mines, N.S.	1	900	900	Commenced July 30, 1942; for changes to increase earnings of borers; terminated August 1; return of workers pending reference to Adjustment Board; in favour of workers.
MANUFACTURING—				
Metal Products—				
Carpenters, Sydney, N.S.	1	50	100	Commenced July 28, 1942; for increased wages; terminated August 3; conciliation (federal) and reference to Regional War Board; in favour of employer.
Foundry labourers, Trenton, N.S.	1	50	50	Commenced July 30, 1942; against dismissal of worker; terminated August 1; negotiations; in favour of employer.
Bolt factory workers, Owen Sound, Ont.	1	60	240	Commenced July 30, 1942; for increased wages; terminated August 5; conciliation (federal); reference to Regional War Labour Board; indefinite.
Machinists, Winnipeg, Man.	1	50	100	Commenced July 31, 1942; alleged lockout *re* union recognition and changes in working conditions; terminated August 3; conciliation (federal); compromise.
CONSTRUCTION—				
Shipbuilding—				
Welders, Vancouver, B.C.	1	200	800	Commenced June 12; in protest against closed shop agreement and dismissals on June 4; terminated August 5; conciliation (federal); in favour of employer.
(b) Strikes and Lockouts Commencing During August, 1942				
MINING—				
Coal miners, Aerial, Alta.	1	146	1,000	Commenced August 6; for adjustments in wages and working conditions; terminated August 13; negotiations; compromise.
Coal miners, Inverness, N.S.	2	280	5,000	Commenced August 8; *re* underground transportation of miners; terminated August 31; investigation (provincial); indefinite.
Coal miners, Blairmore, Coleman and Bellevue, Alta.	4	2,014	2,014	Commenced August 10; for men's pay for boys at men's work; terminated August 10; work resumed pending negotiations and possible reference to National War Labour Board; indefinite.
Coal miners, Nanaimo and Cumberland, B.C.	1	1,300	2,600	Commenced August 16; for revision of wage scale in agreement; terminated August 18; conciliation (federal); return of workers pending reference to National War Labour Board; indefinite.
Coal pier loaders, Union Bay, B.C.	1	*(a)* 30	200	Commenced August 17; for increased wages; terminated August 22; conciliation (federal); return of workers pending reference to National War Labour Board; indefinite.
Coal miners, Sydney Mines, N.S.	1	900	3,600	Commenced August 18; *re* deductions from earnings of two men; terminated August 22; return of workers pending negotiations; indefinite.
Coal miners, Florence, N.S.	1	600	600	Commenced August 18; misunderstanding *re* absenteeism; terminated August 18; negotiations; in favour of workers.
Coal miners, Canmore, Alta.	1	242	1,400	Commenced August 21; for dismissal of fire boss; terminated August 27; conciliation (federal); compromise; (fire boss transferred).

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for the annual review.

† In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 115 indirectly. *(b)* 112 indirectly. *(c)* 40 indirectly. *(d)* 560 indirectly. *(e)* 1,000 indirectly. *(f)* 200 indirectly. *(g)* 800 indirectly.

FOUNDRY WORKERS, HULL, P.Q.—A number of employees in one foundry ceased work on August 31 in protest against the dismissal of three workers, alleged to be for union activity, and for an increase in wages. As a result of conciliation by an officer of the Department of Labour work was resumed for the last shift on September 1 and for the other shifts the next day. The employer agreed to join in an application to the Regional War Labour Board for a wage increase of five cents per hour.

SHIPYARD WORKERS, SAINT JOHN, N.B.—A number of employees, members of a new independent union of Shipyard Workers, Local No. 1, ceased work on August 6 in protest against the appointment of a member of the Canadian Steel Workers' Union No. 2 as a rivet tester. A representative of the Department of Labour reached Saint John on August 7 and informed those on strike that their grievance could not be dealt with while they were on strike and work was resumed next morning. It was then arranged that representatives of the two unions would meet on August 13 with a view to amalgamation but these negotiations were not successful. The employer has had agreements for some time with the Canadian Steel Workers' Union, Local No. 2, and with the Canadian Drydock Union, Local No. 1, both affiliated with the Canadian Congress of Labour, as well as with several craft unions affiliated with the Trades and Labour Council.

LUMBER YARD LABOURERS, CHARLOTTETOWN, P.E.I.—Employees ceased work at noon on August 31 to obtain a cost-of-living bonus and when this was refused sought work elsewhere. The employer replaced those on strike by September 3, and took up the wage case with the Regional War Labour Board.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1941." The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the Labour Gazette, August, 1940, page 760.

The number of disputes beginning in June was 135, and 21 were still in progress from the previous month, making a total of 156 disputes in progress during the month; 112,200 workers were involved in the disputes in progress during the month and the time loss was 356,000 working days.

Of the 135 disputes beginning in June, 45 arose out of demands for increased wages and 46 over other wage questions; 2 over working hours; 17 over questions as to the employment of particular classes or persons; 22 over other questions as to working arrangements; and 3 were sympathetic strikes. Final settlements were reached in 127 disputes, of which 18 were settled in favour of workers, 87 in favour of employers and 22 resulted in compromises; in 24 other disputes, work was resumed pending negotiations.

With reference to the coal mining strikes which were noted in the Labour Gazette, for June and July, official statistics now show the following to be the largest: In Lancashire, 1,400 coal miners were directly and 13,600 indirectly involved in a dispute from May 20 to June 6; this was over haulage workers' dissatisfaction with wages, and work was resumed pending national negotiations. In South Wales, 8,500 miners were on strike from May 27 to June 6 over demands by colliery boys and youths for increased wages; work here was also resumed pending national negotiations. In Cumberland, 4,367 miners went on strike from June 1 to June 23, in protest against an arbitration award rejecting a claim for an increase in wages; work was resumed and the award accepted. Another dispute in Lancashire, which involved 1,300 workers directly and 11,700 indirectly, began June 12, also over haulage workers' dissatisfaction with wages and with the alleged delay in announcing the terms of the national award on miners' wages; the dispute ended June 23, and work was resumed. In South Wales, 2,750 miners were on strike June 15 to June 29 due to dissatisfaction with wages and the amount of the proposed increase to youths under terms of the national award; work was resumed. A summary of the first report of the board of investigation appointed by the Minister of Labour and National Service is given on page 999 of this issue.

About 2,000 fitters, turners and general engineering operatives in Cheshire were on strike from May 28 to June 8, demanding the dismissal of an assistant foreman. Work was resumed and a committee of inquiry later rejected the demand.

Irish Free State

The number of disputes which began during the year 1941, was 71. In all disputes in progress during the year 4,895 workers were involved. The total time loss for the year was 77,133 man working days.

Australia

During the latter part of June and up to July 20, a number of coal mining strikes took place. These were reported for the most part to have involved particular mines and were not authorized by the Miners' Federation and little information is available as to their causes or duration. On various dates the number of coal miners idle through strikes was reported to be from 1,500 to 3,000. Following a conference between the premier, other government ministers and the Miners' Federation, federal regulations were issued about July 23, making it illegal for any miner to advocate or participate in any strike not authorized by his district executive. The unions also were reported to be imposing additional penalties of suspension or expulsion on miners attempting to cause strikes.

United States

The number of strikes beginning in July was 400, involving 87,500 workers in these new strikes. The number of man working days lost in all disputes in progress during the month was 450,000.

A strike of 10,000 interurban truck drivers in the middle western states began August 21 over a wage dispute. The National War Labor Board on August 24 strongly advised that work be resumed immediately pending final settlement. No further report on this strike has been noted.

WARTIME CONTROL OF EMPLOYMENT IN CANADA

National Selective Service Regulations—Establishment of Labour Priorities—Registration of Women

NATIONAL Selective Service became a more vital instrument in the mobilization of Canadian man-power for total war on September 1 when Order in Council 7595 became effective. The new order, embodying "National Selective Service Regulations, 1942", extended and clarified the man-power control principles adopted by the Government last March. (LABOUR GAZETTE, April 1942, page 402; March 1942, page 253 and June 1942, pp. 675-77). It provided a concise formula for the control of employment so that the urgent needs of Canadian war industry could be met efficiently.

"The government's policy is that every man and woman capable of performing some form of war service should undertake the service for which he or she may be best qualified and which the demands of war require," said the Prime Minister, Rt. Hon. W. L. Mackenzie King, in a broadcast address two weeks before the new order was announced. "The government's policy is a positive, not a negative policy. It will be administered without fear or favour and without regard for race, or creed, or class. It must be recognized that the security of each individual is bound up in the security of the nation as a whole."

The mobilization of man-power—including woman-power—required first "that the services of all persons not needed to maintain the health and efficiency of the people should be employed directly for war purposes" and second "that the services of the persons who are thus mobilized shall be employed in the most useful manner," the Prime Minister said. He described "useful manner" as covering service in the armed forces, the making of arms for Canada's own fighting men, the making of arms for Canada's partners in the war, the production of food and clothing and shelter for the fighting men and civilians of the United Nations, and the continuance of essential civilian services such as health, education, transportation, police and fire protection.

"The main responsibility for administering wartime man-power policy rests with the Director of National Selective Service, Mr. Elliott Little," the Prime Minister said. "He is responsible to the Minister of Labour. . .

"The enlistment of men for the navy, air force and active army will continue to be carried on directly by the three defence departments," he continued. "For the immediate present, the conscription of men for military service in Canada will remain the responsibility of the Department of National War Services. It is planned in the near future to transfer the task of calling up men for military service to the director of National Selective Service. In anticipation of this transfer, there will be close co-ordination between the Department of National War Services and the National Selective Service administration. This will serve to avoid undue dislocation of war industry resulting from the calling of men for military service.

"In the exercise of its immense powers over the services of men and women, it is realized that the National Selective Service administration may make decisions which, if needless hardship is to be avoided, will require revision. The National War Services Boards will accordingly be retained to hear appeals from decisions of selective service officers."

Mr. King defined the government's policy on compulsion as follows: "The purposes of National Selective Service is, as I have said, to control and direct the services of men and women in the manner which will best serve the national interest at a time of war. The control and direction need not be wholly compulsory. In itself compulsion has little or no merit. To the many who are willing to serve, there is no need for the employment of compulsion. Compulsion is necessary, however, to obtain service from those who otherwise would not be willing to serve. The application of compulsion requires the services of men to administer and enforce it. Unnecessary compulsion is a waste of time, labour and money. Voluntary methods, where they are satisfactory, represent an immense saving of what is commonly called 'red-tape.' In times of peace compulsion may readily be kept at a minimum; in times of war, however, its use becomes increasingly essential to an all-out effort.

"Compulsory service, in other words conscription, for the whole of Canada, over the whole of Canada, has been a part of the law of the land since 1940. This has been frequently forgotten, if not at times intentionally overlooked."

Basic Requirements of Employment Control

Against that background of government policy, the new regulations became effective. They were announced in a joint statement by Hon. Humphrey Mitchell, minister of labour, and Mr. Little, which read in part as follows:

"Several basic requirements are ordered by the regulations:

"The first is that henceforth no employer may dismiss any worker and no worker may quit any job without giving seven days' notice in writing of that intention.

"The second is that no person may seek employment and no employer may hire, or interview with intention to hire, any person, man or woman, unless the person has a permit to seek employment.

"From the above two orders certain exceptions have been made for such types of employment as private duty nursing, teaching, etc.

"Third, and without any exception, any person capable of working will not be permitted to remain voluntarily unemployed, and any person not working full time for a period of two weeks or more can be ordered to take full-time suitable work.

"Fourth, all employers must report to Employment and Selective Service offices their future labour needs and must fill their current needs through the same offices.

"To clarify this, the procedure will be that an employer must give a worker a notice of separation when the worker leaves his employment. This notice must be presented by the worker at the Employment and Selective Service office where the worker will receive a permit to seek work. This permit may, based upon labour needs in that locality, restrict the worker to seek employment in a given locality, industry, occupation or establishment. Without a permit, no person may seek work or be hired.

"To make effective the regulations covering changes of employment, it is necessary to exercise certain control over 'Help Wanted' and 'Situations Wanted' advertising, and over employment agents who seek out workers from other plants and enterprises. Tribute should be paid to the Press for its co-operation in expressing its willingness to help make this control fully effective.

Labour Priority Schedule Established

"To direct workers to the right jobs, and to determine the allocation of future demands for man-power, a priority schedule has been established in collaboration with the Department of Munitions and Supply and the Wartime Prices and Trade Board. Each Employment Office manager, who is a Selective Service officer, will have a constantly revised priority schedule based upon local industrial and man-power conditions but conforming with a national priority plan. This priority schedule will be the directive upon which he will base his decisions in the allocating of man-power. This schedule will not be made public, inasmuch as it will change at any time with the changing essentiality of production under the direction of a permanent committee of the three departments. For instance, the essentiality has changed from butter yesterday to guns today, and may change from aircraft today to tank treads or something else tomorrow.

Transfer to Essential Work

"Beyond the previously outlined regulations, a Selective Service officer will have authority to summon anyone, without exceptions, for interview. He may point out more essential work than that which the person may be doing. But please understand this: Unemployed persons (persons who have remained unemployed for more than a week) and persons who have been working less than full time for two weeks may be ordered to take work and not leave it without permission, whereas persons who are asked to transfer to equally essential or more essential work will be invited to take that work. This indicates the belief that Canadians are anxious and willing to work where they can serve best. Through a Selective Service officer, the Government will pay reasonable travelling expenses and will compensate, within limits, for extra living expenses if the worker is persuaded by a Selective Service officer to transfer to work remote from his home. A small supplementary allowance may also be allowed if a worker is transferred to a job which involves a decrease in earnings. Reinstatement in former employment, previously granted members of the armed forces, applies to workers persuaded to transfer their jobs.

"The orders, as previously outlined, are divided into two groups. One group covers every person in Canada with no exception and provides for interview by a Selective Service officer, compulsory work by persons who remain unemployed and are employable, and compulsory transfer to full time work by persons not working full time. The second group is that which calls for seven days' notice in changes of employment and for employment only after a permit to seek employment has been obtained. From this latter group certain occupations have been excepted and they are listed in detail in a copy of the Explanations of the Regulations attached to this statement.

Farm Workers

"A still further set of regulations covers a third body of workers. These are persons engaged in farm work. While previous regulations provided that farm workers must remain on the farm, and the new regulations maintain that basic status, the new regulations further

provide that farm workers can leave the farm for off-season work as follows: To engage in fishing, hunting or trapping for indefinite periods, or to take any sort of work for periods not exceeding 30 days without a permit if such work does not interfere with farm production. They further provide work may be taken off the farm for more than 30 days, such as during the winter season, but only after obtaining a permit from a Selective Service officer. Permits will be granted for the asking if the Selective Service officer is satisfied that farm production will not be interrupted. It is most important that the farmer should understand that the great shortage of man-power at the present time makes it his duty to take off-season work under the above conditions, and farmers are urged to take such work.

"In this respect, a farm worker retains his status as an agricultural worker although working under these conditions and retains his right to indefinite postponement of military service.

"The increasing control over labour involves the acceptance of greater responsibilities by employers as well as employees. It is important now that every employer realize that he must notify his local Employment and Selective Service office of his labour needs as fast as they are anticipated. It is only through these offices that an employer may legally obtain workers. This involves a far greater use of the offices than has been the custom of employers in the past few months. We might state here that National Selective Service has been disappointed by the disregard of previous requests that employers notify the offices of their labour needs. Substantial increases in staff and in the number of offices have been made to facilitate the allocation of labour, and from now on no excuse will be accepted from employers for any disregard of the order that they obtain all employees through these offices.

Other Measures to Increase Labour Supply

"As the supply of labour decreases, employers must be prepared to make greater use of women, to use their labour more efficiently and to expect curtailment of certain least essential lines of industry. In whatever National Selective Service does, it hopes to act with the co-operation of both employers and labour since the problems industry will face must be worked out jointly. This means that employer-employee committees must be formed both to aid in solving the problem and to understand and explain to labour why certain things must be done. In addition, industrial advisory committees to study curtailment of some industries must be created, with representation of both management and labour on them, to advise upon the changes which will be created by the withdrawal of man-power to more essential work.

"In planning the best use of our available man-power, much information will be required. When employers receive requests for information they should bear in mind that it is required to provide them with the men and women they need. They will shortly be asked to file returns giving the numbers of their employees and broad occupational groups, and from time to time may be requested to provide other information."

Text of P.C. 7595

Following is the Order in Council:

ORDER IN COUNCIL

[7595]

AT THE GOVERNMENT HOUSE AT OTTAWA

WEDNESDAY, the 26th day of August, 1942.

PRESENT:

HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL

Whereas the Minister of Labour reports that it is essential for the most effective use of labour in the war effort to establish more extensive controls over employment and that it would lead to better understanding of the new controls if the Orders in Council relating to such matters now in force were revoked and a comprehensive set of new regulations issued:

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, is pleased to revoke and doth hereby revoke, effective on the first day of September, the following Orders in Council: P.C. 6286 of 7th November, 1940, as amended, P.C. 10/6172 of 13th August, 1941, P.C. 2251 of 21st March, 1942, P.C. 5038 of 12th June, 1942 (and the Order of 16th June, 1942, issued pursuant thereto), and P.C. 5152 of 18th June, 1942;

His Excellency in Council on the same recommendation, concurred in by the National Selective Service Advisory Board, and under the authority of the War Measures Act, Chapter 206 of the Revised Statutes of Canada, 1927, and the National Resources Mobilization Act, Chapter 13 of the Statutes of Canada, 1940. is pleased to make the following regulations and they are hereby made and established accordingly:

REGULATIONS

1. These regulations may be cited as the National Selective Service Regulations, 1942.

PART I

Interpretation

2. As used in these regulations, unless the context otherwise requires.

(*a*) "Administrative Division" means an administrative territorial division established under the National War Services Regulations, 1940 (Recruits);

(*b*) "agriculture" means the production on a farm of field crops, fruits, vegetables,

honey, poultry, eggs, livestock, milk, butter or cheese;

(*e*) "Appeal Board" means, in respect of any person, the National War Services Board established under the National War Services Regulations, 1940 (Recruits) for the Administrative Division or part thereof in which such person resides, or such other agency as the Governor in Council may prescribe.

(*d*) "Director" means the Director of National Selective Service.

(*e*) "Divisional Registrar" means, for any Administrative Division, the Registrar appointed for such Division under The National War Services Regulations, 1940 (Recruits);

(*f*) "employee" includes any person who is employed under a contract of service or apprenticeship, written or oral, expressed or implied, and any person or group or class of persons declared by the Director to be employees for the purposes of these regulations, whether or not such persons are employed under a contract of service, but shall not include—

(1) any person employed by His Majesty in right of any province;

(2) any person employed in agriculture or fishing or hunting or trapping;

(3) any person subject to the provisions of the Essential Work (Scientific and Technical Personnel) Regulations, 1942;

(4) any person employed as minister, priest or clergyman authorized to perform the marriage ceremony;

(5) any person employed as a registered nurse or as a probationer undergoing training for such employment;

(6) any person employed as a teacher in a school, college or university which, in the opinion of the Director, is not carried on for purpose of gain;

(7) any female person employed in domestic service in a private home where not more than one servant is employed;

(8) any student employed for work to be done after attendance at day classes or on holidays during the school or college term but not during the long summer vacation;

(9) any person in respect of part-time, subsidiary employment which is not his principal means of livelihood;

(10) casual or irregular employment for not more than three days in any calendar week for the same employer.

(*g*) "employer" means any person, including any officer or agent thereof and including His Majesty in right of the Dominion of Canada, having one or more persons in his employ;

(*h*) "fishing" means the art or practice of catching fish for commercial sale by any method other than steam or diesel trawlers or draggers, but shall not include any processing of fish on shore;

(*i*) "local office" means in respect of any person the nearest Employment and Selective Service Office (formerly an Employment and Claims Office of the Unemployment Insurance Commission) or any other agency designated by the Director as a local office for the purposes of these regulations; Provided that any agency designated as a local office pursuant to the Control of Employment Regulations, 1942, shall, unless the Director otherwise decides, continue to be a local office for the purposes of these regulations;

(*j*) "Minister" means the Minister of Labour;

(*k*) "National Selective Service Officer" means in respect of any person the official appointed as such by the Director for the area in which such person resides or is employed;

(*l*) "person wholly or mainly employed or engaged in agriculture" means any person who, on the 23rd day of March, 1942, was wholly or mainly employed or engaged in agriculture and includes any person who, on the said 23rd day of March, 1942, was employed or engaged, but only seasonally, outside agriculture but whose last employment or occupation immediately prior to such seasonal employment or engagement outside agriculture was wholly or mainly in agriculture; Provided that notwithstanding the provision of subsection 3 of section 14 of the National War Services Regulations, 1940 (Recruits), no such person shall be deemed to have ceased to be actually employed or engaged in agriculture solely by reason of his lawful acceptance, subsequent to the 23rd day of March, 1942, of a seasonal employment or engagement outside agriculture during periods when such employment or engagement would not interfere with agricultural production.

3. If the Director finds that any person is an employee such finding shall be final and conclusive and shall not be subject to review in any manner.

Part II

Labour Priorities

4. In consultation with the Department of Munitions and Supply and the Wartime Prices and Trade Board and subject to the approval of the Minister, the Director may classify occupations, industries, firms or establishments, either nationally or in any community, according to the degree of their essentiality for the defence of Canada, for the efficient prosecution of the war and for civilian needs, and shall from time to time amend or revise such classification in consultation with the Department of Munitions and Supply and the Wartime Prices and Trade Board. Such classification shall consist of not less than four classes, viz., very high labour priority, high labour priority, low labour priority and no labour priority, each of which may be further sub-classified as required, and shall constitute a labour priority schedule indicating the priorities according to which, so far as feasible, the demands for labour by industries, firms, or establishments should be filled or permitted to be filled. Such labour priority schedule shall not be published but may be circulated to officers and employees of the Government of Canada whose duties relate to National Selective Service.

Part III

Stabilization of Employment in Agriculture

5. No person wholly or mainly employed or engaged in agriculture shall enter into employment outside agriculture except

(*a*) active service in any of His Majesty's armed forces by voluntary enlistment.

(*b*) compulsory military training or service if under The National War Services Regulations, 1940 (Recruits) it is established to the satisfaction of the National War Services Board concerned that such person is not an essential worker in agriculture, or

(*c*) temporary employment for not more than thirty consecutive days outside agriculture at a time when such employment would not interfere with agricultural production,

unless he has obtained a permit to accept such employment from a National Selective Service Officer; and no employer shall take into any such employment any person wholly or mainly employed or engaged in agriculture unless such person has obtained and presents to him such a permit.

PART IV

Notices of Separation and Permits to Seek Employment

6. (1) No employer shall lay off from employment or terminate the employment of any employee without giving to such employee seven calendar days' notice in writing, exclusive of the day or shift on which such notice is given, unless a shorter period of notice has been approved of by a National Selective Service Officer.

(2) Notwithstanding the provisions of subsection (1) of this section an employer shall not be required to give notice to any employee whose lay-off or termination is occasioned by damage to or destruction of his place of employment by fire, explosion or other catastrophe but the employer shall in such case notify the local office of the persons whose employment has been interrupted or terminated by such cause.

(3) No employee shall quit his employment without giving to his employer seven calendar days' notice in writing, exclusive of the day or shift on which such notice is given, unless a shorter period of notice has been approved by a National Selective Service Officer.

(4) Notwithstanding the provisions of subsection (3) of this section no notice shall be required from employees called for military training or service under the National War Services Regulations, 1940 (Recruits).

7. The notice referred to in section 6 of these regulations shall constitute and shall hereinafter be referred to as "notice of separation".

8. (1) If an employer finds that any employee has been guilty of serious misconduct he may suspend that employee from duty without notice, but shall give such employee a notice of separation and furnish a copy thereof to the nearest local office.

(2) Any employee suspended for serious misconduct may, within seven days after the date of such suspension, exclusive of the day or shift on which such suspension occurred, apply in writing to the National Selective Service Officer for a review of such suspension. The National Selective Service Officer shall investigate the grounds of the suspension and, if he finds that the suspension was warranted or necessary for the maintenance of discipline in the plant or establishment, shall so notify the employer and the employee concerned, and the employee's employment shall be deemed to have terminated as of the date of the suspension. If the National Selective Service Officer finds that the suspension was not warranted, he shall so notify the employer and the employee concerned and the employer shall reinstate the employee with full pay from the date of the employee's application for a review to the date of his reinstatement. If the employee does not apply for a review of the suspension his employment with that employer shall be deemed to have terminated on the date on his suspension.

9. The provisions of these regulations with respect to the giving of seven calendar days' notice shall not supersede any law, statutory or otherwise requiring a longer period of notice.

10. Every employer shall furnish to the nearest local office a copy of every notice of separation given or received by him pursuant to these regulations within forty-eight hours after the giving or receipt of such notice and shall retain one copy in his own files.

11. Subject to the provisions of section 5 (*c*) of these regulations, no employer, or any agent or employee of such employer, (whether or not specifically so authorized by the employer) shall interview any applicant for employment as an employee nor solicit any person to enter his employment as an employee nor offer any person employment as an employee in any manner nor take any person into employment as an employee nor retain any person in his employment as an employee, unless such person present to the employer in duplicate the written permission of a National Selective Service Officer to seek and accept employment.

12. The permission referred to in section 11 of these regulations shall constitute and shall hereinafter be referred to as a "permit to seek employment".

13. When any employer engages an employee he shall forthwith record such information as may be called for on both copies of the permit to seek employment and shall, within forty-eight hours of such engagement, send one copy to the nearest local office, and shall retain the other for his own files.

14. All notices or other forms or communications about Selective Service required to be signed by or on behalf of an employer shall be valid only if signed by an officer above the rank of foreman within the meaning of Order in Council P.C. 5963 of 10th July, 1942.

15. The Director shall make available to employers, and every employer shall furnish on request to any employee, a prescribed form of notice of separation.

16. If for any reason an employer or employee is not able to obtain a prescribed form, he shall not be relieved of his obligation to give notice or furnish information required by these regulations and shall give such notice or furnish such information in the requisite number of copies on any kind of paper of the dimensions of five inches by eight inches.

17. A National Selective Service Officer shall furnish on request to any person who presents a notice of separation a permit to seek employment. Permission so given may be restricted to the seeking of employment in a given community, industry, occupation or establishment.

18. Whenever an employer learns that he requires or will require to engage any additional employees or to lay off any employees, he shall forthwith notify such vacancies or layoffs to the nearest local office.

19. The provisions of sections 11 and 13 of these regulations shall not apply to the re-employment of any employee by an employer—

(*a*) within a period of not more than fourteen consecutive days immediately following the day on which he was last employed by that employer, or

(*b*) immediately following the end of a period of sickness or disability, if his employment with that employer was terminated by reason of such sickness or disability, or

(*c*) on his resumption of work on the termination of any stoppage of work by reason of an industrial dispute, or

(*d*) in accordance with the terms of a collective labour agreement which provides preference in employment and re-employment according to length of service or seniority, or

(*e*) upon such employee's reinstatement pursuant to the provisions of the Reinstatement in Civil Employment Act, 1942, Chapter 31 of the Statutes of Canada, 1942, or pursuant to the provisions of Part VIII of these regulations,

but the employer, within forty-eight hours of any such re-employment, shall furnish to the nearest local office notice of such re-employment.

PART V

Control of Advertising

20. Except as herein otherwise provided, no person shall advertise in any newspaper, magazine or periodical, or by radio, or by letter, circular, notice, poster or placard or by any other medium or in any other manner offering employment as an employee to any person seeking employment as an employee, and no person shall print, publish, utter, or circulate in any manner any such advertisement.

21. Any person may apply to a National Selective Service Officer to arrange for the publication, at such persons's expense, of an advertisement offering employment as an employee or seeking employment as an employee and the National Selective Service Officer shall make such arrangements in connection therewith as he considers necessary and desirable.

PART VI

Compulsory Employment

22. The provisions of this Part shall be applicable in respect of any class of work or employment and in respect of any person whether or not an employee as defined in section 2 of these regulations.

23. (1) A National Selective Service Officer shall have power and authority by order in writing—

(*a*) To direct any person to report for interview at a local office, provided that no person shall be required so to report at any time which would interfere with his work;

(*b*) To direct any person who has been unemployed or not gainfully occupied for more than seven consecutive calendar days forthwith to apply for any available suitable work and to accept any such work offered to him; and

(*c*) Upon not less than seven days' notice, to direct any person who has been employed at less than normal full time for a period of more than two consecutive calendar weeks to apply for any available full-time suitable work of high or very high labour priority and to accept any such work offered to him.

(2) A copy of any order directing any employed person to apply for or to accept other work shall be sent by the National Selective Service Officer to such person's employer.

(3) No work shall be deemed suitable for the purposes of subsection (1) of this section if it is work at wages lower or on conditions less favourable than those observed in the community in which the work is to be performed, by agreement between employers and employees, or failing such agreement, than those recognized by good employers.

(4) In determining within the limitations of subsection (3) of this section whether or not any work is suitable for any person, the National Selective Service Officer shall consider, in addition to such other factors as he deems relevant, the person's physical fitness and prior training, his or her experience and prior earnings, the distance of the available work from his or her residence, and, his or her family and domestic responsibilities.

(5) A National Selective Service Officer shall not direct any person to accept work which necessitates changing his or her place of residence without arranging for the provisions of the financial assistance authorized by section 25 of these regulations.

24. No person who has been directed to accept work pursuant to section 23 of these regulations shall quit such work without the written permission of a National Selective Service Officer.

PART VII

Supplementary Allowances

25. A National Selective Service Officer may arrange for the payment of the cost of the transportation of workers, their dependents and effects on a non-recoverable basis when he deems such payment necessary. Part or all of the following expenses may be paid:

(*a*) Travelling expenses where the worker alone is moved more than one hundred miles.

(*b*) Travelling and moving expenses where it is deemed necessary to move the worker's family.

(*c*) An allowance for meals and incidental expenses while in transit to the new job of not more than three dollars per day.

(*d*) A supplementary living allowance of not more than five dollars per week if the worker is moved away from his family and his earning capacity on the new job is insufficient to offset the increased cost of living due to the separation.

(*e*) A supplementary allowance of not more than five dollars per week if the worker is transferred to a job which involves a decrease in his weekly earnings.

(*f*) A loan of not more than fifteen dollars to defray living expenses during the first week of employment and to be repaid in full out of his first full pay for the regular pay period.

26. Any expenditures pursuant to section 25 of these regulations shall be chargeable to the War Appropriation.

PART VIII

Reinstatement in Employment

27. The provisions of the Reinstatement in Civil Employment Act, 1942, Chapter 31 of

the Statutes of Canada, 1942, shall apply *mutatis mutandis*, with respect to any employed person who is induced, or pursuant to these regulations is directed, by a National Selective Service Officer to accept other employment in which, in the opinion of such officer, he can contribute more effectively to the prosecution of the war; Provided, that notice in writing of such person's intention to accept such other employment is sent by him to the employer by whom he is then employed and with whom he intends to claim reinstatement upon the termination of such other work.

PART IX

Administration

28. By notice in writing addressed to the employer and employee concerned a National Selective Service Officer may at any time revoke any permit given by him and such revocation shall become effective at the expiration of seven calendar days after the date of mailing of such notice.

29. These regulations shall be administered by the Director under the general supervision of the Minister.

30. The Director shall have power and authority:

(*a*) to prescribe the forms for notices of separation, permits to seek employment and any other forms required for the administration of these regulations;

(*b*) to issue instructions prescribing the matters to be considered by National Selective Service Officers in granting, refusing and revoking permits and in making orders, directions and rulings of any kind relating to the administration of these regulations, and prescribing the circumstances under which they shall or shall not grant, refuse or revoke permits and make such orders, directions and rulings;

(*c*) to issue instructions prescribing the conditions which may be imposed by National Selective Service Officers in granting permits or making orders, directions or rulings of any kind relating to the administration of these regulations;

(*d*) to issue instructions prescribing the circumstances in which a National Selective Service Officer shall make arrangements for advertising pursuant to section 21 of these regulations and the terms upon which he may make such arrangements;

(*e*) to issue instructions prescribing the circumstances under which a National Selective Service Officer may arrange for the payment of supplementary allowances pursuant to section 25 of these regulations;

(*f*) subject to the approval of the Minister, to issue orders excluding any person or group or class of persons from the application of any of the provisions of these regulations or qualifying any of the provisions of these regulations in their application to any person or group or class of persons; and

(*g*) subject to the approval of the Minister, to issue orders requiring employers to keep such records and furnish such information as he deems necessary for the effective administration of these regulations.

31. Nothing in these regulations is intended to interfere with or impair the provisions of any collective labour agreement.

PART X

Appeals and Penalties

32. (1) Any person aggrieved by the granting, refusal or revocation of any permit pursuant to these regulations or by any order, direction or ruling made by a National Selective Service Officer, or either of such person's parents, his guardian, his present or prospective employer or a representative of any trade union or similar organization to which he belongs may, within seven days of such granting, refusal, notice of revocation, order, direction or ruling, appeal therefrom by notice in writing to the Divisional Registrar of the Administrative Division in which such person resides and the National War Services Board for such Administrative Division shall forthwith hear and determine such appeal and such decision shall be final and conclusive.

(2) Such of the provisions of the National War Services Regulations, 1940 (Recruits) with reference to National War Services Boards as are not inconsistent with these regulations shall apply *mutatis mutandis* to appeals under this section.

(3) Any person who appears before an Appeal Board shall do so at his own expense.

33. (1) In any prosecution for contravening any provision of these regulations or of any order or direction issued pursuant to these regulations, the burden of proving compliance shall be upon the person charged with the offence.

(2) In any prosecution under these regulations, the complaint shall be made or the information laid within one year from the time when the matter of the complaint or information arose.

34. (1) Any person who contravenes any of the provisions of these regulations or of any order, direction or ruling issued pursuant to these regulations shall be guilty of an offence and liable upon indictment or summary conviction to imprisonment for a term not exceeding twelve months with or without hard labour, or to a fine not exceeding $500, or to both such imprisonment and such fine.

(2) Every one is a party to and guilty of an offence under these regulations who

(*a*) actually commits it;

(*b*) does or omits an act for the purpose of aiding any person to commit the offence;

(*c*) abets any person in commission of the offence; or

(*d*) counsels or procures any person to commit the offence.

(3) If several persons form a common intention to prosecute any unlawful purpose, and to assist each other therein, each of them is a party to every offence under these regulations committed by any one of them in the prosecution of such common purpose, the commission of which offence was, or ought to have been known to be a probable consequence of the prosecution of such common purpose.

(4) Every one who counsels or procures another person to be a party to an offence under these regulations of which that person is afterwards guilty, is a party to that offence, although it may be committed in a way different from that which was counselled or suggested.

(5) Every one who counsels or procures another to be a party to an offence under these regulations is a party to every offence which that other commits in consequence of such counselling or procuring, and which the person counselling or procuring knew, or ought

to have known, to be likely to be committed in consequence of such counselling or procuring.

35. These regulations shall be effective on the first day of September, 1942.

Farmers not "frozen" to Seasonal Work

When the regulations were announced a large number of farmers who had been engaged in post-harvest logging operations immediately flocked home to their farms in fear they would lose their status as farmers. At the time more than 60,000 men were needed to cut pulpwood and timber with the prospect that that number would have to be doubled by Christmas. To further clarify the situation Mr. Little issued another statement to assure the farmers they would not be "frozen" to their jobs.

"I want to make it clear that persons regularly employed in the woods are only required to give seven days' notice before leaving a job," Mr. Little stated. "So far as farmers are concerned, they are encouraged to take off-season employment in the bush as well as other places and should not get the notion that because they are not on the farms they will be frozen to jobs they now are in."

The regulations were perfectly clear, he said. Anyone who was either working on a farm or was ordinarily engaged in farming—though off on some other job—last March 23, was considered a farmer and had certain rights under the new regulations. He was only expected to remain on the farm during seasons when he was needed there—mainly during the sowing season and at harvest time. Otherwise he could take any job and retain his right to indefinite postponement of military service no matter where he was working.

"If he wants to take a job on another farm or go fishing, trapping or hunting, he is at liberty to do so, without permission, at any time that it doesn't interfere with his farm production. He can also work anywhere—anything from a munitions plant to a lumber mill—for a period up to 30 days without getting a permit," Mr. Little said.

"If, however, a farmer finishes his harvest and has several months before having to visit his farm again for sowing, he may obtain a selective service permit to go and work the winter in any occupation. He can have that permit for the asking."

Reason for the apparent relaxation of the strict regulations covering farm workers, Mr. Little explained, was because the serious labour shortage made it necessary to utilize farmers in other industries during periods when farm work was light. During busy farm periods it was necessary for every available farm worker to be on the farms to maintain production of food for the United Nations. But during other periods much labour would be wasted if men were compelled to stay on farms.

Mr. Little said it was hoped the farmers and fishermen and where possible the construction workers off-season would continue to fill the labour needs during the off-season.

To further assist those affected by the new regulations, two publications, "Workers' Handbook" containing the answers to 25 questions common to labour, and "Explanation of National Selective Service Regulations" were issued to employers, trade unions and local employment and selective service offices.

Expansion of Local Employment and Selective Service Offices

While the new regulations were being placed in operation, National Selective Service was moving in other directions along lines previously set. There was a rapid expansion of local employment and selective service offices through the existing machinery of the Unemployment Insurance Commission.

Employer-employee Co-operation

There was development also in phases of employer-employee co-operation which had been emphasized from time to time as vital to good industrial relations and efficient production. A branch of National Selective Service was devoted to industrial relations and, while it was not possible to obtain complete information on the number of plants which had set up employer-employee committees, it was known that the program had been adopted in scores of plants.

Man-power Advisory Committees

A beginning in the establishment of man-power advisory committees-labour-management committees in whole industries—was made in the pulp and paper industry to deal with problems arising out of the dislocation of men caused by curtailment of the industry. With a 40 per cent reduction in pulp and paper output, many problems were raised and labour and management were asked to work together to solve those problems.

Another man-power advisory committee came into being in the hardrock mining industry with the following announcement by Mr. Little:

"We have taken preliminary steps towards setting up a man-power advisory committee in the hardrock mining industry, covering both gold and base metals. The first of such advisory committees is already functioning in the pulp and paper industry and we aim to have this hardrock mining committee operating as soon as possible.

61313—3½

"Through these committees, which are composed half of management and half labour, we are trying to utilize the experience and brains within each industry in arranging the adjustments necessitated by war. In some instances, the adjustment is necessitated by a deliberate curtailment of the industry to release man-power for more essential work, or by a curtailment of materials or by a falling off of normal demand. Whatever the motivating force, we are drawing on the help available within each industry itself in programming necessary readjustments in an orderly fashion.

"With the help of labour and management through these committees, we want to see that there is no unnecessary hardship or injustice worked on industry or the employees within an industry. There is, of course, bound to be some unavoidable hardship.

"In the pulp and paper industry, for example, less hardship may result from partially shutting down each plant than from shutting some down entirely and allowing others to operate fully. The objective should be to slacken down gradually as essential war work is taken to each plant or at least into the immediate vicinity so that no man-hours will be lost and little hardship result.

"In the gold mines, a gradual reduction of operations generally would seem called for but the timing and speed of that reduction will have to be rigidly controlled. As other work becomes available, it will be desirable to divert a substantial percentage of men now engaged in the gold mines. Since these men are experienced hardrock miners and since our production of base metals such as copper needs expansion, it would seem only sensible to divert a certain number of men gradually from gold to base metal mining.

"In an industry the adjustment must be made systematically to minimize waste and hardship and the people most directly to be affected should be consulted and have an opportunity to make suggestions."

Military Pre-classification of Man-power

Faced with the task of calling up men for the army in addition to its initial task of providing man-power for industry, National Selective Service took a constructive step when the decision was made to "pre-classify" men in industry. By giving men of military age their medical examinations before the call-up and then by classifying them as to their essentiality, a lot of dislocations and uncertainties were obviated.

Registration of Women

Meanwhile steps were taken to register Canadian women and an initial registration of all women in the 20-24 age group was started September 14 with the possibility that other groups would be registered later.

With only four exceptions, all women in the 20 to 24 year old group were required to register, whether they are married or single. Those who were not required to register at that time were: (1) women now employed with insurable companies and in possession of Unemployment Insurance Commission registration cards 411 or 413; (2) inmates in institutions; (3) women in the armed forces; and (4) members of religious orders.

The employed group which was required to register included: domestics; teachers, including teachers of dancing and singing, etc.; self-employed women such as proprietors of shops; professional and practical private duty nurses, and student nurses; agents paid by commission or fees; provincial civil servants, and employees of hospitals or charitable institutions who had not already registered.

According to the Maritime Co-operator, Truro, N.S., business done by co-operatives in Nova Scotia during the year 1941 amounted to $3,275,774. This figure represents an increase of $84,471 over the previous year's total.

That priorities should be observed in the employment of women workers in war industry, is the policy of the Women's Bureau of the U.S. Department of Labor. The following recommendations have been issued by the Women's Bureau:

1. First women to be employed should be those with factory experience who have lost their employment because of priorities in materials and plant adjustments to war production.
2. Then, other unemployed women who are registered with the Employment Service seeking work.
3. Next, if necessary, the more than 800,000 girls coming from high schools and colleges.
4. Women caring for their homes, particularly those with small children, should not be asked to go into factories and workshops until it is absolutely necessary. They can be much more helpful to the Nation by staying in the home and taking care of the children. It is recognized that in some cases these women find it necessary to work, and for them some provision must be made.

PRICE CONTROL IN CANADA DURING AUGUST, 1942

Elimination of Non-essential Civilian Work—Consumer Rationing—Price Policy—Exemptions "Squeeze" Adjustments and Subsidies—Simplification and Conservation

THE outstanding development during August was the announcement by the Prime Minister that the government had instructed the Wartime Prices and Trade Board to give effect to the policy of curtailing and eliminating non-essential civilian work, with a view to making manpower available for more necessary purposes.

During the month arrangements for the distribution of ration books, valid for the next six months, were completed. A subsidy to producers of fluid milk was arranged and adjustments of retail milk prices in three large centres were effected. Subsidies on wheat for flour and feed for domestic use were arranged by the Canadian Wheat Board. Price policy during the month also involved a downward revision of beef and lamb prices in accordance with normal seasonal variations, the setting of standard maximum prices for feed grain, eggs, used clothing, fuelwood in certain areas and pulpwood, and one or two "squeeze" adjustments, notably cotton yarn and cloth. There were a few exemptions from the price ceiling, the most important one being newspapers, magazines and periodicals.

The program of simplified practice and conservation of scarce materials was extended during the month to the manufacture and sale of additional household appliances, materials using varnish resins, and various types of containers. A new metal containers administration was established to co-ordinate and handle more efficiently related problems with respect to prices and supply.

W.P.T.B. and the Man-power Program

On August 19, the Prime Minister outlined further important developments in the National Selective Service program, emphasizing the necessity for more effective use of available manpower. "Up to this time," he said, "the shifting of manpower to the armed forces or war production has been the incidental result of cutting down unessential production. The reason for the curtailment has been the need to conserve scarce materials. But the main reason now for a further cutting down of civilian activities is the need to conserve manpower for direct war needs."

In announcing the policy of curtailing and eliminating non-essential activities, Mr. King stated that "the Wartime Prices and Trade Board . . . . has been directed to put this policy into effect by such measures as appear necessary for the purpose. . . . In restricting civilian activity, the Wartime Prices and Trade Board will act in closest collaboration with the Director of National Selective Service, whose duty it will be to direct into the most useful channels the manpower released from non-essential civilian activities". Thus a new chapter in the history of the Board's activities has been opened.

Previously the Board's restrictive orders had been mainly designed with the aim of conserving materials and reducing costs. To-day, because of the growing scarcity of manpower, the saving of labour has become a prime objective in itself and one that is bound to play a major part in Board policy. Large supplies of labour must be released for war jobs and war services, while at the same time sufficient supplies of civilian goods and services must be made available to ensure the health and efficiency of the population.

Consumer Rationing

Coupon rationing of sugar, tea and coffee has been pleaced on a more stable basis with the rationing division of the Wartime Prices and Trade Board fully organized and the distribution of permanent ration books completed. The books, valid for six months, contain five series of coupons; the first to be used for the purchase of sugar, the second for tea and coffee. Although no use has been designated for the other three series they are available for any emergency. Use of the books commenced on September 7.

To facilitate the use of this year's surplus of apples the Board allowed additional supplies of sugar under the purchase voucher system. The allotment is one pound of sugar for eight pounds of apples. The only change with respect to tea and coffee rationing came with the Board's announcement that institutions and public caterers, having been prohibited from making purchases from retailers, would be permitted to return to this practice if it had been their custom.

Beef Supply

To encourage an orderly supply of cattle and beef throughout the year and to maintain cattle prices in proper relationship to maximum wholesale beef prices, the government approved a policy whereby the Wartime Food corporation will be the sole exporter of beef cattle and will, when necessary, buy cattle

in the domestic market to support cattle prices in Canada. In making the announcement the Wartime Prices and Trade Board stated that a general beef shortage across the whole country had developed during August. The shortage appeared toward the middle of August when the quarterly export quota to the United States had become "filled" and farmers, anticipating higher export prices, decided to hold their cattle off the market for sale at United States prices after October 1 when the for export under the United States quota.

The new measures represent a change in policy followed since the end of June of this year under which the Wartime Food Corporation paid the equivalent of export prices in order to divert cattle from the export market to the domestic market up to the number which might otherwise be eligible for export under the United States quota.

The old policy resulted in very uneven marketings of cattle, with abundant supplies in the early part of each quarter and acute shortages in the latter part. The Board's new policy removes any abnormal incentive to hold cattle off the market, and assures not less than ceiling prices to producers.

Price Policy Including Exemptions "Squeeze" Adjustments and Subsidies

Beef.—The third successive reduction in wholesale beef prices was accomplished by an administrator's order (A353, effective August 24 until September 13). The reduction, on the average about one one cent per pound for each cut in each of the fifteen zones across Canada, represents a continuation of the Board's policy of recognizing normal seasonal fluctuations in beef prices. Retailers were allowed one week during which they could sell on the basis of cost plus normal mark-up in order to cover the cost of storing beef purchased before the effective date of the reduction.

Spring and Summer Lamb.—In January of this year, spring and summer lamb (meat derived from lambs born in December, 1941, or winter months of 1942) were temporarily exempted from the ceiling in order to permit normal seasonal price rises. These prices normally reach a maximum in mid-summer, falling again in the autumn. Under the January order, wholesale and retail prices of this type of lamb were again brought under the ceiling on August 16. Maximum prices are those charged by each seller during the basic period, September 15 to October 11, 1941.

Fluid Milk.—Retail price adjustments were made in Halifax and Montreal (an increase of one half cent per quart) and Vancouver (price increased one cent per quart) to be effective September 1. Those in Halifax and Montreal were described as a completion of the reorganization of ceiling prices on fluid milk across the Dominion undertaken in April (Board Order No. 124). The situation in Vancouver was unusual. In the previous order the Board had authorized an increase of one cent per quart but because of dairy competition it had never come into effect. Since it became necessary to ensure increased revenue to producers in order to maintain and increase production, higher minimum prices to producers have been ordered, and the maximum retail price of eleven cents for standard milk has been established as a minimum.

In the larger centres across Canada where the supply of fluid milk indicated a possible shortage, the Board arranged a subsidy to producers of twenty-five cents per hundred pounds of fluid milk. A further increase in returns to the producer was secured by setting specified minimum producers' prices,—an increase averaging ten cents per hundred pounds—in all markets where the subsidy is payable. This adjustment brings a better balance of returns in the dairy industry, following a six cent per pound subsidy on butter fat announced early in July, and a net return of 23 cents per pound established last April for cheddar cheese.

Eggs.—Maximum wholesalers' and retailers' prices for eggs were set by an order, effective August 29. (Board Order No. 178). The order, by setting maximum prices in the eleven main distributing centres, establishes zone differentials in price which are designed to maintain uniformity of supplies in all sections of the Dominion. Freight charges may be added to the maximum established for the distributing centres to obtain wholesalers' maxima for other points. Retailers may add their normal basic period but the mark-up must not exceed 20 per cent of selling price or eight cents a dozen, which ever is lower.

Wheat flour.—Processors using Western wheat for flour or feed will receive a subsidy from the Canadian Wheat Board. Processors of wheat for feed will be paid a drawback of eight cents per bushel. Flour mills producing for domestic use will receive a drawback "representing the difference between the average price estimated to have been paid and the appropriate price on wheat ground for domestic use". The wheat price appropriate to flour ceilings has been fixed tentatively at 77⅜ cents per bushel, No. 1 Northern in store at Fort William. Both drawbacks are payable after August 1.

Feed Grains.—Consistent with the payment of drawbacks on Western wheat, a new order

(A366) governing maximum prices for feed grains has been issued, effective August 31. (It replaces B84 of January 13). Specifically, it provides that the maximum price, f.o.b. seller's point of distribution, at which any person may sell feed grain, shall be the sum of

(*a*) the laid-down cost thereof at his point of distribution (not to exceed, in the case of coarse grains, ceiling prices fixed by the Canadian Wheat Board) less the drawback paid, and

(*b*) his normal mark-up, i.e., the mark-up he used in the basic period.

Biscuits.—Manufacturers of biscuits in Quebec and the three Maritime provinces were allowed to increase their prices by one cent per pound over their prices of the basic period. Wholesalers and retailers were permitted to add the increased cost to their selling prices. It was pointed out that "the biscuit trade in the four eastern provinces was caught with extremely low ceiling prices" and that the order was intended to correct this anomaly.

Used Clothing.—The Administrator of Used Goods on August 17 established maximum prices for specified articles of used clothing free of patches, darns, and holes, having all buttons and other means of fastening, and being of good quality and condition. Dealers in used clothing were required to file with the Administrator of Used Goods lists of three-piece suits and overcoats on hand. Having done this they are allowed to sell listed suits until the end of September and overcoats until the end of December at their basic period prices or at $20, whichever is lower. Thereafter the price specified in the order ($18) must prevail.

Other Price Adjustments.—Maximum prices were established for tin, pulpwood, ordinary and dehydrated alfalfa meal, commercial fertilizers in Eastern Canada, fuelwood in certain areas, and ice sold in the Ottawa district.

A previous Administrator's order (A303, July 21) reducing manufacturers' prices for cotton yarn and cloth in order to enable secondary manufacturers and distributors of textile articles using cotton yarn and cloth to sell at or below ceiling prices was amended with respect to several technical details (A-363 August 27).

Newspapers, Magazines and Periodicals.—All newspapers, magazines and periodicals have been exempted from the ceiling. The "squeeze" has been tightening in this branch of the publishing trade as a result of increasing costs and declining revenues. Since a general measure of value for publications and a general principle for governing permitted price rises were not feasible to devise, and since it was likewise out of the question to deal with each individual case, it was decided to remove the ceiling and permit the industry to work out necessary adjustments. It was considered undesirable to subsidize the industry as that would violate the principle of freedom of the press. It was expected that the keen competition in this field will tend to prevent any excessive price advances.

Lobsters, both canned and fresh, were exempted from the ceiling. All bird feeds made from imported products for use by pleasure birds have also been exempted.

Simplification and Conservation

Fats, Oils and Resins.—The use of shellac has been limited to twenty-four specified purposes by an order of the Oils Administrator (A333, August 13). Another order prohibited the use of natural varnish resins in barn paint, freight car paint or road marking paint, except that in the case of the latter up to one half pound of Batu gum per gallon of solid may be used. Fifty per cent of the stocks of natural varnish resins in the hands of processors as of April 20, 1942, were frozen pending allocation by the Administrator. Processors of *marine animal oils* were required to file statements of production and sale of their products during the month preceding their report, and to obtain permission for all shipments of their product.

Certain Metal Appliances.—Over 400 articles ranging from silos and score boards to paper clips and crochet hooks were added to the list of items for which no steel, copper, or any metal other than gold or silver may be used after the end of September. The order provides that fittings, jointing hardware, reinforcing strips and struts of metal may still be used in the manufacture of any of the banned articles.

A number of orders were passed stipulating specifications to be followed in the manufacture of certain articles. Floor and roof drain fittings, cast iron enamel bath tubs, certain bolts and nuts, hairpins and bobpins, tinplate containers for condensed milk products, closet seats, commercial fertilizers and cotton sewing thread were affected in this manner.

Other orders eliminated products or stipulated that articles be used only for specific purposes. For example, packaging for cartons, metal shafts in sports goods, ceramic products as premiums in merchandising and ladies' "capeline" wool felt hoods were elim-

inated. Raw jute, rotenone, and veneer fruit and vegetable baskets may now only be used for specified purposes. The sale of condensed milk (except to Britain or any British territory, the Red Cross, Departments of Munition and Supply and National Defence, and canteens catering to the forces) is limited to the same amount sold by each manufacturer during corresponding quarters of 1941.

Transformers.—An order of August 28 regulated the types of distribution and power transformers which might be manufactured, stipulating the specifications permitted for each type. The varieties and designs of transformer accessories were also covered in the order. Distribution was brought under control by the stipulation that transformers may only be sold to the department of Munitions and Supply, Transport or National Defence; the R.A.F.; those having contracts with the above agencies; Canadian crown companies; and those having permission of the administrator to receive transformers. The order did not affect maintenance and repair parts.

August 1 Cost of Living Index

The notable rise in the cost of living index which took place during June has been checked, a decline having taken place during July and a further decline being expected during August. The August 1 official cost-of-living index for Canada released by the Dominion Bureau of Statistics showed a decline of two-tenths of one point from the July figure. The index on July 2 stood at 117·9; the August figure is 117·7. The decline is due in the main to lower prices for beef and potatoes, these prices reflecting the normal seasonal decline. They offset slight rises in the prices of eggs, oranges and bananas, sufficiently to reduce the total food index from 130·3 to 129·6. The clothing index rose from 120·0 to 120·1, while the index of home furnishings and services fell one-tenth, from 117·9 to 117·8.

First Aid for Skin Eruptions

The Industrial Accident Prevention Associations report that skin eruptions due to occupation are responsible for 60 to 70 per cent of the total number of cases of occupational diseases. Some of them are of long duration so that the average period of disability for all cases is about ten weeks.

In their memorandum to Ontario industrialists, the Associations list first aid suggestions as given by the Division of Industrial Hygiene, Ontario Department of Health. They are, in part:

1. That workers report at once to the plant dispensary every instance in which a skin eruption or rash occurs.
2. That first aid measures be not applied at the plant dispensary except under the plant physician's direction and where there is no such physician the workmen be referred to a physician at once.
3. That on the advice of the physician every effort be made to remove the patient from exposure to irritating substances used in industrial process, whether the eruption is due to his work or not.
4. That when the physician has given his opinion that the condition is occupational, the case be referred to the Workmen's Compensation Board without delay.

It is pointed out to plant executives that these measures are necessary to assist in determining what skin conditions are due to occupation and particularly to avoid as far as possible the aggravation of these conditions.

Wages Paid Farm Help

Wages paid to male hired help on farms in Canada at August 15 this year were sharply higher than those paid at the same date in 1941, according to a report issued by the Dominion Bureau of Statistics. For the Dominion as a whole the average wages paid for help hired by the day was $2.50 when the employer provided the board as compared with $2.06 in 1941. Rates were highest in British Columbia at $2.95 per day and were above average levels in Ontario and the three Prairie Provinces.

When the men were hired by the month the average wage rate with board was $46.82 on August 15 as compared with $35.64 a year previously. When the workers provided their own board the average rate for men hired by the day was $3.15 compared with $2.54 a year ago and men hired by the month on the same basis were receiving $64.94 compared with $51.01. Many of the correspondents reporting to the Bureau of Statistics emphasize the absolute shortage of farm labourers regardless of wage rates.

In August, there were 11,142 accidents reported to The Workmen's Compensation Board of Ontario. This figure included 28 fatalities. In July there were 12,272 accidents, including 37 fatalities. The awards for compensation and medical aid totalled $879,683.73, of which $154,228.46 was for medical aid in August.

STABILIZATION OF COST OF LIVING, WAGES AND FARM PRICES IN THE UNITED STATES

President Roosevelt Requests Congress to Introduce Economic Control Policy Similar to that in Canada

ON September 7, President Roosevelt sent a message to Congress requesting the adoption of legislation under which the President would be specifically authorized to stabilize the cost of living including the price of farm commodities, and informing the Congress that at the same time that farm prices are stabilized, wages will be stabilized by the President.

In the introduction to his message, President Roosevelt referred to his seven-point national economic policy laid before Congress on April 27, 1942 (LABOUR GAZETTE, May 1942, pp. 571-73).

This policy, the President said, was designed "to stabilize the domestic economy of the United States for the period of the war. The objective of that plan was to prevent any substantial further rise in the cost of living."

Declaring that the prevention of inflation and "a spiraling domestic economy is a vital part of the winning of the war itself," the President reiterated the seven-point program presented to Congress in April as follows:

1. To keep the cost of living from spiraling upward, we must tax heavily, and in that process keep personal and corporate profits at a reasonable rate, the word "reasonable" being defined at a low level.
2. To keep the cost of living from spiraling upward, we must fix ceilings on the prices which consumers, retailers, wholesalers and manufacturers pay for the things they buy; and ceilings on rents for dwellings in all areas affected by war industries.
3. To keep the cost of living from spiraling upward, we must stabilize the remuneration received by individuals for their work.
4. To keep the cost of living from spiraling upward, we must stabilize the prices received by growers for the products of their lands.
5. To keep the cost of living from spiraling upward, we must encourage all citizens to contribute to the cost of winning this war by purchasing War Bonds with their earnings instead of using those earnings to buy articles which are not essential.
6. To keep the cost of living from spiraling upward, we must ration all essential commodities of which there is a scarcity, so that they may be distributed fairly among consumers and not merely in accordance with financial ability to pay high prices for them.
7. To keep the cost of living from spiraling upward, we must discourage credit and instalment buying, and encourage the paying off of debts, mortgages, and other obligations; for this promotes savings, retards excessive buying and adds to the amount available to the creditors for the purchase of War Bonds.

61313—4

The President then outlined the action which had already been taken to put the parts of the seven-point program into effect which did not require Congressional action. He said that price ceilings had been fixed on practically all commodities (other than certain exempted agricultural products) and on rents in war production areas of the United States. This measure of control had proved that the general control of prices was possible "but only if that control is all inclusive" said the President. "If, however, the costs of production, including labour, are left free to rise indiscriminately, or if other major elements in the costs of living are left unregulated, price control becomes impossible. If markets are flooded with purchasing power in excess of available goods, without taking adequate measures to siphon off the excess purchasing power, price control becomes likewise impossible."

Increase in Wages and Salaries

The President then referred to the increase in the amount of annual wage and salary disbursements and that this increase had been rising by more than a billion dollars a month due to increasing employment, overtime and wage rate increases. "It is impossible for the cost of living to be stabilized while farm prices continue to rise," the President said. "You cannot expect the labourer to maintain a fixed wage level if everything he wears and eats begins to go up drastically in price. On the other hand, it is impossible to keep any prices stable—farm prices or other prices —if wage rates, one of the most important elements in the cost of production, continue to increase."

Proposals to Curb Inflation

Outlining his attack on this problem of controlling the cost of living and preventing inflation, the President said:

"Therefore, I ask the Congress to pass legislation under which the President would be specifically authorized to stabilize the cost of living, including the price of all farm commodities. The purpose should be to hold farm prices at parity, or at levels of a recent date, whichever is higher.

"I ask the Congress to take this action by the first of October. Inaction on your part by that date will leave me with an inescapable responsibility to the people of this country to see to it that the war effort is no longer imperilled by threat of economic chaos.

"In the event that the Congress should fail to act, and act adequately, I shall accept the responsibility, and I will act.

"At the same time that farm prices are stabilized, wages can and will be stabilized also. This I will do.

"The President has the powers, under the Constitution and under Congressional Acts, to take measures necessary to avert a disaster which would interfere with the winning of the war.

"I have given the most thoughtful consideration to meeting this issue without further reference to the Congress. I have determined, however, on this vital matter to consult with the Congress."

Farm Prices

Dealing particularly with farm prices, the President recommended that Congress give consideration to the advisability of legislation which would place "a floor" under prices of farm products, "in order to maintain stability in the farm market for a reasonable future time."

"The farmer", the President said, "instead of looking forward to a new collapse in farm prices at the end of the war should be able to look forward with assurance to receiving a fair minimum price for one or two years after the war. Such a national policy could be established by legislation."

The President also stated that whatever necessary action required would be taken to curtail unnecessary buying through instalment purchases. He also forecast that rationing already in effect in some commodities would be extended to others.

Taxation

Dealing with the subject of taxation, the President referred to the taxation program awaiting Congressional action. He said that taxation was "one of the most powerful weapons in our fight to stabilize living costs" as it reduced the competition for consumers' goods, especially scarce goods.

The President said that "in the higher income brackets, the tax rate should be such as to give the practical equivalent of a top limit on an individual's net income after taxes, approximating $25,000. It means that we must recapture through taxation all wartime profits that are not necessary to maintain efficient all-out war production. Such provisions will give assurance that the sacrifices required by war are being equitably shared."

Concluding his message to Congress, President Roosevelt declared:

"Next to military and naval victory, a victory along this economic front is of paramount importance. Without it our war production program will be hindered. Without it we would be allowing our young men, now risking their lives in the air, on land, and on the sea, to return to an economic mess of our own making.

"The least that we at home can do for them is to see that our production increases every day so as to give them the weapons of war with which to fight, and to make sure that our economy at home continues to be one to which they can return with confidence and security."

The I.L.O. in China

A report from the International Labour Office in Montreal tells how the Chinese Branch of the I.L.O. is continuing to carry on its functions. The Chinese Branch formerly had its headquarters in the Shanghai International Settlement. Underground means of communication have described the ransacking by Japanese gendarmes of the Shanghai office shortly after December 7, 1941.

But the China Branch, under its director Cheng Hai-fong, is now established in Chungking. Two small rooms were found in the Chinese capital, which is among the world's most crowded cities. When the "bombing season" opened in April, additional space was rented in a suburb some ten miles from Chungking. The maintenance of two sets of offices by Government and other agencies in Chungking is, according to Mr. Cheng, not only customary but necessary.

Mr. Cheng also describes the inflationary rise in prices which have accompanied the lengthening war in China. "A spring suit of ordinary Chinese material bought in March", according to the I.L.O. report, "cost 1,850 Chinese dollars (approximately $111 in Canadian funds). At the end of April a summer suit cost 2,700 Chinese dollars, and a spring overcoat 4,500 Chinese dollars ($270 in Canadian money)."

The Chungking office is now furnishing the Montreal headquarters of the I.L.O. with regular reports. At the request of the Chinese Government, the Branch is giving its advice and assistance to the Ministry of Social Affairs on the problems of wartime labour control and the formulation of a labour policy.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for August, 1942

AT August 31, 1942, there were 16,328 persons attending classes under the War Emergency Training Program. This was an increase of 648 over the total enrolment as at July 31, 1942.

In recent months those attending R.C.A.F. Classes under the War Emergency Training Program were men enlisted by the R.C.A.F. but granted leave without pay and allowances for the period of their training under the Program. Subsistence allowances were paid to R.C.A.F. trainees by the War Emergency Training Program. On August 15, 1942, the R.C.A.F. placed all these men on full pay and allowances thus putting them on the same basis as the army tradesmen given training under the Program. The navy is adopting a similar policy effective September 5, 1942. The enrolment in R.C.A.F. Classes at the end of August showed an increase of 261 over the enrolment at the end of July, there being 4,938 men in these classes at August 31.

It is being found increasingly difficult to secure a sufficient number of male trainees to fill the pre-employment industrial classes. As a result the full available capacity of many of the Vocational Schools is not being used. With the decrease in the supply of male trainees and the increased need for women in war industry, the training of women for industrial work is being given special attention. The number of women in industrial classes under the War Emergency Training Program is steadily growing and at August 31 there were 1,625 women attending full time pre-employment classes, an increase of 121 over the number of women in training at the end of the previous month. During the month of August, 1,518 new women trainees were enrolled in full time pre-employment classes and 1,280 women from these classes were placed in employment. The number of women placed in employment from full time pre-employment classes since April 1, 1942, is 6,025.

Plant Schools

Up to and including August 31 there were forty plant schools in war industries certificated by the Department. These schools, while operated by the companies concerned, under an arrangement for joint supervision, are receiving the assistance of the directors of training of the War Emergency Training Program in matters of organization and in the preparation of courses of study.

In the Province of Ontario the growth in the number of plant schools has so increased the responsibilities of the Director of Training that it was necessary to engage an assistant.

Distribution of plant schools by provinces is as follows:

Nova Scotia	1
New Brunswick	2
Quebec	1
Ontario	33
Manitoba	3

Plant schools are providing instruction in a wide variety of subjects and trainees are both men and women. At the present time instruction is being given by company instructors in Machine Shop Practice, Fitting and Assembling, Production Machine Operation, Welding, Foundry Practice, Rubber Goods Manufacturing, Radio Specialties, Power Sewing, Aircraft Components (wood), Shipbuilding (Black crews, Plating, Welding, Repairing, Wood Hulls).

The numbers being trained in classes held in approved plant schools as at August 31 are shown in the following table. The totals are also given for part-time industrial classes carried on at centres other than Vocational Schools:

TRAINING IN INDUSTRY

(Subject to revision)

Numbers in Training as at August 31

	Part-time Classes	Plant Schools	Total in Training
Nova Scotia	156	—	156
New Brunswick	—	17	17
Quebec	81	32	113
Ontario	190	726	916
Manitoba	—	46	46

	465	821	1,286

Job Instructor Training

Institutes for Job Instructor Trainers continue to be held to meet the demands for trainers in war industries especially in the Provinces of Ontario and Quebec, where, owing to the number of plants engaged in war production there are a considerable number from whom requests are being received to be included in the program.

To the end of August the number of Institutes that have been held by provinces

and the number of trainers that have graduated is as follows:

Province	Institutes	Trainers
Maritime Provinces	1	8
Quebec	4	45
Ontario	19	151
Prairie Provinces	2	15
British Columbia	2	20
	28	239

A recent interesting development in Job Instructor Training occurred when arrangements were completed to hold two Institutes for the Training Officers of the R.C.N.V.R. These Training Officers will come from eighteen naval divisional points located in as many centres across the country. Following their graduation as Job Instructor Trainers the officers will return to their divisional points and carry the program to the instructors in naval training at each of these points.

Another development of interest is the organization of an institute for trainers in a single plant with a personnel of several thousand. It is the intention of the management to spread the introduction of their J.I.T. through all departments simultaneously in order to cover the organization in the shortest possible time. This is in contrast to the policy of other companies to extend their program over a longer period of time by using the services of a single full-time trainer.

Statistics covering the work of trainers in developing job instructors in their plants (i.e., the men and women engaged in passing on their knowledge and skill to new workers or teaching older workers to do new jobs) are still not available in final form but from incomplete returns received at least 4,000 persons in war industries to date have received instruction from the trainers and possess certificates by which they are recognized as War Production Job Instructors, pledged to apply the principles of good job instruction in their daily work.

Employees' Suggestion Systems in the United States

To encourage suggestions from employees and to insure that each idea for improved production be handled efficiently, the War Production Board in the United States has urged that labour management production drive committees be formed in every plant.

Figures released by W.P.B. indicate that by April 30 such committees had been formed in 599 companies. By June 30 the number had increased to 960, and by August 31 to 1,323 companies with over three million workers.

In the September issue of *Management Record,* published by the National Industrial Conference Board, Inc., 247 Park Avenue, New York, appears an article outlining plans of procedure for establishing an employee suggestion system.

"Even under the stimulus of war production", it is declared in the article, "a suggestion program may fail to achieve the wholehearted co-operation that is desired". Five major subjects are listed, concerning which decisions on policy need to be made. (1) Identifying the suggester; (2) Handling rejections; (3) Formation of the suggestion committee; (4) Determination of suggestion awards; (5) Special recognition for valuable suggestions.

Many companies believe that the suggester's identity should be withheld from those who appraise the suggestion and determine the award. In some companies duplicate numbers on the suggestion blank and detachable stub provide the only means of identifying the suggester. When final action has been taken, the suggester's identification number appears on the bulletin board.

Of 130 companies giving information on their policy regarding identification of the suggester, forty-eight companies, or nearly 37 per cent, reported that the suggester's identity is a complete secret until after adoption of the suggestion, while the remainder reported varying degrees of identification.

The article declares that one of the most frequent reasons why employee suggestion systems are discontinued is the failure to solve the problem of handling rejections, which should be done in such a manner that the unsuccessful suggesters will not lose interest in the possibility of eventually becoming award winners.

In a great majority of employee suggestion schemes, according to the article, the major incentive for obtaining constructive ideas for improvement of product, working conditions or manufacturing efficiency is a cash award. Some companies pay a nominal sum such as five or ten dollars shortly after adoption of the suggestion and make a further award after the value of the idea has been tested in actual practice.

"Successful suggestion system administrators", the article continues, "are aware that there is more to an award than the mere payment of a certain sum of money." Special recognition may take the form of presentation ceremonies, house-organ publicity, annual, grand prizes, certificates of merit, and bonuses for those who produce more than one acceptable idea.

In addition to company awards, Certificates of Individual Production Merit are being issued from War Production Drive headquarters to workers whose suggestions are forwarded by plant labour-management committees to Washington and found deserving. A certain few suggestions receive special citations from Donald M. Nelson, Chairman of the War Production Board. These citations are issued for ideas that make an outstanding contribution to the entire war effort.

ANNUAL CONVENTION OF THE TRADES AND LABOUR CONGRESS OF CANADA

Resolutions Urging Greater Labour-Management-Government Co-operation in War Effort and Labour Representation on Government Bodies —Rejection of Labour Political Action

THE Fifty-eighth Annual Convention of the Trades and Labour Congress of Canada was held in Winnipeg, Manitoba, August 24 to 28, 1942. Credentials were received from 383 delegates which included 269 delegates representing local unions, 52 delegates representing international and national unions, 4 delegates representing federations of labour, 42 delegate representing trades and labour councils, 15 delegates representing divisions of railroad and commercial telegraphers and provincial associations, and one fraternal delegate representing the American Federation of Labour. A letter had been received from Sir Walter Citrine, Secretary of the British Trades Union Congress, expressing regret that it had not been possible, this year, to send a delegate from Great Britain.

Mr. Donovan Swailes, President of the Winnipeg and District Trades and Labour Council, welcomed the delegates on behalf of the affiliated membership of Greater Winnipeg. He referred to the magnificent effort which British labour was making toward winning the war, and attributed much of this to the trust and confidence which the British Government had placed in labour.

The Lieutenant-Governor of Manitoba, the Honourable R. F. McWilliams, in adressing the delegates paid a tribute to Mr. Tom Moore, President of the Trades and Labour Congress, and urged all those who were not actively engaged in fighting the war and in war production to make a national effort by preparing now to plan for post-war work.

Premier Bracken of Manitoba joined in the tribute to President Moore, and complimented Canadian labour on "the miracle of production" which had been accomplished while this nation was turning from a peace economy to an all-out war economy. He, too, urged the necessity of preparing now for the difficult post-war conditions that inevitably lie ahead.

In welcoming the delegates on behalf of the City of Winnipeg, Mayor John Queen, while acknowledging that much had been done in the way of war production, declared that much more could have been done, and criticized the Government for "ignoring labour movements which had been only too anxious to do their part in bringing about increased production." He criticized the Government also for "putting the control of war production too much in the hands of dollar-a-year men". He commended the housing program, but urged that the nation must not wait until the war was over before starting to build a better world. He would like to see a start made by increasing old age pensions above the present rate of twenty dollars a month.

The Honourable Humphrey Mitchell, Minister of Labour, brought to the Convention the best wishes of the Federal Government. In expressing regret at the absence of President Tom Moore, he stated that Mr. Moore had risked his health in making one of the greatest contributions that any single man had ever made to this country. In reply to the popular criticism of dollar-a-year men he pointed out that Mr. E. M. Little, Director of National Selective Service, had been appointed because "he has been a good employer and has had a closed shop agreement with one of your unions. He has made a contribution to Canada despite the fact that he is an employer". The Minister referred to the constructive policies of the Congress, and asserted that "any social advance in the interest of the workers had been borne in resolutions passed by this body".

As guest speaker at the annual banquet later in the day, Mr. Mitchell declared that charges that the Dominion Government was not co-operating with labour were without foundation. It was following the lead of Ernest Bevin in Great Britain in its efforts to effect total mobilization of labour in industry. In its wage-stabilizing policy the Government was merely trying to beat down inflationary tendencies of the time. Some success was evidenced by the fact that during the same period in the last war the cost of living had increased eight times as much as in the present war. The net result was that to-day the purchasing power of the dollar was greater than it would otherwise have been, and to this extent it protected classes of people unable to defend themselves against inflationary tendencies. One of the evil effects of inflation was to make pensions and trade union funds almost valueless.

After taking over the chair Vice-President P. Bengough read a statement from President Moore in which the latter stressed it as the first duty of organized labour to maintain war production, and after that, to play a

proper part in the work of rehabilitation after the war. Mr. Bengough criticized the Government for its "restrictive labour legislation", and for its failure to appoint representatives or organized labour to many important boards. He claimed that big industrialists had too much to say in the running of war production. We could defeat Hitler without adopting his labour policies. But, while labour was justified in its resentment against many orders in council, he admonished his hearers not to let that resentment interfere with the war effort. "To strike", he said, "is to strike against ourselves and our fellow workers in allied countries. Labour in Canada must not strike."

Report of Executive Council

The Executive Council reported that in order to hasten the day of victory "it has sometimes been necessary for those who toil to sacrifice many of their hard-won rights and privileges, and the Executive has continued to fight against exploitation of the workers' rights in the name of patriotism." The Congress had freely offered and stood ready at all times to co-operate with the Government in establishing better relations between employers and employees, to secure uninterrupted supplies of war materials and home requirements. At the same time, the Congress had remained loyal to its unions and the broad principles upon which they were based. The Executive had continued to press the Government for a constructive post-war plan which would assure men and women being demobilized from the armed forces and the many thousands of workers now engaged in war plants of a decent standard of living after the war ends.

It was pointed out that many past mistakes could have been avoided had labour's request for recognition as an equal partner in industry been more generally accepted. It was true that in some instances labour had been accorded representation, notably in Wartime Housing Limited and Toronto Shipbuilding Company, Limited. Appreciation was expressed for the provision for labour representation both in the Unemployment Insurance Commission and the advisory committees attached thereto; also for equal representation with employers on the National and Regional War Labour Boards administering Order in Council P.C. 8253, though in connection with the wage-pegging order in council labour had accepted this responsibility while "of the firm opinion that this particular measure was socially and economically unsound."

Profiteering in production of war materials, the Executive continued, could best be prevented when these materials were made in Government-owned and Government-controlled-plants, and gratification was expressed "at the large extent to which this policy had been adopted by the Government", but labour ought not to be denied representation on directorates charged with the administration of such Government-controlled companies, and the terms of Order in Council P.C. 2685 should be observed.

The Government was commended for widening the powers of the Wartime Prices and Trade Board; it was claimed that rigid adherence to the order in council might create conditions more serious than failure completely to prevent inflation. Strong objection was taken to the claim that reasonable increase in wages would invariably result in inflation.

The report contained a summary of the legislative policies presented by Congress to the Dominion Government, together with a review of labour matters dealt with by Parliament during the 1941-42 session. Wartime orders in council of special interest to labour were also given in summarized form. Other matters dealt with in the report were: Defence of Canada Regulations; National Selective Service; wage control; labour representation on Government boards and committees; re-establishment in civil employment; post-war reconstruction; old age pensions; housing.

National Selective Service

Mr. Elliott M. Little, Director of National Selective Service, in an address on "Labour Responsibilities in Wartime" specially prepared for delivery to the Congress, justified the new selective service regulations by pointing out that more than 250,000 persons were needed in war industries and the armed forces before the end of 1942, and that—with less than 60,000 employable unemployed in Canada—the Nation now faced drastic curtailment of many of the less essential industries and occupations. Selective service was, therefore, about to make demands upon both employer and employee "which neither of us would have tolerated a year ago." He added, that so far as possible "the employee or his representatives will be asked for help and advice in planning the details of the necessary dislocation."

The problem of obtaining the 250,000 persons needed, said Mr. Little, would be met in three ways: (1) By more extensive use of women in essential services and production; (2) By the curtailment of less essential industries and ocupations so that workers may be released for more essential work; (3) By

improvement in the efficiency of those already employed in essential industries. This program, he added, could not succeed without the active support of organized workers. Himself an employer, he advised his fellow employers that if they wished to improve the efficiency of their plants they should improve their relations with their employees by setting up joint committees, and by sharing more of the heavy responsibility with their workers. "Many employers" he said, "may not fully realize that there is nothing better than a trade union properly lead, but they think there are few things worse than a trade union poorly lead." A question period followed Mr. Little's address, during which he answered a large number of leading questions. Printed copies of the address were later distributed to the delegates.

Address of Fraternal Delegate and I.L.O. Representative

Mr. Thomas Lyons, President of the New York State Federation of Labour and fraternal delegate from the American Federation of Labor, in addressing the Convention pointed out that unionism was incomprehensible to totalitarian minds. They could not imagine a way of life that conforms itself to the people who compose it. Their way of life was to smash through the lives of subjects, bending them ruthlesssly to one set pattern. To-day, said Mr. Lyons, free labour movements exist only in Anglo-Saxon countries; and he referred to the recent coming into being of an Anglo-American Trade Union Committee, equally representative of the American Federation of Labor and the British Trade Union Congress.

In December, 1941, said Mr. Lyons, the American Federation of Labor firmly resolved to keep the wheels of industry moving. It voluntarily gave up the right to strike and other weapons and privileges that in peace time were considered essential to Labour.

Mr. Lyons was later presented with a gold medal by the Trades and Labour Congress of Canada.

Representing the International Labour Office Mr. Adolphe Staal, Chief of the Workers' Organization Service, said it was the duty of the I.L.O. to devise means of finding work for returning soldiers, and added that it was certain that workers would refuse to go back to conditions that prevailed before the war. A commission of "economic statesmen", he said, was now being set up by the I.L.O.

Report of Secretary-Treasurer

The report of the Secretary-Treasurer, Mr. Arthur D'Aoust, showed total receipts from all sources for the fiscal year ending July 31, 1942, amounting to $68,935.23 (this included a balance of $35,416.74 brought forward from the previous year), with expenditures totalling $27,495.35, leaving a balance of $41,439.88. The total membership upon which per capita tax had been paid was 164,375, a gain of 19,783 as compared with that reported for 1941. To this membership, however, could be added about 40,000 which would make the approximate number of members affiliated to the Congress 205,000.

Labour Political Action and Representation

Five resolutions were before the Convention urging political action, two of which recommended affiliation of the Congress with the C.C.F. party. After much discussion, affiliation with the C.C.F. was voted down and a resolution passed, as follows (in part):

"Be it resolved that labour political autonomy be left in the hands of the established labour political parties. . . .and that this Congress continue to act as the legislative mouthpiece for Organized Labour in Canada, independent of any political organization engaged in the effort to send representatives of the people to Parliament, the provincial legislatures or other elective bodies in this country."

Second Front

A length discussion followed the introduction of a resolution calling for a Second Front as part of the United Nations' all-out war effort, after which the resolution was passed, as follows:

"Whereas, the leaders of the United Nations, meeting in Washington recently, announced their decision to open a Second Front against Hitler Germany in 1942; and whereas, this decision will demand an intensification of our whole war effort, and a strengthening of our national unity, to make possible the necessary building-up of our armed forces, and the increasing of our production of planes, guns, tanks, ships and other war supplies. Therefore, be it resolved that this 58th convention of the Trades and Labour Congress of Canada go on record as supporting the earliest possible opening of the Second Front in Europe, and instruct the incoming Executive to approach the Dominion Government with proposals for greater labour-management government co-operation in all phases of the war effort, to guarantee that Canada will play her full part in ensuring final victory over our enemies."

The convention voted down a resolution suggesting that the Congress consider ways and means of going into industrial organization. Two resolutions were passed urging the Government to prosecute employers who have prevented workers from joining a union

of their own choice, and to order them to re-hire all workers discharged for union activity.

Labour Representation on Government Boards

Respecting Labour representation on Government boards a resolution was passed (in part) as follows:

"Be it resolved, that this Congress go on record as strongly opposed to the action of the Government in transferring Government authority to large industrialists and millionaires whose past has been one of hostility to labour and whose present power is a serious menace to Canadian democracy; and be it further resolved that we request the Dominion Government to immediately take the necessary steps to bring the directors and management of the various companies that have been set up by the Department of Munitions and Supply directly under the control of Parliament and that on any and all boards set up labour be given at least equal representation as is given to the business men and large industrialists."

Other Resolutions Adopted

Many other resolutions were passed by the convention, among which were the following:

Endorsing immediate total war to the limit of our national capacity to produce and fight.

That the Government take over all war industries so that they may be operated without profit.

That increased facilities be given the Justice Department to deal quickly with cases of well-known anti-fascists and trade union leaders in internment camps.

Asking release of all anti-fascists who are not guilty of any criminal offence or of breaking any law.

That the Justice Department rigidly apply the Defence of Canada regulations against all fascist elements and fifth-columnists.

That local trades councils reconsider their policy of banning communists and communist sympathizers.

Urging appointment of organized labour representatives on all Selective Service boards.

Asking the Dominion Government to encourage formation of labour-management production committees in all basic industries.

That in all war contracts preference be given to firms living up to Order in Council P.C. 2685.

Favouring the principle of national wage scales and agreements similar to those in the United States aircraft and shipbuilding industries.

That the Trades and Labour Congress of Canada do all in its power to introduce legislation to guarantee full collective bargaining rights to all workers, similar to the Wagner Act.

Protesting against formation of company unions in plants operated by the Government.

Opposing the use of the armed forces in labour disputes conducted in a lawful manner.

That Reserve Army men, during their training period, be compensated on the same basis as the permanent force.

Asking the Dominon Government to handle all salvage work, thus eliminating private profiteering from salvage campaigns.

Recommending that Provincial minimum wage boards be urged to bring up minimum wages to present-day living standards by an increase of at least 20 per cent.

That the Trades and Labour Congress urge all international unions to do their utmost to organize the unorganized.

Asking that the Old Age Pension qualifying age be reduced to 65 years, that the pension be increased, and that a contributory retirement scheme be incorporated in the Old Age Pensions Act.

That those who ask for loans under the National Housing Act be compelled to pay the trade union or prevailing rates of wages.

That no person be ordered to remain on a job at less than the union rate if another job at union rate is available.

Asking equal pay for equal work for male and female workers.

That decisions of the National and Regional War Labour Boards be rendered within a certain specified time.

That all employees, pensioners, and dependents of the Armed Forces who are now excluded be brought under the cost-of-living bonus provisions.

That labour representatives be asked to supply monthly reports on the cost of living throughout the Dominion.

Urging improvement in conditions of seamen's employment, and the placing of sea-going men under the provisons of the Fair Wage Act.

Urging enactment of a national health insurance scheme on a contributory basis.

Abolition of night work in bake shops.

That all persons in receipt of wages or salaries make contributions to the Unemployment Insurance fund on the first $3,000 of such income.

That marine engineers be brought under the Unemployment Insurance Act.

That taxation rates be reduced for the lower income groups and that a limit of $15,000 be placed on all personal incomes.

Urging unity in the Workmen's Compensation laws of the various provinces.

Favouring provision of holidays with pay for all workers.

Favouring complete Government control of the sale of liquor.

Urging free university education to those now denied that privilege for financial reasons.

Asking that barbers be relieved from the rules of the price ceiling law so that barbers' earnings could be stepped up to meet the increased living cost.

Election of Officers

The election of officers resulted as follows: President, Tom Moore, Ottawa; Vice-Presidents, P. R. Bengough, Vancouver, Pat Sullivan, Toronto, and J. A. Whitebone, Saint John; Secretary-Treasurer, Arthur D'Aoust, Ottawa.

Announcement was made of the election of four of the provincial executive committees, as follows:

Manitoba—Donovan Swailes (Chairman), R. G. Anderson, J. B. Graham and F. Chester King, all of Winnipeg.

Ontario—John Gavin, Toronto (Chairman), J. F. Manley, Hamilton, J. Thoms, Toronto, and Bob Barnett, Ottawa.

Saskatchewan—P. W. Haffner, Regina (Chairman), A. Mose, Moose Jaw, W. Smith, Saskatoon, and H. Davis, Prince Albert.

British Columbia—F. E. Griffin, Vancouver (Chairman), H. E. Hanson, Powell, B.C., Birt Showler and W. T. Burgess, both of Vancouver.

The 1943 convention will be held in the City of Quebec.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Selective Service Regulations—Women in Mining Work—War Contracts—Japanese Workers—Seamen and Pilots—Unemployment Insurance—Minimum Wages in Alberta and Quebec

UNDER the War Measures Act new National Selective Service Regulations extending Government control over employment have been issued. The labour shortage in Manitoba mines and metallurgical works and at the Sudbury plant of the International Nickel Company, Limited, is to be met by the employment of women in certain capacities. Standard general conditions, some relating to labour, have been drawn up for incorporation in different types of Munitions and Supply contracts, and conditions of work for Japanese persons employed by the British Columbia Security Commission have been regulated. The Merchant Seamen Order has been amended and war bonuses authorized for the crews of Department of Transport vessels. Pilotage dues in the Restigouche River District have been raised and certain Halifax pilots authorized to command pilot vessels. Workers engaged partly in insurable and partly in non-insurable work may now be covered by unemployment insurance. In the provinces, Alberta has issued new general minimum wage regulations for female workers and Quebec has renewed four minimum wage orders.

Dominion

National Selective Service Regulations, 1942

The National Selective Service Regulations, 1942 (P.C. 7595, August 26) prevent a worker from leaving his job or being dismissed without seven days' notice, channel all transfers of workers through Employment and Selective Service Offices, stabilize employment in agriculture, and authorize Selective Service Officers to interview persons for the purpose of directing them into more essential work and to compel unemployed and part-time workers to accept suitable full-time employment. Provision is made for appeals, reinstatement in peace-time employment and the grant of travelling and living allowances. The regulations, effective September 1, repeal the Order prohibiting enticement of workers in war industry (LABOUR GAZETTE, 1940, p. 1102, 1941, p. 728), the Stabilization of Employment in Agriculture Regulations (LABOUR GAZETTE, 1942, p. 422), the Order providing for travelling and living allowances for transferred workers (LABOUR GAZETTE, 1941, p. 1034), and the Control of Employment Order (LABOUR GAZETTE, June, 1942, p. 675).

An order gazetted September 12 under P.C. 1445 (LABOUR GAZETTE, April, 1942, p. 416) required women of 20 to 24 years to register for the purposes of the man-power inventory. (For a fuller account of these regulations, see p. 1018.)

Women Workers for Ontario Mining Company

The employment of women by the International Nickel Company, Limited, Sudbury, in such jobs as the Dominion Minister of Labour deems suitable for women workers has been authorized by an Order in Council of August 13 (P.C. 7032) under the War Measures Act. The Ontario Mining Act forbids the employment of women or girls in or about any mine except in a technical, clerical or domestic capacity but a shortage of male labour has necessitated a modification of this policy to maintain nickel production for war purposes. The Company is required by the Order to provide whatever facilities may be prescribed by the Federal Minister of Labour, after consultation with the Ontario Minister of Mines, for safeguarding the health and welfare of women workers. Similar action has been taken in Manitoba to permit women to be employed in the metallurgical works attached to any mine, but in Manitoba the Provincial Government had power under the Manitoba Mines Act to regulate the employment of women. In Ontario the provincial Act gave the Ontario Government no such authority.

Munitions and Supply Contracts

Four sets of standard "general conditions" have been drawn up for inclusion by reference in four types of Munitions and Supply contracts to eliminate the cumbersome process of writing a set of general conditions into every contract. Some of the conditions, which are incorporated in P.C. 6284 of July 20, concern labour. They apply to contracts for munitions and supplies, capital expenditures, shipbuilding and cost-plus construction let by the Governments of Canada or of any Allied Power or by a Government-owned company in Canada.

All four sets of conditions contain stipulations that Canadian labour and materials shall be used as far as possible, that ex-service men shall be employed in reasonable numbers if available and competent, and that the labour conditions which are referred to in the contract and which may be applicable for the time being or may be made applicable to the work under any Dominion or Provincial legislation shall be complied with. All sets of conditions but those for capital expenditure contracts declare that the contractor must comply with federal, provincial or municipal regulations in regard to such matters as sanitation and medical supervision of the health of workers. The conditions for shipbuilding contracts prohibit the contractor from enticing labour away from other shipyards engaged on similar contracts and require him to train his own workmen, if necessary, in order to carry out the contract.

Employment of Japanese in Canada

By an Order in Council of July 31 (P.C. 6758) Japanese persons employed by the British Columbia Security Commission in connection with the evacuation and care of enemy aliens are to be subject to the same conditions of work as are enemy aliens employed in work camps under P.C. 1348 of February 19, 1942 (Labour Gazette, March, 1942, p. 254). The latter declares that the aliens shall be paid on the basis of an eight-hour day and 48-hour week at 25 cents per hour for unskilled labour, and empowers the Minister of Labour to make regulations regarding wage schedules, hours of work, medical inspection and care, hospitalization, unemployment insurance contributions and workmen's compensation benefits for such aliens. If the alien has dependents in Canada he must assign $20 of his monthly earnings for the maintenance of such dependents and may receive, with the approval of the Minister of Labour, an allowance of not more than $5 a month for each dependent child up to a maximum of five. The provisions of the Government Employees Compensation Act apply to these workers to the extent that they may receive compensation for permanent disability not exceeding two-thirds of their average weekly earnings, but are to receive no compensation and only first aid, medical and hospitalization expenses for temporary disability.

Merchant Seamen Order

The Merchant Seamen Order of April 4, 1941, (Labour Gazette, 1941, p. 650; March, 1942, p, 307) has ben further amended by P.C. 6894 passed August 5. The amendment stipulates that Committees of Investigation appointed to examine the conduct of seamen obstructing the sailing of a ship shall in future consist only of representatives of the Department of National Defence for Naval Services and the Royal Canadian Mounted Police. Formerly the Committees also included a representative of the Department of Transport but the departure of ships has been delayed by difficulties in securing the services of such a person. In addition, the amendment extends the term "seamen" to cover manning pool staffs and persons carried on the strength of manning pools, and declares that the term "maninng pool" now includes all manning pools set up in Canada under P.C. 14/3550 of May 19, 1941 (Labour Gazette, 1941, p. 957) and the Manning Pools (Alien Merchant Seamen) Order, 1942 (Labour Gazette, July, 1942, p. 796).

War Bonuses for Seamen

The payment of war bonuses to seamen employed in Department of Transport vessels operating on or after June 1, 1942, in specified war zones has been authorized by an Order in Council of August 19 (P.C. 122/7359). This step was necessary to overcome difficulties in obtaining crews for Dominion Government steamers in competition with private employers who already pay such bonuses. The bonuses are to be 25 per cent of the basic rates of pay.

Pilots and Pilotage Dues

To meet the scarcity of certificated master mariners to command pilot vessels in the Halifax Pilotage District, the eleven licensed pilots of the district who do not hold the proper Master's Certificates of Competency have been authorized by an Order in Council passed August 18 (P.C. 7292) to act as masters of pilot vessels when required.

The by-laws of the Restigouche River Pilotage District, New Brunswick (Labour

GAZETTE, 1935, p. 321) have been amended by an Order in Council dated August 18 (P.C. 7293), to authorize a 10 per cent surcharge on all pilotage dues for the duration of the war. Similar increases have been permitted in the Pilotage Districts of Quebec, Montreal and St. Lawrence-Kingston-Ottawa, and a 25 per cent surcharge was authorized in the British Columbia District (LABOUR GAZETTE, 1942, January, p. 59; March, p. 307; August, p. 925). The amendment also raises from $3 to $5 the fee for embarking and disembarking pilots by pilot boat and sets new rates for movages of ships over 600 tons.

Unemployment Insurance Act

A new regulation has been added to the Unemployment Insurance Regulations regarding contributions by P.C. 7031 of August 13. It declares that a person employed partly in insurable and partly in non-insurable employment under the same employer may, if his employer consents, be treated as if wholly engaged in insurable employment. This treatment is accorded the worker only from the date that the employer registers his consent with an Employment and Claims Office, and ceases when he withdraws such consent or if the worker is employed for fifteen consecutive weeks in non-insurable employment.

Elsewhere in this issue a reference will be found to the Order in Council 7994 of September 4, by which Local Offices and personnel of the Unemployment Insurance Commission have been placed at the disposal of the Minister of Labour to assist in the administration of the National Selective Service Regulations.

Provincial

Alberta Minimum Wage Act

New general regulations for the enforcement of minimum wage orders governing female workers were gazetted July 31 and are effective from that date. They replace regulations issued in 1937. As before, they stipulate that not more than 25 per cent of the employees of any establishment may be learners or apprentices but add that where there are less than four workers, one apprentice may be employed. Posting of all minimum wage orders which affect any employee in an establishment is still compulsory but the monthly statement of overtime worked and rates paid for such overtime is no longer required by the general regulations.

Manitoba Mines Act

By an Order in Council gazetted August 15, the Director of Mines has been authorized to permit the employment of women in work about the surface of mines and metallurgical works in Manitoba during the present conflict and for a period up to six months after the cessation of hostilities. The Order repeals the section of the existing regulations issued under the Mines Act in 1940 (LABOUR GAZETTE, 1940, p. 562) which forbade the employment of female persons in or about any mine or metallurgical works except in a technical, clerical or domestic capacity, but it expressly stipulates that no female person shall be employed underground in any mine. Employers will be granted permission to employ women on such terms and conditions as the Director deems advisable and such permission or any term or condition of it may be cancelled or altered at any time by the Director.

Quebec Minimum Wage Act

Four orders have been renewed. By a notice gazetted August 15, Order 14 concerning public building maintenance men in the District of Montreal (LABOUR GAZETTE, 1938, pp. 1099, 1236; 1940, p. 124) is to remain in force until September 1, 1943, and notices gazetted August 29 extended to the same date Order 28 relating to dye-works and laundries in Quebec City (LABOUR GAZETTE 1939, p. 1003; 1940, p. 447) and Order 29 governing taxicabs and automobiles for hire in the cities of Quebec and Levis (LABOUR GAZETTE 1939, p. 1002). Order 30 applying to the manufacture of wooden boxes and other wooden objects (LABOUR GAZETTE, 1939, p. 1112) was renewed to October 1, 1943, by a notice gazetted August 29.

NUTRITION IN CANADIAN INDUSTRY

Activities of Nutrition Services in Working towards a Better Standard of Health among Canadian War Workers

THE LABOUR GAZETTE has previously referred (May, 1942, p. 573 and August, 1942, p. 880) to the establishment in the Department of Pensions and National Health of the Nutrition Services Branch. One of the duties of Nutrition Services is the inspection and supervision of food facilities in war industries.

A pamphlet entitled *Nutrition in Industry* has been issued by Nutrition Services which gives an account of inspections made in war industries up to July 1, 1942. At this date Nutrition Services had inspected about 150 industries, comprising about 200,000 workers.

This inspection meant that a trained nutritionist visited the plant, contacted the management, the medical services and inspected the canteen or other food serving establishment. A detailed questionnaire was filled out for each plant. Ultimately an individual letter was sent, commenting on what was found, and how it might be improved.

In addition to the above 150 inspections many other plants have been contacted and information obtained. The following table gives a summary of food facilities in 363 Canadian war industries, which include well over half of the war workers in Canada.

TABLE SHOWING FOOD AND EATING FACILITIES IN 363 CANADIAN WAR INDUSTRIES, ACCORDING TO THE NUMBER OF EMPLOYEES

No. of Employees	Number of Plants	Cafeterias per cent of Total	Canteens per cent of Total	Mess Rooms per cent of Total	Dietitians per cent of Total
Under 100	120	2	8	6	..
100 to 199	63	6	21	19	..
200 to 299	30	7	33	17	..
300 to 499	44	25	43	27	2
500 to 750	37	43	59	22	3
751 to 1,000	14	43	57	21	..
Over 1,000	55	64	71	30	18
Average Percentages		27	41	20	4

Commenting on this table, the pamphlet notes the following points:

"1. Larger plants tend to have a higher percentage of cafeterias, and may also have canteens and mess rooms in addition.

"2. Some small plants, even with less than 100 employees, are operating cafeterias, so that this is not a facility for large plants only.

"3. The feeding facilities cannot be considered adequate since even Mess Rooms (places in which to eat, but no other facilities) are not very numerous."

In a foreword to the pamphlet Dr. L. B. Pett, Director of Nutrition Services, stresses the necessity of maintaining a high standard of health for workers if peak production is to be obtained in the rapid expansion of war industry. "During the first World War, Great Britain clearly proved that when workers got well-cooked meals or supplements to their lunches in the plant, there was marked improvement in the health of the workers, a reduction in sickness and absenteeism, and increased efficiency. This has been re-emphasized in the present war."

Nutrition in Great Britain

Dealing with the position of nutrition in British Industry Dr. Pett states:

"Great Britain now requires every war factory employing over 250 people to provide a canteen where hot meals may be bought. Although this affects directly only about half the war workers in Britain it shows recognition of the importance of nutrition. In Canada the contribution that proper nutrition can make to health and production, a contribution which can be expressed in figures like 10 per cent and 25 per cent, has not received much attention."

As a result of examinations by Nutrition Services of several hundred lunches in different plants and cities it was found that if a worker bought a lunch in a plant cafeteria it was twice as likely to be a good lunch as if he brought his own. This does not apply to lunches bought at a canteen or booth. A "good" lunch was described as including: 1. A sandwich or plate lunch containing protein foods, such as meat, fish, eggs, cheese, or beans. 2. A vegetable other than potatoes, or a fruit. 3. Milk, preferably as a beverage.

Recommendations Concerning Nutrition in Industry

At the meeting of the Canadian Council on Nutrition on June 5, 1942, the following recommendations were adopted:

1. Since a multiplicity of effort would annoy industry, and labour alike, the primary field of

inspection and assistance with regard to food facilities in war industries should rest with qualified representatives of the federal office (Nutrition Services), but local groups are urged to make industry, and the homes of industrial workers, a part of any nutrition program after consultation with Nutrition Services. (See also recommendation No. 10).

2. Industrial groups wishing to improve nutritional conditions are urged to get help from Nutrition Services, Ottawa.

3. All plants having war contracts should assist the workers to get nutritious meals of natural foods, with reasonable ease and economy.

4. All plants having war contracts and providing meals to employees should employ or consult a qualified nutritionist or dietitian.

5. Plant-managed food dispensaries should be run on a non-profit basis, or profits should be used to provide (for example) free milk in the plant.

6. Between-meal rest periods, together with an opportunity of obtaining food, are highly recommended. Milk, cocoa, fruit juice or tomato juice are to be preferred as beverages.

7. The consumption of foods of low nutritional value such as soft drinks, candy and sweet goods, must be discouraged in favour of foods of high nutritional value.

8. Where the working day exceeds eight hours, more than one meal or lunch period should be provided at the plant.

9. An effort must be made to change the food habits of workers, and this must be done indirectly in the food arrangements, etc., as well as directly by educational methods. The co-operation of the plant medical services and the management, as well as of the cafeteria management, is needed.

10. Co-operation between Divisions of Industrial Hygiene in Provincial Departments of Health and Nutrition Services is urged.

The Approach to the Problem

Many practical suggestions are made in the pamphlet concerning the problems to be dealt with in establishing a proper nutritional program in any particular company. In a section entitled, "What to Provide," the pamphlet deals with the respective merits of the cafeteria, the lunch counter, the mobile canteen, the fixed canteen, and the mess-room. Suggestions are given as to lay-out, planning the meals, serving hours, and certain other details. Several pages of suggested menus are included. In regard to management, there are sections on company-operated and concession-operated cafeterias. It is considered desirable on the whole to have a cafeteria run by the company itself on a non-profit basis. In this way control may be maintained over prices and over the nutritional quality of the meals. "Many companies," it is stated, "find a greater morale-building effect by operating a cafeteria with the advice of an employees committee. A feeling of a club room is created and a better response is found to price adjustments and to complaints."

"Victory Meals"

Quoting Alberta M. Macfarlane, Educational Director, National Restaurant Association, the pamphlet deals with the question of encouraging the employee to choose nutritional foods rather than cakes, pies, candy and soft drinks. "Many companies say, 'We give the worker what he wants.' The greatest present need to promote the health and efficiency of the industrial worker is to get more information and greater knowledge to him. How can this be done? Posters, talks, and little cards will all help.

"In planning the menus, it is advisable to list at least one well-balanced popular 'Special Victory Meal' for each meal. Make the selling price of this so attractive that it will be a best seller.

"Endeavour to maintain the selling price of essential foods at reasonable levels, no greater and preferably lower than that of an alternate of poor nutritional worth. For example, offer milk at a price equal or less than that of alternates like coffee and soft drinks.

"Encourage in-between meal feedings as an integral part of the workers dietary. One company in North Carolina serves refreshments that take fifteen minutes to dispense. They claim that by so doing they get more work out of the personnel, in the remaining forty-five minutes than they used to get in the hour."

Vitamin Pills in Industry

The question of whether to supplement workers' diets with vitamin pills is mentioned.

"Nutrition workers have known for some time that men maintained on vitamin-deficient diets become more easily fatigued and suffer from lassitude and loss of interest in work.

"Other symptoms known to occur in vitamin-deficient individuals are depressed mental states, soreness of muscles and backaches. The significance of these symptoms for men engaged in war work needs no emphasis."

It is suggested in the pamphlet that experiments with vitamin pills should not be undertaken without preliminary study and authoritative advice.

Copies of *Nutrition in Industry* may be obtained free from Nutrition Services, Department of Pensions and National Health, Ottawa.

MAN-POWER MOBILIZATION IN CANADA AND UNITED STATES

Methods and Procedure Discussed at Meeting Convened by International Labour Office

WAYS and means of mobilizing the man-power resources of the United States and Canada to meet the needs of the rapidly expanding war industries of the two countries were discussed early in September at an all-day closed meeting convened by the International Labor Office.

The meeting was attended by high Government officials of the two countries who are immediately concerned with problems of labour supply, and by representative spokesmen of United States and Canadian workers and employers.

In a brief address of welcome to the participants, Mr. Edward J. Phelan, Acting Director of the I.L.O., pointed out that the meeting was the sixth such gathering convened by the I.L.O. in the past 18 months. In sponsoring these meetings, Mr. Phelan said, the I.L.O. was animated by the conviction that they constituted a contribution to the war programs of both countries.

Preparations for the meeting were in the hands of Pierre Waelbroeck, chief of the Labor Conditions, Employment and Migration Section of the I.L.O., and Mrs. J. E. A. Johnstone, a member of the section, both of whom participated in the discussion. The documentary basis of the discussion, as prepared by the I.L.O., included the authoritative study, "Later supply and National Defence", which was prepared by Mr. Waelbroeck with the assistance of Mrs. Johnstone.

Discussion throughout the meeting was both frank and constructive, according to a statement made public at its conclusion by Carter Goodrich, chairman of the Governing Body of the I.L.O., who presided. The meeting made it amply clear, Mr. Goodrich said, that representatives of Government, employers and workers in both countries are "firmly united in their determination to assure that no obstacle is permitted to block the way to the full mobilization of the man-power resources of both nations."

The discussion did reveal differences of opinion among the three groups represented, Mr. Goodrich said, "but it disclosed at the same time that each group is resolved to solve these differences in the interests of a greater war production program."

Mr. Goodrich's summary of the discussion disclosed that Government officials of both the United States and Canada outlined proposals for the mobilization of their production forces that are either now in effect or projected for the near or more distant future. These proposals, he said, "were subjected to thorough scrutiny," with the Government representatives asking and receiving frank criticism of their policies and programs.

"I think there can be no doubt," Mr. Goodrich said, "that all the participants found much in the meeting that was of value to them in meeting the problems they are called upon to solve." He said the I.L.O. counted the discussion one of the most successful in the series of six Canada-United States meetings on labour supply held under I.L.O. auspices to date and as such, he added, "I think it can be considered as a contribution to the completion of the job that both countries share—winning victory for the United Nations."

In his opening address, Mr. Phelan congratulated Mr. Tom Moore on his recent re-election to the presidency of the Trades and Labour Congress and expressed the hope that Mr. Moore, who is a member of the Governing Body of the I.L.O., would soon be completely recovered from the illness that has kept him from work for several months.

Among those attending the meeting were the following:

Canada—Elliott M. Little, Director of National Selective Service; Brig.-Gen. L. R. LaFleche, Associate Deputy Minister of National War Services; Paul Goulet, Associate Director, National Selective Service; L. E. Westman, Assistant Director, National Selective Service; Mrs. Rex Eaton, Assistant Director, Women's Division, National Selective Service; Lieut.-Col. G. S. Currie, Executive Assistant to the Minister of National Defence; Col. J. A. DeLalanne, Department of National Defence; Alfred Rive, First Secretary, Department of External Affairs; Alex. Skelton, Director of Research, Bank of Canada; H. W. Macdonnell, Canadian Manufacturers' Association; Gilbert Jackson of Toronto; H. Taylor, Toronto; John A. Bell, General Chairman, Order of Railroad Telegraphers; W. Dunn, Financial Secretary-treasurer, Toronto and District Trades and Labour Council; A. R. Mosher, president, Canadian Congress of Labour; Gerard Picard, General Secretary, Confederation of Catholic Workers of Canada.

United States—Brig.-Gen. Frank J. McSherry, Director of Operations, War Manpower Commission; Isador Lubin, Commis-

sioner of Labour Statistics and Economic Adviser to the President; A. Ford Hinrichs, Acting Commissioner of Labour Statistics; J. J. Corson, Director, U.S. Employment Service; T. C. Blaisdell Jr., Planning Committee, War Production Board; Wendell Lund, Director, Labor Production Division, War Production Board; Col. C. G. Parker, Deputy Director, National Selective Service; Miss Marjorie G. Russell, Executive Secretary, Labor-Management Committee, War Production Board; Henry I. Harriman, employer member of the Governing Body of I.L.O.; Clarence G. McDavitt, substitute employer member of Governing Body of I.L.O.; C. Dithridge, Pennsylvania Railroad; Robert J. Watt, international representative A.F. of L. and worker member of Governing Body of I.L.O,; John Green, president, Industrial Union of Marine and Shipbuilding Workers, C.I.O.; Martin H. Miller, National Legislative Representative, Brotherhood of Railroad Trainmen; J. J. Luhrsen, Railway Labor Executives Association.

LABOUR AND INDUSTRY IN BRITISH COLUMBIA, 1941.

Twenty-fourth Annual Report of Provincial Department of Labour

STIMULATED by war production, industrial payrolls in British Columbia for 1941 exceeded all previous records, according to the twenty-fourth annual report of the British Columbia Department of Labour, which described the growing intensity of the war effort as galvanic in its effect upon the industrial life of the Province.

During the latter half of 1941, employment rose to new heights, reaching an average figure of 110,771 for October, 1941, as against a high of 98,324 in September of 1940. The average weekly wage for all adult male employees rose to $30.67 for 1941, an increase of $2.56 over the preceding year and second only in the history of the department to the average wage of $31.51 which occurred in 1920.

Working hours were not, on the average, increased, remaining almost unchanged at 46.90 per week, compared with 46.91 in 1940.

Industrial Statistics, Payrolls, Etc.—Statistics were compiled by the department from reports received from 5,115 firms, 144 more than reported last year. A total payroll of $175,449,556 was reported by these firms. To find the total payroll of the Province, this figure was augmented by the following items: returns received too late for inclusion in the above summary, $535,884; estimated payroll of employees in occupations included in the Department's inquiry not sending in returns, $2,345,000; transcontinental railways, $14,395,-019; estimated payrolls of additional services not included in the industrial survey, viz. Governmental workers, wholesale and retail firms, delivery, auto transportation, ocean services, miscellaneous, $46,800,000. These items brought the payroll for the Province up to a total of $239,525,459. This represents an increase of $51,199,693 over 1941, and exceeds the previous high, recorded in 1929, by $47,433,210.

Of this total payroll a greater proportion went to wage-earners than in 1940. Officers, superintendents, and managers received 9·29 per cent of the total; clerks, stenographers, and salesmen, 10·11 per cent; while wage-earners received 80·60 per cent, compared with 78·63 per cent in 1940.

In an analysis of payroll statistics by industrial divisions, increases are shown in all but one of the twenty-five sections. Shipbuilding headed the list for 1941 with an increase of $6,593,198, followed by the lumber industries with an increase of $5,824,772 ,and contracting with $4,681,054; miscellaneous trades increased by $2,724,098; metal trades, an increase of $2,682,698; food products, an additional $1,886,176; metal-mining, up $1,171,400; smelting increased by $990,405; public utilities increased by $909,105; explosives and chemicals, up $866,475; pulp and paper mills, an increase of $789,615; printing and publishing, with $457,535; builders' materials increased by $447,981; oil-refining, up $412,463; wood (N.E.S.), up $359,962; laundries, cleaning and dyeing, $359,514; house furnishings, $247,362; breweries, $141,128; leather and fur goods, $90,018; paint-manufacturing, $52,587; garment-making, $47,673; jewellery-manufacture, $41,881; coal-mining, $9,301; cigar and tobacco manufacturing, $1,201.

The only industry in which a decrease was apparent was Coast shipping, which showed a loss of $173,609 over the previous year .

Weekly Wage Rates.—The figures in the accompanying table were taken from the report and show the average weekly wage in 1939, 1940, and 1941, by industrial classifications.

AVERAGE FULL WEEK'S WAGES IN EACH INDUSTRY (ADULT MALES ONLY)

Industry	1939	1940	1941
Breweries	$27 98	$28 23	$29 29
Builders' materials	23 23	24 15	26 26
Cigar and tobacco manufacturing	19 75	17 70	14 50
Coal-mining	29 39	28 04	31 84
Coast shipping	29 35	30 34	30 03
Contracting	26 12	27 52	30 21
Explosives and chemicals	25 75	31 67	33 39
Food products, manufacture of	23 23	23 59	25 65
Garment-making	24 25	25 22	26 51
House-furnishings	22 53	23 59	25 74
Jewellery, manufacture of	39 23	43 44	38 72
Laundries, cleaning and dyeing	23 19	24 00	24 76
Leather and fur goods, manufacture of	21 19	21 72	26 07
Lumber industries	27 14	28 83	31 01
Metal trades	25 38	26 18	29 90
Metal-mining	30 86	31 77	33 72
Miscellaneous trades and industries	23 91	24 36	26 97
Oil-refining	28 97	29 17	30 97
Paint-manufacturing	22 69	23 15	24 95
Printing and publishing	34 34	34 34	36 78
Pulp and paper manufacturing	26 54	29 84	32 13
Ship-building	28 55	31 74	35 27
Smelting	25 57	32 75	37 07
Street-railways, gas, water, power, telephones, etc.	28 63	28 57	30 93
Wood, manufacturing of (N.E.S.)	23 22	24 88	27 01

It will be observed from the foregoing table that increases in the average weekly wage per adult male worker occur in twenty-two of the twenty-five classifications. The largest increases, which were in leather and fur goods, smelting, coal-mining, metal trades and ship-building, varied from 97 cents to $1.79 above the average of $2.56 for the Province, workers in leather and fur goods receiving the largest average weekly increase. Decreases are to be noted only in three classifications: cigar and tobacco manufacturing, coast shipping, and jewellery manufacturing.

The following table taken from the report shows the number of wage-earners in each wage-rate classification—

CLASSIFIED WEEKLY WAGE-RATES (WAGE-EARNERS ONLY)

For week of Employment of Greatest Number	Males		Females		
	21 Yrs. and over	Under 21 Yrs.	18 Yrs. and over	Under 18 Yrs.	Apprentices
Under $6 00	180	111	318	113	68
$6 00 to $6 99	100	71	107	34	65
7 00 to 7 99	127	103	147	71	109
8 00 to 8 99	124	156	203	117	132
9 00 to 9 99	156	187	214	125	110
10 00 to 10 99	272	190	467	171	124
11 00 to 11 99	208	224	489	75	107
12 00 to 12 99	367	403	988	104	168
13 00 to 13 99	733	294	1,223	81	50
14 00 to 14 99	855	419	1,927	148	50
15 00 to 15 99	1,190	520	1,567	65	53
16 00 to 16 99	1,022	395	1,463	49	45
17 00 to 17 99	1,307	399	937	45	69
18 00 to 18 99	1,537	336	757	27	34
19 00 to 19 99	3,836	463	833	24	26
20 00 to 20 99	2,647	249	1,070	12	13
21 00 to 21 99	4,268	360	428	11	27
22 00 to 22 99	4,480	331	311	....	30
23 00 to 23 99	3,796	318	199	5	8
24 00 to 24 99	8,850	290	155	5	20
25 00 to 25 99	4,740	156	164	1	18
26 00 to 26 99	4,464	80	76	2	9
27 00 to 27 99	4,267	87	72	....	19
28 00 to 28 99	6,535	121	111	....	4
29 00 to 29 99	4,021	49	57	....	12
30 00 to 34 99	20,562	397	151	....	41
35 00 to 39 99	15,407	186	53	2	14
40 00 to 44 99	12,542	30	12	....	1
45 00 to 49 99	4,914	3	....	....	2
50 00 and over	4,260	1	4	....	1
Totals	117,767	6,929	14,503	1,287	1,429

Information regarding working hours, as submitted to the Department of Labour by the 5,115 firms reporting, shows 89·61 per cent of male and female employes working 48 hours or less per week, 4·49 per cent working from 48 to 54 hours per week, and 5·90 per cent working in excess of 54 hours per week. The average for working hours, as previously stated, was 46·90 hours per week.

Apprenticeship.—The Director of Apprenticeship in his report states that although it appeared for a time that a further demand might be made for special training schools to supersede apprenticeships almost entirely in so far as war industries were concerned, "it quickly became apparent that the ever-increasing expansion required could not be attained through specialization alone and that industry would have to continue to produce its key tradesmen through apprenticeship."

Approximately 20 per cent of apprentices have been lost by industry to the armed forces. This has led to a trend towards the apprenticing of lads at an earlier age than heretofore.

"Most of the apprentices who have enlisted or have been called up before the completion of their apprenticeship period are now employed in one of the Services at their apprenticeship trades, and will in all probability complete their apprenticeship in these Services, thereby reducing the problem that might otherwise arise on their resumption to civil life."

At the end of the year the total number of live apprenticeship contracts totalled 1,285. This figure includes 181 apprentices who are serving their country in one or other of His Majesty's Armed Forces.

The number of new contracts approved during the year totalled 468, while 177 apprentices satisfactorily completed their periods of apprenticeship, bringing the total number of apprentices who have completed to date to 532.

Factory Inspections.—During the year 1941, 2,240 inspections and reinspections of factories were made. In this report the Factories Inspector commented on accident-prevention as follows:

"The entrance of large numbers of inexperienced workmen into industry has resulted in an increase in accident frequency and severity. Investigation of injuries received has in some instances conclusively proven that they were received solely because of inexperience.

"Mention has been made in previous reports of the importance of instructing the inexperienced employees of the hazards attached to their work. The responsibility for imparting these instructions must be accepted and carried out by the foreman or superintendent of the plant. Investigations made would indicate that some individuals in these positions are not giving the personal attention required.

"While we feel assured that it is the desire of management of industry to provide safe and healthful working conditions for their employees, this can be achieved only through the combined efforts of every one connected with the plant. In performing our duties as Inspectors, we enter many industrial establishments and make many recommendations, but unfortunately we occasionally meet some individual who looks upon industrial safety standards and regulations as something to be enforced against industry. To such persons, we endeavour to convince them that the only purpose for which safety standards are ever developed by anybody or any group is to help every one carry on their accident-prevention work more effectively.

"As many of the new industrial plants have been constructed for the sole purpose of manufacturing supplies for the war effort, they have priority in their purchase of machinery and tools. Some of these plants have entirely eliminated line-shafting, all machines being individually driven, and each machine equipped with accident-prevention features. In striking contrast, we meet the sub-contractor, who, in his efforts to meet commitments, is obliged to purchase out-model or even second-hand equipment. We have, during our inspection visits, noted machines that had been discarded years ago placed back in service. These machines, while they lack many of the safety features of the modern equipment of to-day, will, if properly maintained and placed in charge of competent and safety-minded operators perform their part in production output without hazard to the operator."

The Inspector's report also deals with workers' health, employees' welfare, and women in industry, commenting on the second of these topics that the management of some industries have "for a considerable time proven to their own satisfaction that any expenditure made in connection with their employees' welfare is a sound investment."

Labour Disputes and Conciliation.—During 1941, there were eight strikes directly affecting 1,408 employees, as compared with only one strike in 1940. However, these eight disputes amounted to a time-loss of only 7,594 man-days, the lowest ever recorded.

Unemployment Relief.—The number of persons in receipt of unemployment relief shrank

from 30,943 at January 1, 1941, to 15,547 at December 31, of whom 8,544 were stated to be unemployable.

Report of Board of Industrial Relations

The eighth annual report of the Board of Industrial Relations gives details concerning the operation of the Male and Female Minimum Wage Acts and the Hours of Work Act.

Male and Female Minimum Wage Acts.—Completed returns were received from 5,612 employers of women and girls during 1941, an increase of 380 over the 1940 total. The survey covered some 34,204 women workers, an increase of 4,166 employees reported on the payrolls compared with the previous yearly period.

Statistics given in the report show that the average weekly wage for women over 18 years of age, or experienced, increased from $15.55 in 1940 to $16.04 in 1941. An increase was noted also in the average weekly wage for women under 18 years of age, or inexperienced, from $9.23 in 1940 to $9.74 in 1941. The percentage of employees under 18 years or inexperienced increased from 5·28 per cent to 6·70 per cent in 1941. Average hours worked per week rose fractionally from 41·48 to 41·82, still well under the 48-hour week permitted under the Act.

These figures do not include domestic workers, farm-labourers, or fruit-pickers, who are excluded from coverage under the Female Minimum Wage Act. Bank and federal employees also are not covered by Provincial legislation.

Reflecting the general up-trend in wages for the worker, the percentage of employes included in the returns who were receiving wages in excess of the legal minimum rose to 57·56 in 1941, as against a previous high of 53·56 for 1940. A corresponding drop was noted in the percentage indicating those receiving the actual legal minimum, and also a slight decrease in the percentage figure for those receiving less than the fixed rate. The latter group comprises the younger and less skilled employees for whom lower rates are set, and part-time workers who, by reason of the short hours, are unable to earn an amount equal to the weekly rate set for full-time employees.

Inspections and Collections.—During the year, the inspection staff of the Board made 12,104 investigations at plants and establishments covered by Orders of the Board, a decrease of 3,388 from the 1940 total.

Under the Female Minimum Wage Act, wage adjustments were made to 509 women and girls, employed by 316 firms, to a total of $10,607.15; while adjustments under the Male Minimum Wage Act for 676 men and boys employed by 313 firms resulted in the payment of $23,510.76 in arrears of wages due them. In addition to the above settlements which were made without recourse to the Courts, additional payments of $2,788.21 were made under court orders as the result of convictions for failure to pay the minimum wage. A total sum of $36,906.12 was therefore distributed to employees throughout the province.

Of the Court cases under these two Acts, 34 were on behalf of female workers and 32 for male. In the former group 32 convictions were registered while in the latter group 16 firms were convicted, the remainder of the cases being dismissed.

Under the Hours of Work Act, 42 cases of contravention of the regulations were brought before the courts, of which 41 resulted in prosecutions. Seventeen convictions followed the 29 cases brought to court under the Semi-monthly Payment of Wages Act, 12 cases being dismissed. Seven cases brought to court for contravention of the Factories Act resulted in the same number of convictions.

HOLIDAYS FOR WORKERS IN BRITAIN

MANY workers in Britain receive annual holidays with pay by customary arrangement, collective agreements, or wage orders issued by trade boards, agricultural wages committees and the Road Haulage Central Wages Board under the Holidays with Pay Act, 1938. During the first year of the war, however, many of these holidays were postponed or cancelled at the request of the Government, but by the spring of 1941 the Government had modified its policy and was encouraging the granting of annual holidays to maintain the efficiency of the workers.

The Committee headed by Lord Amulree which was appointed before the passage of the Holidays with Pay Act to investigate the extent to which holidays with pay were granted in Britain (Labour Gazette, 1938, p. 653) estimated that, in March, 1938, 3 million of the approximately 18½ million insured workers in Britain received annual holidays with pay under collective agreements and another 4¾ million were granted annual holidays with or without pay by the employer. By June, 1939, after the Act had been passed over 4 million were covered by collective

agreements, over 2 million by wage board orders and a total of 11 million workers received holidays with pay.

Collective agreements calling for holidays with pay cover such industries as engineering, shipbuilding, iron and steel, chemicals, drugs, boots and shoes, cement, pottery, bricks, matches, lead, printing, transport, etc. and the industrial staffs of government departments. District agreements apply to mining, metal, textiles and clothing, food and drink, transport, public utilities services, the distributive trades and a miscellaneous collection of other industries. Under the Holidays with Pay Act, the Government may assist in the administration of any holiday scheme in a collective agreement.

Orders Under the Holidays With Pay Act

The trade boards, agricultural wages committees and Road Haulage Central Wages Board whose orders in 1939 covered over 2,700,000 workers, were authorized but not compelled by the Holidays with Pay Act, 1938, (LABOUR GAZETTE, 1938, p. 1000) and the Road Haulage Wages Act, 1938, to include a holidays-with-pay requirement in their minimum wage orders. In 1940 there were 52 trade boards and all but four had amended their orders to include provision for holidays in accordance with the 1938 Act.

The orders of the wage-regulating authorities generally stipulate that an annual holiday not exceeding the employee's normal work-week shall be granted with pay to workers who have completed a minimum period of service. The length of the holiday varies with the length of service and the time at which or within which it may be granted is usually specified in the order.

Workers entitled to a full six-day holiday receive a full week's pay at ordinary rates for a normal work-week, and those entitled to less than six days receive the appropriate proportion of a full week's pay. If a worker leaves his employment before he is granted a holiday, he is paid the amount of holiday remuneration due for the number of days' holiday to which his period of service entitles him.

The problem of piece-workers is met by stipulating that piece-workers shall be paid for the holiday period at the minimum time rate which would have been applicable to them if they were employed on a time-basis. Some orders, such as the one applying to the chain trade, get around the difficulty by declaring that the holiday remuneration for all workers shall be a sum equal to one-fiftieth of the total amount received by the worker during the twelve months preceding the holiday period, up to a certain maximum.

Holiday Provisions in Collective Agreements

The terms of collective agreements relating to holidays vary from industry to industry. Most call for a six-day annual holiday with pay to be granted within a certain period of the year. Some guarantee certain statutory holidays as well. The majority require a minimum period of service and certain mining agreements disqualify workers for holiday payments in the event of an unlawful strike.

Holiday pay is usually computed at the ordinary rates for the regular work-week exclusive of overtime. In the case of piece-workers some agreements stipulate that they shall be paid during the holiday at the appropriate time-rate for a specified number of hours, and others that they be paid the amount of their average weekly earnings over a stated period. The latter is the practice in iron and steel, chemicals and printing. A worker who has qualified by length of service for a full holiday but leaves before it is granted receives full holiday payment under many agreements. If he has served only part of the qualifying time he usually receives a proportionate payment.

A few agreements, such as some coal-mining ones, prescribe fixed amounts for holiday remuneration, distinguishing between married and single workers, and the occasional one, like that for the boot and shoe trade, provides for contributory schemes. The agreements relating to the manufacture of pig iron and heavy steel, tube-making in Scotland, enginering and iron founding in South Wales and iron mining in Cleveland permit the worker to supplement his holiday payment by having a weekly amount deducted from his wages for this purpose.

Several agreements such as the one for cement manufacturing prohibit the worker from drawing holiday pay and continuing at work and a few, in coal mining in South Wales for example, make the holiday compulsory.

Most agreements stipulate that the holiday remuneration shall be paid just before the holiday begins. When holidays were postponed in the cotton, engineering and shipbuilding industries in response to the Government's appeal in 1940, it was decided that the holiday payments should be made at the time the holidays would have ordinarily been granted, under the terms of the agreements even though holidays were later arranged.

Workers who leave their employment before their holiday usually receive a payment proportionate to their service since the last holiday, though some agreements accord different treatment to workers who leave voluntarily or are dismissed for misconduct. In the industries where holiday credits are granted, the credits are often transferred if the worker changes his job.

Workers who remain at work as maintenance staff during the holiday period are usually granted a paid holiday at a later date, and in such cases do not receive anything beyond ordinary pay for work in the holiday period.

Engineering and Shipbuilding Agreements.—In the case of the engineering and shipbuilding industries, the amount of holiday pay is computed by crediting each worker each week with an allowance of one-fiftieth of his time-rate plus national bonuses for a 47-hour work-week. An employee working less than 47 hours a week is credited with the appropriate portion of the week's allowance for the number of hours worked, but no credit is given for hours in excess of 47 a week, nor for time lost, with or without reason. Workers on shift systems which do not permit them to work a 47-hour week receive holiday credits as if they had worked the full 47 hours at ordinary day-time rates instead of for the shorter number of hours at the higher shift rate.

No minimum period of service is required in these industries, but when the holiday period arrives, each worker receives as holiday pay only the amount represented by his accumulated credits since the last holiday period or since he was hired. The credits are intended to yield the equivalent of a week's pay, but these agreements do not specify how long the holiday shall be nor do they insist that the worker take the holiday. In most cases, however, he is forced to take a holiday as the whole plant closes down, but if it does not, there is nothing in the agreement to prevent him working at regular rates during his holiday week and receiving his accumulated holiday pay as well.

The holiday credits of workers who change their job are usually transferred to the new job. Workers who retire from employment are paid their accumulated credits, though in the engineering industry they must wait until the regular holiday period for payment. The next of kin receives the accumulated holiday credits of a deceased worker.

Holidays in War-Time

To ensure that maximum production would be maintained and no undue strain placed on transport facilities, the British Government in the critical month of May, 1940, asked that annual holidays be cancelled or postponed for the time being, unless they could be arranged so as not to interfere with production. Payment for work done on holidays was to be governed by existing agreements (LABOUR GAZETTE 1940, p. 633). In 1941 and 1942, however, the Government urged that the customary summer holidays should be taken if they did not exceed one week. It declared that

> "there must be no relaxation of effort, but in order that the national effort may be continued at the fullest stretch, it is essential that moderate and well-planned holiday breaks should be allowed."

It suggested that holidays be spread from spring to fall and be taken in rotation. The plan of closing down whole plants for overhaul should be adopted where possible but all the plants in the same area should not be closed at the same time and arrangements for receiving goods must be made during the holiday week to avoid transport dislocation. Travel by transport services should be curtailed radically and local authorities were urged to plan recreational attractions near home for the workers.

To bring the orders of the trade boards and the Road Haulage Central Wages Board into line with its announced policy regarding holidays in wartime, the Government passed an order in June, 1940, under the Defence (General) Regulations, 1939, altering the terms of these orders to permit the compulsory annual holidays to be postponed and divided into two spells, one of which should immediately precede or follow the worker's weekly rest-day. This order affected 1½ million workers in 160,000 establishments. Joint meetings of employers and employees in several industries have agreed to similar modifications of their holiday practices established under collective agreements.

In regard to statutory holidays, the Factories Act guarantees to women and young persons in England all Bank Holidays and Christmas Day and Good Friday. Easter Monday, Whit-Monday, the first Monday in August and the first week-day after December 25, are observed as Bank Holidays in England and in Ireland St. Patrick's Day is added. In Scotland the Bank Holidays are New Year's Day, Christmas Day, Good Friday and the first Mondays in May and August. Women and young persons in factories in Scotland are guaranteed any six week days fixed by their

employer. Many collective agreements also guarantee certain statutory holidays. In 1940 the Government cancelled the Whitsun, August and December Bank Holidays by orders issued under the Defence (General) Regulations, 1939 and 1940. However, in 1941 and 1942 the Whitsun and August Bank Holidays were restored though Good Friday and St. Patrick's Day were cancelled. The Government's statement of March, 1942, suggested that industry in general should take one-day breaks on Easter Monday, Whit-Monday and the August Bank Holiday, and a two-day break at Christmas or New Year's.

A recent ruling of the Minister of Labour declared that offices and factories granting more than two weeks' holiday will be considered able to dispense with staff.

Workers in Government-owned plants receive a week's holiday with pay after a year's service and on June 26, 1942, the Ministry announced that all dockers employed on Government schemes will be treated similarly.

Control of Absence

"Evidence is beginning to appear that prompt and steady attendance at work is declining," states a report entitled *Control of Absence* prepared by Policyholders Service Bureau, Group Insurance Division, Metropolitan Life Insurance Company, Ottawa. "This is indicated," says the report, "by inquiries from executives who report difficulty keeping their employees on the job full time every day. This is a condition that is found when times are good, and which largely disappears when times are bad."

The report outlines methods of controlling absences from work used by various firms, and discusses the relative merits of offering rewards for regular attendance and of imposing penalties for poor attendance. It concludes with the following outline of the situation:

Outline of Plan for Control

Absence to-day is controlled chiefly by careful supervision. When accurate records of attendance are kept and employees know that all absences are investigated, unavoidable absence usually can be reduced to a minimum. This subject is covered briefly in the following outline:

1. *Causes and Extent of Absence from Work*
   (*a*) Disability. Despite all that can be done to control absence, there is an unavoidable minimum, most of which is due to lost-time illness or accident. The amount varies with sex and age, and reflects the living and working conditions of the individual employees. While there is considerable variation among companies, eight days per employee per year might be considered as a typical figure.
   (*b*) Personal reasons. This type of absence is most subject to control. It should be kept in mind that, frequently, absence reported as illness really falls under this heading.
   (*c*) Jury duty, military service, etc.
   (*d*) Vacations and leaves of absence.
2. *Procedure for Keeping Attendance*
   (*a*) Control of absence is dependent upon accurate records.
   (*b*) Responsibility for keeping records is centralized in some companies; in others, it is a departmental matter.
3. *Procedure Required of Employees in Case of Absence*
   The majority of companies require the following:
   (*a*) That the employee arrange for his absence in advance if possible.
   (*b*) That notice be sent to the department head or personnel department in case the absence has not been arranged in advance.
   (*c*) That after a specified length of absence for which no arrangement had been made or no notice given, the employee's name be removed from the pay roll. Many companies investigate each case before the specified time elapses, however.
4. *Investigating Absences*
   (*a*) When employees are reported sick, many large organizations offer the services of a company nurse. She makes a friendly visit to render whatever assistance is possible and reports on the probable duration of absence and the need for further assistance.
   (*b*) When the cause of absence is unknown, some companies depend upon the department head to investigate. Others send a representative of the personnel department, telephone the absentee's home, or send a form letter, with a return postal card enclosed requesting information.
   (*c*) When employees return to work after illness, they often are required to bring a doctor's certificate, or report to the company medical department for an interview, or both.
   (*d*) When employees who have not been ill and whose absences have not been excused in advance return to work, they often are required to report to the personnel department or their own department head for an interview.
5. *Rewards and Penalties*
   (*a*) Employees occasionally are charged for tardiness and poor attendance. More frequently they are docked the time they have lost. Care should be taken, however, to see that the procedure for penalties is not in conflict with the Wages and Hours Law.
   (*b*) Indirect incentives for good attendance are: (1) The policy of considering attendance in determining promotions or salary increases; and (2) publicity given departmental records; sometimes posting names of those with the poorest records.
   (*c*) Attendance bonuses (in cash or in extra vacations). Payments in cash are rarely made at the present time.

UNEMPLOYMENT INSURANCE COMMISSION OFFICES UNDER ADMINISTRATION OF DEPARTMENT OF LABOUR

Employment and Claims Offices Become Local Offices of National Selective Service

THE administrative machinery of the Unemployment Insurance Commission has been placed at the disposal of the government for the urgent tasks of National Selective Service, it was announced on September 4, by Rt. Hon. W. L. Mackenzie King, Prime Minister of Canada. With the consent of the Commission, Local Offices of the Commission have been transferred for certain war time administrative purposes to the Department of Labour. Also the Commissioners have themselves undertaken to assume, in conjunction with officials of the Department of Labour, responsibility for some of the transferred functions and, in addition, to assist in the performance of other duties arising out of the enlarged scope of National Selective Service.

The Prime Minister stated that these arrangements are not to affect the autonomy of the Unemployment Insurance Commission. He expressed the appreciation of the Government for the readiness of the Commission to assume added wartime tasks in addition to their duties as Commissioners.

The text of the Prime Minister's statement to the press, together with the Order-in-Council providing for the transfer, follows:—

"The National Selective Service program has imposed a heavy responsibility for the direction and control of the relations between employers and employees upon the Minister of Labour, the Director of National Selective Service, and the officers of the Department of Labour. The Minister is responsible to Parliament for the due performance of the Government's policy. The administrative machinery of the selective service comes necessarily under the Director of National Selective Service, who reports to the Minister.

"In March of the present year, when the Director of National Selective Service was appointed, it was clear that the direction and control of the services of men and women would depend largely on the local administration. Rather than set up a series of new offices throughout the country, advantage was taken, for many of the purposes of national selective service, of the existence of the network of Employment and Claims Offices of the Unemployment Insurance Commission. The necessary co-ordination was affected by the appointment of the managers of the Employment Offices as National Selective Service officers for the region served by each office.

"The vast extension of direction and control announced on August 19 demands a corresponding expansion and strengthening of the local machinery of national selective service. For the most effective direction, and the avoidance of much duplication, it will be necessary to place this machinery under the immediate control of the Department of Labour. The Government has accordingly sought the consent of the members of the Unemployment Insurance Commission to the transfer of its local offices for certain war-time administrative purposes to the Department of Labour.

"In order to assist in meeting these imperative needs of war, the Unemployment Insurance Commissioners have generously agreed to continue to allow certain of the Commission's functions to be carried out in conjunction with the Department of Labour, and, to a greater extent than formerly, under its immediate direction.

"The Commissioners have themselves undertaken to assume, in conjunction with officials of the Department of Labour, responsibility for some of the transferred functions and, in addition, to assist in the performance of other duties arising out of the enlarged scope of national selective service.

"Under this wartime arrangement, Mr. Trottier, the Chairman of the Unemployment Insurance Commission, will continue to see that all the obligations imposed on the Commission under the provisions of the Unemployment Insurance Act are duly met. He will have a special responsibility to see that, under adjustments that are made, there is no infringement of the provisions of the Act or of the purposes of unemployment insurance. Mr. Trottier will act generally in the capacity of financial advisor and supervisor on matters relating to the fund. Mr. Mitchell, one of the three Commissioners, will act as Director of Employment Service and Unemployment Insurance, and Mr. R. J. Tallon, the other Commissioner, will act as Co-ordinator of Courts of Referees and as Acting Chairman of the National Employment Committee in the absence through illness of Mr. Tom Moore.

"The wartime arrangements are not to affect the autonomy of the Unemployment Insurance Commission. While helping to meet the pressing obligations of National Selective Service, the control, for the time being, by the

Department of Labour of the administrative machinery of the Employment Offices will have the further very great advantage of strengthening the administrative machinery to meet the employment problems of post-war reconstruction.

"The government greatly appreciates the readiness of the Unemployment Insurance Commissioners to place their administrative machinery at the disposal of the government for the urgent tasks of national selective service, and their generous co-operation in assuming these added wartime tasks in addition to their duties as Commissioners."

The Order-in-Council implementing this arrangement follows:—

P.C. 7994

AT THE GOVERNMENT HOUSE AT OTTAWA

FRIDAY, the 4th day of September, 1942

PRESENT

HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL

Whereas consideration has been given to the problems arising out of the administration of the recently enacted National Selective Service Regulations, 1942, and discussions have been had with the several members of the Unemployment Insurance Commission, who have expressed a strong desire to co-operate in every way possible in the present emergency;

And whereas as a result of the discussions it would appear advisable, for the efficient administration of the said National Selective Service Regulations, 1942, and more particularly to avoid duplication of services, to utilize the local employment and claims offices of the Unemployment Insurance Commission as well as the officers, clerks and employees of the Commission;

And whereas the Unemployment Insurance Commissioners concur in this opinion and have expressed their willingness to place at the disposal of the Minister of Labour the offices and personnel aforesaid and to afford all personal assistance in their power in connection with the administration of the regulations to serve the present emergency;

And whereas the Right Honourable W. L. Mackenzie King, Prime Minister and President of the Privy Council, recommends, with the concurrence of the Unemployment Insurance Commissioners, that for the security, defence, peace, order and welfare of Canada, the order hereinafter set out be made;

Now therefore, His Excellency the Governor General in Council, under the authority of the War Measures Act, Chapter 206, Revised Statutes of Canada, 1927, is pleased to order and doth hereby order as follows:

1. The control and supervision of the officers, clerks and employees of the Unemployment Insurance Commission as well as the several premises occupied by the Commission is hereby placed at the disposal of the Minister of Labour for a period which shall end on a day fixed by a proclamation issued under section two of the War Measures Act to the effect that the war no longer exists or on such earlier day as may be fixed by Order in Council and the Minister of Labour may utilize such personnel and premises for the administration of the National Selective Service Regulations, 1942, and, without prejudice to the autonomy and continuity of the Unemployment Insurance Commission, shall in co-operation with the Unemployment Insurance Commissioners administer the Unemployment Insurance Act, 1940, along with the administration of the National Selective Service Regulations, 1942, aforesaid, and, in that behalf, may exercise the rights powers, duties, and functions of the Unemployment Insurance Commission, which rights, powers, duties and functions are hereby extended to the Minister of Labour for the period aforesaid.

2. The Chairman of the Unemployment Insurance Commission shall be fully informed by the Minister of Labour from time to time touching all matters relative to the administration of The Unemployment Insurance Act, 1940, and shall make representations from time to time to the Minister of Labour in order to prevent any infringment of and to secure such fair and liberal administration of the said Act as will best insure the attainment of the object thereof according to its true intent, meaning and spirit.

3. Notwithstanding anything contained in The Unemployment Insurance Act, 1940, one of the commissioners may with his consent be appointed as Head of the Branch of the Department of Labour charged with the administration of the Unemployment Insurance Act and the National Selective Service Regulations, 1942, which shall be known as the Employment Service and Unemployment Insurance Branch. Such commissioner shall, upon assuming such office, be known as the Director of Employment Service and Unemployment Insurance.

4. Notwithstanding anything contained in The Unemployment Insurance Act, 1940, one of the commissioners may with his consent be assigned the duty of reviewing decisions of the courts of referees established under the Unemployment Insurance Act and of making representations to the Minister of Labour and to the referees aforesaid with the object of bringing about uniformity of decisions. Such Commissioner shall also be appointed, in the absence on account of illness of the Chairman, as Acting Chairman of the National Employment Committee authorized by section ninety of the Unemployment Insurance Act.

5. The Officers, clerks and employees of the Unemployment Insurance Commission, shall, under the control and supervision of the Minister of Labour, in addition to the duties which may be required of them under the Unemployment Insurance Act, perform such other duties as the Minister of Labour may from time to time require in connection with the administration and enforcement of the National Selective Service Regulations, 1942, and amendments thereof.

(Sgd.) A. D. P. HEENEY,
Clerk of the Privy Council.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Statement of Unemployment Insurance Fund—Insurance Registration as at September 1—Report of Employment and Claims Offices—Employment Conditions at End of August

REPORTS from local offices of the Unemployment Insurance Commission showed that at September 1, 1942, 157,140 employers and 3,018,876 employees were registered. Of the latter, 2,493,859 were insurable and 525,017 were uninsurable.

The insurable group consisted of insurable employees of registered firms, and unemployed males whose last employment was insurable. The uninsurable group consisted of uninsurable employees of registered firms, partners and proprietors of these firms, and unemployed males whose last employment was uninsurable.

Employment and Selective Service Offices in the process of being established are not listed. Operational areas for these offices are being assigned by sub-dividing territory at present served by offices shown on the list. Registration records for employers and employees will then be redistributed in accordance with the area served by each office.

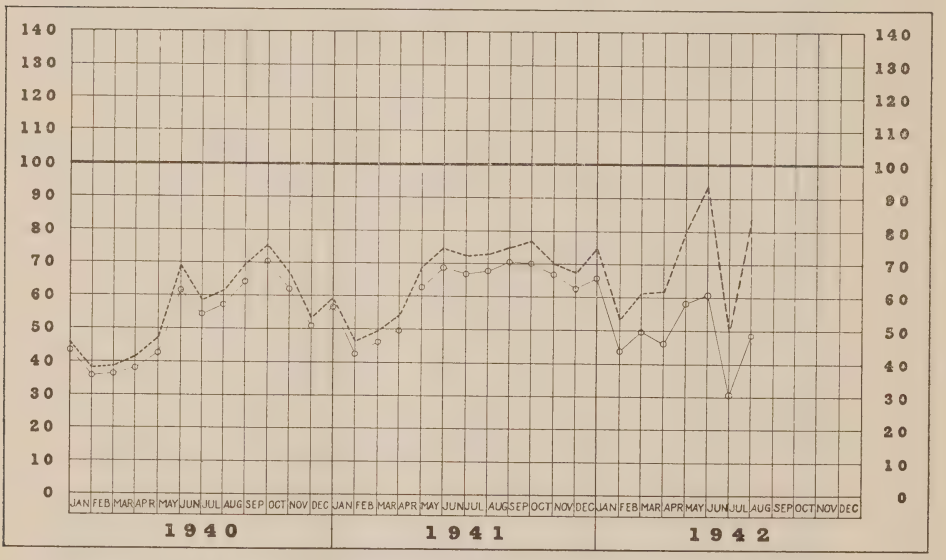
The Interest column represents the interest received on the due dates of the various Government bonds and includes accrued interest at the time of purchase. This figure does not include the accrued interest earned to July 31st.

'er and 'ee—employers' and employees' contributions.



Report of Employment and Claims Offices for July, 1942

Business transacted by Employment and Claims offices of the Unemployment Insurance Commission during the month of July, 1942, as indicated by the average daily placements effected, showed gains of 30 per cent and 18 per cent, respectively, over the previous period and over that of the corresponding month last year. All industrial divisions recorded advances over the preceding month, the highest being in manufacturing and construction. Increases, smaller in volume, but still comparatively substantial were also registered in trade, transportation, mining and logging. In comparison with July a year ago, an exceptionally heavy gain followed by both. At the close of the month, however, while the level of vacancies was 10 points above that recorded at the end of July, 1941, the level of placements was nearly 19 points below that of the corresponding month a year ago,—indicating the steady increase in the demand for workers and the diminishing supply of applicants available for employment,—the ratios in July, 1942, standing at 83·3 and 48·6, respectively, in comparison with ratios of 49·9 and 30·6 in June, and with 72·8 and 67·4 at the close of July a year ago.

The average number of vacancies reported daily by employers to the offices of the

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

was shown in manufacturing, with marked expansion, too, reported in trade and construction and a smaller addition in mining. This improvement was partly off-set by fairly large reductions in services, agriculture and logging and a smaller loss in transportation.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and of placements effected for each one hundred applications for work registered, each month, at Employment and Claims offices throughout Canada. In viewing the trend of the curves of vacancies and placements in relation to applications, a decidedly upward course was

Commission throughout Canada during July, 1942, was 3,567, as compared with 2,607 during the preceding month and with 1,900 in July last year.

The average number of applications for employment received daily by the offices during the month under review was 4,280, in comparison with 5,228 in June and with 2,611 during July a year ago.

The average number of placements made daily by the offices of the Commission during July, 1942, was 2,079, of which 1,820 were in regular employment and 259 in work of one week's duration or less, as compared with a total daily average of 1,600 during the pre-

ceding month. Placements in July, 1941, averaged 1,761 daily, consisting of 1,142 placements in regular and 619 in casual employment.

During the month of July, 1942, the offices of the Commission referred 60,821 persons to vacancies and effected a total of 54,049 placements. Of these, the placements in regular employment were 47,309, of which 36,825 were male and 10,484 female, while placements in casual work totalled 6,740. The number of vacancies reported by employers was 71,484 for men and 21,235 for women, a total of 92,719, and applications for work numbered 111,269, of which 82,877 were from men and 28,392 from women. Reports for June, 1942, showed 65,166 positions available, 130,689 applications made and 39,981 placements effected. While in July, 1941, there were recorded 49,399 vacancies, 67,879 applications for work and 45,761 placements in regular and casual employment.

The following table gives the placements effected by employment offices, each year, from January, 1932, to date:—

Year	Placements Regular	Placements Casual	Totals
1932	153,771	198,443	352,214

NOVA SCOTIA AND PRINCE EDWARD ISLAND

During July, 1942, vacancies offered at Employment and Claims offices in Nova Scotia and Prince Edward Island were nearly 5 per cent in excess of those of the previous month and 70 per cent above those of July a year ago. Placements were over 5 per cent higher than in June and 32 per cent

more than in the corresponding month of 1941. The increase in placements over July last year was due to a substantial gain in manufacturing and smaller advances in construction and transportation. Mining also showed slight improvement. A fairly large decline was reported in services and others, much smaller in volume, in agriculture, trade and logging. Industrial divisions in which most of the placements were effected were:—manufacturing 1,296; construction 1,114 and services 977. There were 2,493 men and 700 women placed in regular employment.

New Brunswick

Employment opportunities, as indicated by orders received at Employment and Claims offices in New Brunswick during July were 59 per cent better than in June and 266 per cent higher than in the corresponding month last year. Placements also recorded gains of 46 per cent over the preceding month and of 141 per cent over July, 1941. Placements, as compared with those of the corresponding period a year ago, were more numerous in construction, manufacturing, transportation and trade, the only decline of importance being in services. Industries in which employment was found for more than 100 workers included:—construction 857; manufacturing 581; services 533; transportation 286 and trade 211. During the month 1,886 men and 396 women were placed in regular employment.

Quebec

Orders received at Employment and Claims offices in the province of Quebec during July called for 96 per cent more workers than in the preceding month and 97 per cent more than in July, 1941. Placements showed an increase of 62 per cent over June, but recorded a decline of 6 per cent from those of the corresponding period a year ago. Placements in comparison with those of July last year were fewer in services, logging, transportation and agriculture, but these losses were off-set by gains in manufacturing, construction, trade and mining. Placements by industrial divisions included:— manufacturing 6,023; construction 3,869; services 1,272; trade 841; transportation 228; logging 181 and mining 100. Placements in regular employment numbered 10,003 of men and 2,057 of women.

Ontario

Opportunities for employment, as shown by orders received at Employment and Claims offices in Ontario during July, recorded an increase of 31 per cent over June and of 77 per cent over the corresponding month a year ago. Placements were 23 per cent in excess of those of the previous month and 13 per cent higher than in July, 1941. Increased placements over July last year were reported in manufacturing, trade and mining, and losses in agriculture, construction, services and logging—the only change of these which was pronounced being the gain in manufacturing. Industrial groups in which most of the placements were effected were:—manufacturing 8,041; construction 3,752; services 3,510; trade 1,089; transportation 647; agriculture 613 and mining 610. There were 11,851 men and 4,499 women placed in regular employment.

Manitoba

There was an increase of over 6 per cent in the number of vacancies offered through Employment and Claims offices in Manitoba during July when compared with those of the previous month and of 35 per cent in comparison with July last year. Placements also were 14 per cent above those of June and 23 per cent more than in the corresponding month of 1941. Nearly all industrial divisions participated in gains in placements over July a year ago, the greatest expansion being shown in construction and manufacturing, with advances of smaller proportions in trade, transportation and logging. This improvement was partly off-set by losses recorded in agriculture and services. Placements by industries included:—services 1,038; construction 834; manufacturing 550; trade 306; transportation 188; logging 160; agriculture 142 and mining 111. There were 1,892 men and 466 women placed in regular employment.

Saskatchewan

During the month of July positions offered at Employment and Claims offices in Saskatchewan were 57 per cent more numerous than in June and 25 per cent higher than in July, 1941. Placements also were 74 per cent in excess of those of the preceding month and over 9 per cent better than in the corresponding period last year. All industries, except services and agriculture, registered gains in placements over those of the corresponding month a year ago, the highest being in trade and construction, but neither outstanding. Industrial divisions in which the largest number of placements was effected included:—services 821; construction 484; trade 345; manufacturing 205; agriculture 161 and transportation 120. Placements in regular employment numbered 1,241 of men and 510 of women.

Alberta

The demand for workers as shown by orders listed at Employment and Claims offices in Alberta during July was 69 per cent higher than in the preceding month and 71 per

cent more than in July last year. There were increases of 56 per cent and 45 per cent, respectively, in placements under the same comparisons. Reduced placements from the corresponding period a year ago were recorded in agriculture and logging, but these were more than off-set by increases in all other groups, the highest of which were in construction, services and manufacturing, the majority of placements recorded taking place in the following industries:—services 1,400; construction 1,325; manufacturing 518 and agriculture 410. During the month 3,011 men and 786 women were placed in regular employment.

BRITISH COLUMBIA

Employment and Claims offices in British Columbia were notified in July of nearly 5 per cent more vacancies than in June and 147 per cent more than in July, 1941. Placements also showed gains of 41 per cent over the preceding month and 57 per cent over the corresponding period last year. The only important change in placements from July a year ago was the improvement noted in manufacturing. There were, however, advances more moderate in volume shown in logging and trade, variations in other groups being small. Placements by industrial divisions numbered:—manufacturing 2,129; services 1,347; construction 1,258; logging 628; agriculture 401; trade 400 and transportation 189. There were 4,448 men and 1,070 women placed in regular employment during the month.

Movement of Labour

During the month of July, 1942, the offices of the Unemployment Insurance Commission effected 47,309 placements in regular employment, 2,890 of which were of persons to whom was granted the reduced transportation rate, 1,574 proceeding to centres within the same province as the despatching office and 1,316 to other provinces. The rate given, which is 2·5 cents per mile for coach tickets, tax extra, where the fare is at least $4, is granted by the railway companies to bona fide applicants at the employment offices who may desire to travel to distant employment for which no workers are available locally.

Certificates in New Brunswick were 7 in number, issued to 6 carpenters and one millwright proceeding from Campbellton to Chicoutimi. Business transacted by Quebec offices involved the making out of 736 vouchers, all provincial, the majority of the movement being for a construction project at Chicoutimi and consisting chiefly of labourers, although a few skilled workers, such as carpenters, millwrights, plumbers, moulders and drillers were included in the total. These men were despatched as follows:—by Granby 4. Hull 27, Joliette 36, Matane 23, Montreal 189, Quebec 121, Rivière du Loup 29, Rouyn 26, St. Hyacinthe 37, St. Jean 4, St. Jerome 24, Shawinigan Falls 79, Sherbrooke 43, Three Rivers one, Val d'Or 3, Valleyfield one and Victoriaville 2. La Tuque received 47 carpenters and 27 labourers—10 workers from Hull, 2 from Matane, 29 from Montreal, 14 from Quebec, 6 from Rouyn, one from St. Jean, 7 from Shawinigan Falls, one from Sorel, 3 from Three Rivers and one from Val d'Or. In addition, Rouyn sent to Val d'Or 2 bushmen and Victoriaville to Shawinigan Falls, 11 potmen. Ontario Offices granted 450 reduced rate certificates, 218 provincial and 232 interprovincial. Of the former, to points within its respective zone, Fort William shipped one bushman, North Bay one truck-driver, Port Arthur 36 factory hands, 22 bushmen, 12 camp builders, 9 cooks, 7 cookees, 6 dam builders, 4 drillers, 4 teamsters, 4 jackhammermen, 4 miners, 4 tractor operators, 3 muckers, 3 truck-drivers, 2 foremen, one watchman, one clerk, one lineman, one bulldozer operator, one machine helper and 14 labourers, and Sudbury, one clerk and 2 cookees. Besides these, Port Arthur received one bushman from Sudbury, and the latter office one blacksmith from North Bay. The remaining provincial distribution consisted of 2 factory hands going to Toronto and 4 apprentices to Peterborough, all from Cornwall; 4 factory hands from Kingston to New Toronto; 2 carpenters to Timmins, 4 labourers to Niagara Falls and one labourer to St. Catharines from Kirkland Lake; 3 carpenters and one carpenter's helper from Niagara Falls to Toronto for trans-shipment to a construction contract in Labrador; 16 carpenters and 3 labourers to Oshawa, 4 trainees and 2 machine operators to Hamilton and 4 trainees to New Toronto from North Bay; 2 bushmen to Timmins from Port Arthur; 17 machine operators to New Toronto from Stratford, and one millwright to Oshawa and 2 labourers to Welland from Sudbury.

Interprovincially, Fort Frances consigned to Vancouver 7 carpenters and 46 labourers; to Prince Rupert 20 labourers and to Nelson 5 labourers. Fort William transferred to Edmonton 2 cookees, one cook and 10 labourers; Pembroke sent to Moncton 33 bushmen and 14 carpenters; Port Arthur forwarded to Prince Rupert 8 axemen, 6 carpenters, 3 cookees, 3 compressormen, 2 drillers, one foreman, one blacksmith, one blacksmith's helper, one packer, one watchman, one steel sharpener, one jackhammerman, and 63 labourers; Toronto directed to Montreal one ship's plater and to Moose Jaw one welder. The provincial movement of

labour in Manitoba, consisting of the transferral of 85 persons, emanated from Winnipeg, 20 miners, 2 muckers, 2 guards, one smelterman, one carpenter, one machine-runner and 12 labourers going to Flin Flon and 11 bushmen, 8 cookees, 2 farm hands, 2 cooks, one harvester and 22 labourers to points within the Winnipeg zone. Interprovincially Ontario received 104 workers, Alberta 19 and British Columbia 302,—a total of 425. Of these, Winnipeg shipped to Port Arthur 57 bushmen, 11 cookees, 6 drillers, 4 cooks, one truck-driver and 14 labourers; to St. Catharines 8 factory hands, 2 lathe hands and one labourer; to Edmonton 7 cookees and 12 labourers; to Prince George 35 carpenters, one carpenter's apprentice, one cement finisher and 24 labourers, to Nelson one mine labourer; to Prince Rupert 6 carpenters, 3 cookees, one powderman's helper, one rock driller and 19 labourers, and to Vancouver 52 carpenters, 12 truck drivers, 7 cookees, 6 rock drillers, 3 bricklayers, 2 cement finishers, 3 mechanics, one packer, one powderman and 102 labourers, while Brandon transferred to Nelson 9 mine labourers, and Dauphin forwarded to Prince George 7 carpenters and one labourer, and to Nelson 4 labourers. All vouchers granted by the Saskatchewan offices, 308 in number, were for persons travelling to points outside the province, many of whom were unskilled workers, the distribution being as follows:—Moose Jaw to Edmonton 15 labourers, to Nelson 24 labourers and to Vancouver 20 labourers; Prince Albert to Nelson 41 labourers, to Prince George 8 bushmen and to Vancouver 25 millmen; Regina to Nelson 58 labourers; to Prince George 14 carpenters, to Sault Ste. Marie 2 labourers and to Vancouver 5 fruit pickers; Saskatoon to Edmonton 10 surveyors' assistants and 7 labourers, to Nelson 24 labourers, to Prince Rupert 31 labourers and to Sault Ste. Marie 7 labourers; Swift Current to Nelson one carpenter, and Yorkton to Edmonton 6 labourers, to Nelson 6 labourers and to Prince George 4 carpenters. Certificates at the reduced rate issued by Alberta offices numbered 868, of which 524 were provincial and 344 interprovincial. Of the first named, to centres within its respective zone, Calgary despatched 10 muckers, one miner, one timekeeper, one store-keeper, one truck-driver, and one labourer, and Edmonton 39 bushmen, 28 carpenters, 24 miners, 24 cooks, 20 cookees, 17 truck-drivers, 11 cat drivers, 7 dishwashers, 4 tractor operators, 4 foremen, 3 timekeepers, 3 driller's helpers, 2 deck hands, 2 linemen, 2 mechanics, 2 firemen, 260 labourers, and 18 workers in miscellaneous trades. In addition, Calgary sent to Edmonton 6 carpenters, one clerk and 27 construction labourers; Edmonton to Drumheller one farm hand, and Medicine Hat to Edmonton 4 pipeline labourers. To points outside the province, Calgary forwarded to Kamloops one cook and one millman, to Nelson 27 assistant smelter men, 2 smelter men and 18 labourers. to Penticton 6 fruit pickers, to Prince Rupert 35 labourers and to Vancouver 4 fruit pickers; Edmonton directed to Nelson 2 smelter men, one clerk and 35 labourers, to Prince George 3 cooks, 3 carpenters, one miner and one dishwasher; to Prince Rupert 33 mill hands, 18 bushmen, 8 carpenters, 3 cookees, 2 hookmen, 2 cooks, 2 truck-drivers, one fireman, one blacksmith and 85 labourers and to Vancouver one foreman and 3 labourers. Lethbridge shipped to Nelson 17 mine labourers and to Vancouver 13 riggers, one dragline operator, one timekeeper, one foreman, and one superintendent; Medicine Hat transferred to Nelson 9 labourers, and Red Deer also sent to Nelson 2 labourers. In British Columbia the entire movement was provincial, 5 bushmen, one flunkey and one cook proceeding from Kamloops to points within its own territory, one mucker from Nelson to Penticton, one miner from Nelson to Vancouver, one bushman from Vancouver to Kamloops and one fruit packer from Vancouver to Penticton.

Of the 2,890 persons transferred at the reduced rate during July, 2,283 journeyed over the Canadian National Railways, 536 over the Canadian Pacific Railway, 7 over the Temiskaming and Northern Ontario Railway and 64 over the Northern Alberta Railway.

Employment Conditions at the End of August

Placement activities as reported by Employment and Claims Offices during the month of July, 1942, together with statistical summaries for that period are covered by an earlier section of this report. Later reports received from these offices indicate that conditions at the end of August were as follows:—

Haying and early crop harvesting were general throughout Prince Edward Island and the Maritime Provinces. Around Newcastle potato digging had begun, while on the island the scheme of closing rural schools and securing children to help, usual in peacetime to meet this annual need, was being extended to cover a larger crop and more areas. Apple picking was beginning with fair crops predicted. The attractive prices being obtained for fish have meant the retention of many experienced workers in this work, despite attractive offers from other industries. Catches have

been fair on the whole with salmon, haddock and sardines up to seasonal standard, and lobster exceedingly good. Logging operations were curtailed in the Sydney area due to shortage of men. A few portable mills have begun Fall cutting, but the whole region reports a need for experienced woodsmen and pulpwood cutters. Mines in the Cumberland area were working full time, with more help than that available badly needed. In the Sydney area, collieries were operating on a five day basis, and further curtailment of work owing to disputes took place in all but one Inverness mine in this area. Manufacturing plants report capacity activity generally, despite isolated shortages of experienced workers or seasonal needs. Construction activity is limited to defence projects, but these are many, active, and being added to continually. Since much of Prince Edward Island's skilled labour has been transferred to the mainland, the new airport project at Summerside is employing farmers instead of more experienced building tradesmen.

Farmers in the Province of Quebec reported fewer requests for help as the month closed, since harvest had been completed and demands to meet tobacco crop needs had been met. Skilled labour for the logging industry was scarce. In some areas, farmers having completed their harvesting were securing employment as part-time labourers in local logging camps. Mining requisitions for help decreased to some extent although quarries had previously registered needs which were still unmet. A high level of activity was maintained in the manufacturing plants. Disputes in the shoe industry had been settled and production resumed. There was considerable movement of skilled men into war industries, over and above the constant flow into the armed forces; and there was, consequently, a movement of women as replacements, and into a greater number of categories as expansion took place. Building activity was confined principally to defence projects, with expansion of the air training bases at several points, the renovation of one woodworking mill into a shell processing plant, progress of wartime housing in more than one locality, and an electrical project at Levis reported. Transportation continued heavy with dressed lumber, pulpwood, and coal high among commodities being moved. Wholesale and retail trade were active in the larger centres, with a general stimulation credited to the forthcoming opening of schools. A wide-spread scarcity of experienced office and institutional help existed.

Harvesting and threshing were nearing completion in Ontario, and despite the prevailing scarcity of farm labour general throughout the province, it seemed evident that a good crop had been garnered. The labour shortage had been aggravated by the contemporary harvest of a good peach crop, tomatoes, cucumbers and tobacco. In many instances, women, students, men from military camps and volunteers were assisting with harvest operations to an inordinate degree. The logging industry, attempting to make plans for fall expansions, was faced instead with an acute shortage of experienced bushmen which threatened to curtail operations. Mining companies throughout the whole of Northern Ontario were experiencing a pressing need for skilled mine workers. Manufacturing plants continued to be very active. There was a definite shortage of skilled operators and workers of all sorts—occurring both through the expansion of the industry and the turnover to military service. Increasing readiness to put women to work was seen on the part of some industries to whom the idea is a new venture. In other cases, not only were men replaced by women, but plans for expansion embraced training programs and plant arrangements especially designed for women. Canneries, textile mills and foundries had repeatedly reported their need for skilled and experienced workers. Building construction showed emphasis mainly on war-time housing and the building of defence projects. Carpenters, labourers and painters were in demand throughout most areas, and in many places there were none to be had. Highway construction was to some extent curtailed. Some Ontario contractors operating on the Alaskan Highway have sent for former employees. Railway maintenance absorbed all labour at hand. War industries attracted many persons formerly available for hospital, institutional, hotel or domestic work. There was a serious shortage of workers for good office positions. Upgrading and the employment and training of juniors is becoming a more general policy with special reference to already organized departments.

Throughout the Prairie Provinces harvesting was well advanced and generally the crop being gathered was excellent. In some sections the acute shortage of farm help had been offset by co-operative planning and efforts on the part of farmers. In several instances, additional help had been secured from airmen giving their annual leave to the harvest work. Students, Indians and office workers have been reported of valuable assistance in areas where they were available. Logging operators, finding difficulty in securing experienced men, were hesitant to plan for the usual fall expansion. Coal mines in Alberta were faced with an acute shortage of manpower. Some muckers for hard rock

metals were sent to N.W. Territories. Work continued on the construction of the new oil wells. Manufacturing plants were very active with increasing demands for help. Sawmills report curtailing of work through shortage of logs or of labour. Acceptance of women, as replacements for men enlisting, or as expansion requirements are met, seems general. Textiles, canneries, brick, pottery and glass plants have met their need of help by placing women with some success. Construction activity was evident principally in defence plants. Occasional shortages of experienced workers, particularly of first class carpenters, were reported, and a lack of unskilled labour owing to the pressure of harvest needs. Trade in most towns showed increased activity due to the good harvest. Saskatchewan reports general and urgent need of teachers.

Harvesting was practically completed in British Columbia with a resultant lull in requests for help. Predictions of an inordinate crop of apples and peaches were causing some apprehension as other industries usurped workers released at the close of harvesting. In the area around Vernon, Japanese labour was being enrolled for the picking. Fishermen were occupied with a good catch of salmon, although pilchards were less favourable. Serious shortages of skilled and unskilled labour existed throughout the logging industry causing wide-spread concern over production as the fall season opened. Coal mines showed the most marked activity, with base metals and hard rock also busy. Prospectors were active in the tungsten area around Nelson. Of the manufacturing industries the sawmills were suffering the most from a shortage of skilled workers. The movement of men into more steady, or more remunerative employment meant that production was curtailed in some instances. Canneries and packing houses, busy with good crops of pears and peaches, were employing workers for the season. Defence projects were absorbing all construction workers; the coast projects and Prince Rupert-Terrace highway requisitioning many men. The general shift of applicants to more highly organized concerns is evidenced here again in the scarcity of hotel, restaurant, trade and domestic help.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

INFORMATION formerly presented in this article concerning applications, vacancies and placements made by the offices of the Employment Service will be found in another article entitled "Activities of Unemployment Insurance Commission," under the heading "Report of Employment and Claims Offices for July, 1942." In this section information is given concerning the number of applications for work, existing vacancies and the number of placements made through the Employment and Claims Offices of the Unemployment Insurance Commission. The latest available information concerning the employment situation in Canada is also given in another section, under the heading "Employment conditions at the end of August."

The accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting July 1, was 13,100, the employees on their payrolls numbering 1,759,065, compared with 1,718,329 in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July was 2,225, having an aggregate membership of 372,985 persons, 1·8 per cent of whom were without employment on August 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of July, 1942, as Reported by Employers

Industrial employment at the beginning of July showed its fourth consecutive increase. Since March, some 106,500 employees have been taken on by the co-operating establishments, a number substantially exceeding the gain ordinarily indicated between April 1 and July 1 in the experience of earlier years of the record, although, like the latest advance, it was not equal to that reported in the same period of 1941. The 13,100 establishments furnishing information to the Dominion Bureau of Statistics at July 1 had a combined working force of 1,759,065 men and women, as compared with 1,718,882 in their last return. This was a gain of 40,183, or 2·3 per cent. As is customary, the July 1 increase was smaller than that at June 1, the date on which is usually indicated the greatest expansion of the year; normally, the general movement continues steadily upward until the maximum volume of employment is reached at September 1 or October 1, more frequently at the latter. In 1939 and 1940, however, the peak of activity for the year was recorded at November 1, while in 1941, the high was reached at December 1. If the usual seasonal pattern is followed, it seems probable that the next few reports will reflect a further considerable flow of available labour into the regular channels, quite apart from the demand for workers in the war industries. The monthly surveys will not, however, reflect the movement into agricultural work, except insofar as employment in other industries may consequently be curtailed.

The crude index number of employment, based on the 1926 average as 100, rose from 171·7 at June 1, 1942, to a new maximum of 175·7 at the beginning of July, when it was 11·6 per cent higher than at the same date of last summer. The seasonally-adjusted index, computed upon the experience of the years 1929-1937, showed a slight gain, rising from 171·7 at June 1, to 172·4 at the beginning of July.

There was an unusually large seasonal increase in manufacturing at the date under review, 18,800 persons being added to the reported working forces. The advance took place mainly in the production of durable goods, which absorbed over 16,200 of the above mentioned number. Construction and transportation also showed considerable improvement, although the expansion was on a scale rather below-average in the experience of other years of the record. Logging was brisker in some of the provinces and slacker in others, showing a slight increase in the Dominion as a whole. Mining afforded rather more employment, particularly in the extraction of coal. In services, there was also a moderate advance which, however, was smaller than that usually indicated at the beginning of July. Trade, on the other hand, reported a contra-seasonal decline.

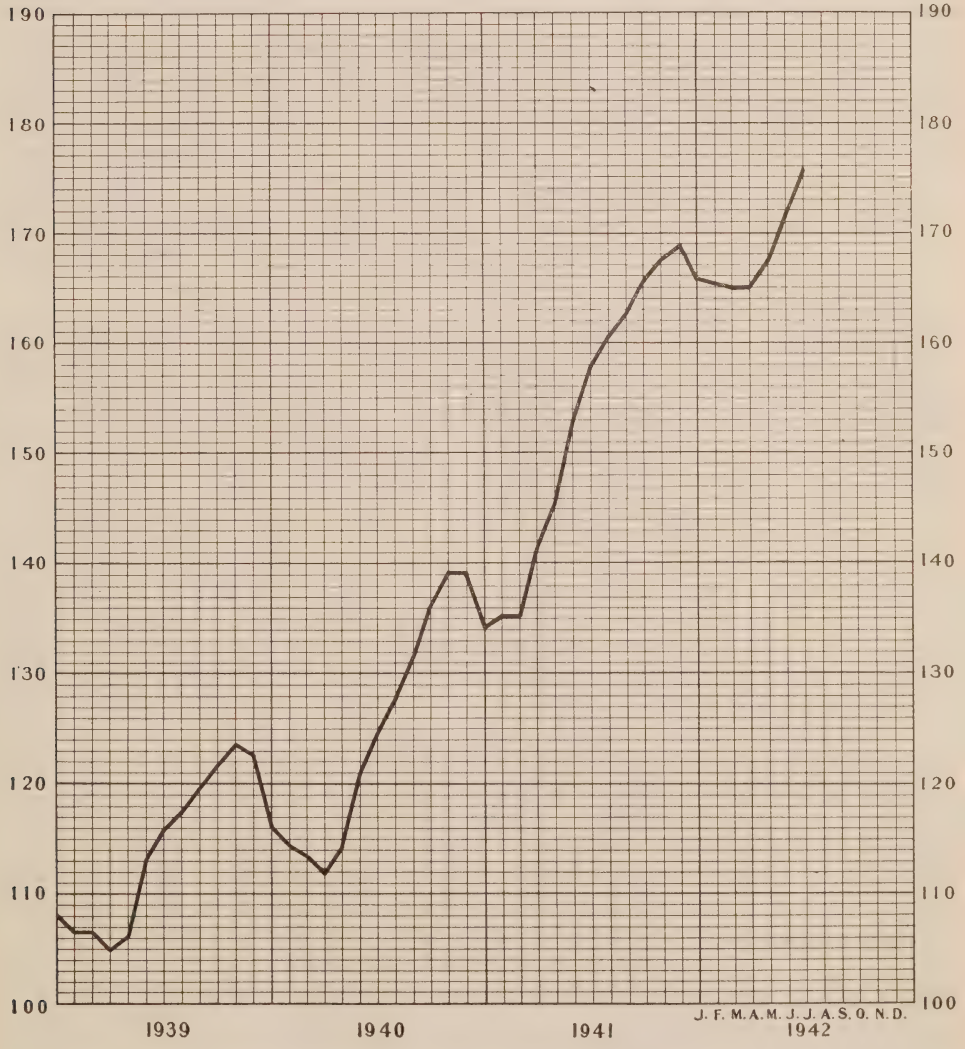
Within the manufacturing division, the largest gain was in iron and steel, in which approximately 11,500 additional persons were employed by the co-operating plants. The lumber, food, non-ferrous metal and certain other classes also recorded heightened activity, but leather, textile and tobacco factories showed considerable curtailment, chiefly of a seasonal character. The production of electrical apparatus for civilian use also afforded less employment.

A further increase in payrolls accompanied that in the number of employees. The reported weekly payroll was $50,224,523. This was higher by $1,747,148, or 3·6 per cent than the total of $48,477,375 disbursed by the same establishments at the beginning of June. The per capita average earnings of the 1,759,065 employees reported in the eight leading industrial groups rose from $28.20* paid on or about June 1, to $28.55 paid on or about July 1. The latter was four cents lower than the average at May 1, but was otherwise the highest in the record, which commenced with June 1, 1941. If the statistics for the finance industry are included in the general totals, the survey shows that the 1,822,250 persons in recorded employment at July 1 received the sum of $52,127,109 in weekly earnings, as compared with that of $50,391,110 paid on or about June 1, to 1,782,272 employees. The inclusion of the data for financial institutions raises the Dominion average per employee to $28.61 at July 1, as compared with the corresponding average of $28.27 at June 1.

A comparison of the movements of employment and payrolls in the last 12 months shows that an increase of 11·6 per cent in the index number of employment for the eight leading industries has been accompanied by an increase of 25·1 per cent in the recorded weekly payrolls.

The Course of Wartime Employment

The extent of the seasonal fluctuations in many Canadian industries tends to vitiate the value of comparisons of employment as at different parts of the year. This seasonal factor continues to influence comparisons of the levels presently existing with those in-



* Revised from $28.24.

dicated at the opening of the war; accordingly, the present report deals only briefly with the changes in the volume of employment indicated at July 1, 1942, as compared with September 1, 1939.

During the first thirty-four months of the war, there has been unprecedented expansion in industrial activity; the interruptions in the generally upward movement have been almost wholly due to seasonal contractions in the divisions peculiarly subject to such influences. Although these influences have for some months lowered employment in a number of groups in both manufacturing and non-manufacturing classes, the general index has risen by 46·9 per cent between September 1, 1939, and July 1, 1942. The importance of this gain is emphasized by comparison with that of about 14½ per cent in the five years ending in 1939, while in the period from 1921 to 1939, the general index rose only by approximately 28 per cent. In considering the alterations in the industrial pattern of the Dominion resulting from the war, it must be borne in mind that in addition to the extremely large transfers of persons into industrial employment, approximately half a million men have been enrolled in the various

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

services. The accessions to the armed forces and to the number of wage-earners have come mainly from the following sources:—(*a*) the ranks of the unemployed; (*b*) the own-account and small-employer classes; (*c*) agriculture; (*d*) homemakers and other women, and (*e*) the adolescents who probably under normal conditions would continue at school for a year or two longer, or possibly for a lengthier period. At the other end of the scale, many older men and women are no doubt prolonging their period of service beyond the usual retirement age. The armed services, in addition to drawing upon most of the above reservoirs for recruits, have of course also absorbed very large numbers of persons from their former occupations in industrial employment.

Obviously, the demands made upon manufacturing by the war have been decidedly greater than in any other industrial division. From September 1, 1939, to July 1, 1942, the index number of employment in factories rose by 81·7 per cent while the general increase in the non-manufacturing groups, in spite of considerable seasonal curtailment in some branches (notably construction), was 11·9 per cent.

The durable goods industries have shown especially impressive gains; the index number in this class has risen from 100·4 at September 1, 1939, to 252·3 at July 1, 1942, or by 151·3 per cent. The number of persons employed in the manufacture of "heavy" goods constituted 54·7 per cent of all those engaged in manufacturing at July 1, 1942, when the proportion greatly exceeded that of 40 per cent reported in the durable goods industries at the outbreak of hostilities.

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at July 1, 1942, by the Co-operating Establishments and Aggregate and Per Capita Weekly Earnings of such Employees, together with Index Numbers of Employment and Payrolls as at July 1 and June 1, 1942, and July 1, 1941, based on June 1, 1941, as 100 p.c.

Geographical and Industrial Unit	Number of Employees reported at July 1, 1942	Aggregate Weekly Payrolls at July 1, 1942	Per capita Weekly Earnings at July 1, 1942	Index Numbers of Employment			Index Numbers of Aggregate Weekly Payrolls		
				July 1 1942	June 1 1942	July 1 1941	July 1 1942	June 1 1942	July 1 1941

[1] This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

*Adjusted.

The non-durable goods class has also shown important expansion during the period of the war, the index rising from 126·6 at September 1, 1939, to 176·1 at July 1, 1942. This was an increase of 39·1 per cent. Employment in these industries is ordinarily quieter in the early part of the summer than it is later on when the active season is under way in certain industries, notably food preserving. In spite of this factor (which also operates in the case of some lines in the durable goods category), employment in the large majority of manufacturing industries, was considerably brisker at the latest date than it was at September 1, 1939.

Employment in the non-manufacturing group as a whole was, as already stated, 11·9 per cent higher at July 1, 1942, than at September 1, 1939. Normally, employment in construction and certain other classes is lower at July than at September 1, so that this percentage of increase should, in the ordinary course of events, continue to rise in the next two reports. The following are the percentage increases in the index numbers in the indicated industries in the first thirty-four months of the war; logging, 181·6 per cent; mining, 3·6 per cent; communications, 21·1 per cent; transportation, 20·1 per cent; services, 21·8 per cent and trade, 13·3 per cent. In construction as a whole, on the other hand, there was a loss of 9½ per cent. In building, the increase of 83·9 per cent at July 1, 1942, as compared with September 1, 1939, largely resulted from war-time requirements. There was also a gain of 31 per cent in this comparison in the staffs of railway construction and maintenance departments. On the other hand, highway construction showed a large decline from September, 1939, the index being lower by 46½ per cent. The loss was partly seasonal in character, but was also due to the established policy of postponing all but essential work until after the war, while in 1939 a considerable program of road work for the relief of unemployment was in progress.

Statistics of Payrolls

The present tabulation* of statistics of weekly payrolls is the seventeenth in the record, the first material of the kind in the Dominion having been collected with the returns on employment for April 1, 1941. Mainly because the information received in response to the first two inquiries was incomplete, the data for April 1 and May 1, 1941, have been disregarded, so that the record is considered as having commenced with the

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

material for June 1, 1941. The statistics of the present report are preliminary.

At the beginning of July, the sum of $50,224,523 was disbursed in weekly earnings to the 1,759,065 persons reported as employed by the 13,100 establishments in the following main industrial groups: manufacturing, logging, mining, communications, transportation, construction and maintenance, services and trade. This was the highest weekly total yet recorded. The per capita average, at $28.55, was higher by 35 cents than that at the beginning of June. The latest average is four cents lower than the maximum figure recorded at May 1, when the number of employees reported was considerably less;

[1] The relative weight shows the proportion of employees reported in the indicated industry, to the total number of employees reported in Canada by the firms making returns at the date under review.

* Revised as a result of a change in classification.

ordinarily, an increase in the personnel tends to reduce the per capita averages, those newly employed being usually taken on at the lower rates of pay. However, the changes in the industrial composition of the workers included in the surveys have tended, even in this brief period, largely to counteract this tendency.

In order to have a basis upon which to compare the reported earnings over a lengthening period, index numbers of weekly payrolls are being currently prepared; these are calculated upon the amounts paid on or about June 1, 1941, by the co-operating employers at 100 per cent. This basic period is obviously not entirely satisfactory, largely because of its brevity; greater experience with the current statistics of earnings may also result in improved methods of handling. Although comparison with information compiled elsewhere in the Bureau provides evidence that the current statistics of payrolls, like those of employment, are thoroughly representative, they must nevertheless in the present stage of their development be regarded as subject to revision.

The following table shows the movements of employment and payrolls in the eight leading industries, and in manufacturing as a whole, in the Dominion in the period of observation. The index numbers of employment have been converted from their original base, 1926=100, to June 1, 1941, for comparison with the index numbers of payrolls.

factors, of which the most important are (1) the growing concentration of workers in the heavy industries, where rates of pay are above the average, and in addition there is in many cases a considerable amount of overtime work and (2) the extension of the system of paying a cost-of-living allowance to many workers; in some cases, this cost-of-living bonus has been enlarged since its institution. In certain cases there have also been increases in the wage-rates. The dilution of labour, which has been a factor of growing importance in the situation in recent months, has tended to prevent the average per capita earnings from showing an advance which is in proportion to that shown in the index of aggregate payrolls. Thus the latter has risen by 30 per cent, while the index of per capita earnings has advanced by 13·1 per cent in the fourteen months of observation.

The growth in employment and payrolls in manufacturing has been substantially greater than that generally indicated in industry as a whole. Where the number employed in factories has risen by 24·7 per cent between June 1, 1941, and July 1, 1942, the index of their earnings has gained by 42·1 per cent in the same interval. The factors mentioned above as influencing the all-industries statistics operate with greater force in the case of manufacturing.

INDEX NUMBERS OF EMPLOYMENT AND PAYROLLS, BASED ON JUNE 1, 1941=100, TOGETHER WITH PER CAPITA WEEKLY EARNINGS

* Revised.

Thus between June 1, 1941, and July 1, 1942, an increase of 14·9 per cent in employment has been accompanied by that of 30 per cent in the reported payrolls. As has been stated in previous reports, the much greater advance in the index of earnings than in that of employment is due to various

The increases in employment and payrolls in plants turning out durable goods during the period of observation have been particularly noteworthy; the former has risen to 137·0, and the comparable earnings figure to 160·3. In the non-durable goods class, the July 1, 1942, index number of employment

stood at 113·5 per cent of the June 1, 1941, figure, and that of payrolls, at 123·0.

In considering the considerable variations which are found to exist in the average earnings of those employed in the different industrial classes, it must be borne in mind that the sex distribution of the workers employed in different classes is an important factor, being also frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or over-time may also influence considerably the reported aggregates and averages.

Employment and Payrolls by Industries

The payroll of $31,829,941 disbursed on or about July 1 for services rendered in manufacturing establishments during the week preceding, represented a pay envelope of $29.17 for the average worker. This per capita figure has only once been exceeded in the fourteen months for which the current statistics are available, viz. by that of $29.19 indicated at May 1, 1942. In the intervening weeks, there has been a considerable increase in employment, a factor which ordinarily tends to reduce the per capita average, those newly added to the staffs usually being taken on at the lower rates of pay.

Based on the amounts paid in weekly salaries and wages by the co-operating establishments on or about June 1, 1941, as 100, the index of payrolls at July 1, 1942, stood at 142·1, as compared with 137·6[1] at June 1, 1942, and 103·6 at July 1, 1941. The increase of 37·2 per cent in the reported payrolls at the date under review as compared with twelve months earlier, considerably exceeds that of 21·5 per cent in the year, in the number of persons employed by the co-operating manufacturers. As elsewhere given, the main reasons for this disparity are, first, the growing concentration of workers in the more highly-paid heavy industries, together with a considerable amount of overtime work for such classes, and secondly, the wider application of the system of meeting the increased cost of living by the payment of a bonus under the terms of P.C. 8253 of October 24, 1941. The importance of the first of these factors is emphasized by the fact that the July 1 index number of payrolls in the durable goods group stood at 160·3, or 52 per cent higher than at the same date of 1941, while that in the non-durable goods, at 123·0, showed an increase of not quite 21 per cent; the index of employment in the heavy industries in the same period has risen by 33 per cent as compared with gain of nearly 11 per cent in that for the light manufacturing industries.

During the period for which statistics of payrolls are available, there have been especially noteworthy increases in the salaries and wages distributed in the non-ferrous metal, chemical, iron and steel, miscellaneous manufactured products, electrical apparatus and equipment and beverage industries. These gains have been associated with important advances in employment; in most instances, however, the percentage rise in the latter has been proportionately less than that in the payrolls, with the result that the per capita earnings in these industries are higher than they were at the beginning of July, 1941. This statement, indeed, applies to the majority of manufacturing classes.

Logging.—There was a small contra-seasonal increase in logging, 259 men having been taken on by the 436 reporting employers, bringing their staffs to 50,387 at the beginning of July. The advance took place largely in the Maritime provinces; there were moderate gains in Ontario, while activity in Quebec and the four Western provinces was curtailed. A decline had been indicated at the beginning of July, 1941, when employment was in decidedly smaller volume. The latest index of employment was higher than in any other July for which information is available.

The weekly payrolls distributed at July 1 by the co-operating firms amounted to $1,086,680, as compared with $1,035,186 at the beginning of June. The per capita average earnings at the latest date were $21.57, as compared with $20.65 paid on or about June 1. In considering these figures of aggregate and average earnings, it must be recalled that they do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations. The index number of payrolls in logging has risen by 23·9 per cent since the basic period used in preparing the payroll indexes, while that of employment has risen by 7·3 per cent in the same fourteen months.

Mining.—Statements were received from 431 mine operators with 81,360 employees as compared with 80,887 at the beginning of June. There was moderate improvement at the date under review in all branches of mining, that in the extraction of coal being greatest. Employment was a little quieter than at the beginning of July, 1941, although the trend had then been downward.

[1] Revised.

The payrolls reported at the latest date amounted to $2,740,871, a figure which was lower by $47,217 than the weekly total reported at the beginning of June. The per capita average at July 1 was $33.69, being lower by 78 cents than the average at June 1. The loss in earnings took place very largely in coal-mining in the Maritime Area, where operations in some cases were temporarily suspended during part of the pay period under observation. Although the index of employment was 1·5 per cent lower at the date under review than at July 1, 1941, the latest index of aggregate earnings, (106·8), was a few points higher than that of 101·6 at the beginning of July of last summer.

Communications.—The trend of employment in communications continued seasonally upward; the gain approximated the average indicated at July 1 in the experience of the years since 1920. Telegraphs and telephones both reported larger working forces. The employees of the co-operating communication companies numbered 28,225, whose weekly earnings, paid on or about July 1, aggregated $785,141; at the beginning of June, the staffs of the same establishments had included 27,745 men and women, and the payrolls were $777,108. The increase of 1·7 per cent in the personnel was accompanied by that of one per cent in the recorded salaries and wages. This difference in the percentage of gain resulted in a lowering of the per capita average earnings, which fell from $28.01 at June 1, to $27.82 at the beginning of July. Based on the 1926 average as 100, the latest index of employment was 105·7; this was six per cent higher than at July 1, 1941. The index number of earnings in the twelve months has risen by 10·8 per cent.

Transportation.—Further advances were indicated in transportation, there being greater activity in the local, steam railway and shipping and stevedoring divisions. The general percentage increase, however, was slightly smaller than usual, being substantially less than that indicated at July 1 in 1941. The index of employment then stood at 103·7, as compared with the latest figure of 108·1. A total of 559 employers and branches in the transportation group reported a combined staff of 136,170 persons, as against 134,123 at the beginning of June.

The reported earnings rose from $4,645,675 at June 1, 1942, to $4,754,568 at the first of July, an increase of 2·3 per cent, while that in employment was 1·5 per cent. The per capita earnings stood at $34.92 at July 1, as compared with $34.64 at the beginning of June. In the period of observation, the index of aggregate earnings in the transportation industries has risen by 20·2 per cent, accompanying a gain of nine per cent in the index number of employment in the same period.

Construction and Maintenance.—Considerable advances of a seasonal character were indicated in construction and maintenance, there being improvement in all three branches —building, highway and railway. The percentage increase in the number of employees, however, was not quite equal to the average gain at July 1, according to the experience of earlier years. Statements were tabulated from 1,483 contractors, whose staffs aggregated 173,622. This was an increase of 18,103 employees, or 11·6 per cent from June 1. The index number, at 137·7 per cent of the 1926 average, was 8·1 per cent lower than at July 1, 1941, when the improvement indicated had been on a smaller scale.

The weekly earnings of the persons employed by the co-operating contractors were given as $4,505,417 at the beginning of July, an increase of 14·4 per cent over the sum of $3,939,270 paid on or about June 1, when the payrolls in some cases had been lowered by the observance of the Victoria Day holiday. The per capita average rose from $25.33 at June 1, to $25.95 at the beginning of July. Although employment in construction, as already stated, was quieter at July 1, 1942, than at the same date of last summer, the index of payrolls in the group as a whole was 7½ per cent higher, standing at 116·1, as compared with 108·0 at the beginning of July, 1941.

Services.—The seasonal increase in employment in services at the date under review was below average for July 1 in the experience of other years of the record. Nevertheless, the index number, at 184·8, was five points higher than at the beginning of July a year ago. Statements were received from 617 establishments, where employees aggregated 41,179, as compared with 40,250 in the preceding month. This was an increase of 2·3 per cent, while the reported earnings, at $711,365, were greater by 2·9 per cent than at June 1.

The index number of earnings was 12 per cent higher at the latest date than at the same date of last summer, an increase which was accompanied by that of 2·8 per cent in the index of employment. The per capita average earnings, at $17.27 at the beginning of July, were 10 cents higher than at June 1. At July 1, 1941, the average was $15.86. In this industry, as in logging, attention must be drawn to the fact that many of those employed in hotels and restaurants receive board

and lodging as part of their remuneration; the latter group constituted some 61 per cent of the total in the service division as a whole.

Trade.—Employment in retail trading establishments showed a contra-seasonal decline at the beginning of July, when there was a minor gain in wholesale houses. The 1,199 employers in the trade group had a staff of 156,842 men and women, as compared with that of 157,754 in their last report. The weekly earnings of the persons in recorded employment amounted to $3,810,540 at July 1, as compared with $3,793,851 paid on or about June 1; the increase in salary and wage disbursements, accompanying the reduction in the number of employees, partly resulted from the fact that the observance of the Victoria Day holiday had lowered the payrolls disbursed at June 1. The per capita average earnings at July 1 were $24.30 for service rendered in the last week of June, being 25 cents higher than the preceding average.

The latest index number of employment in trade was 152·8, on the 1926 base; this was lower by 3·6 per cent than that indicated at the same date in 1941, but there was an increase of 1·7 per cent in this comparison in the index number of payrolls.

Finance.—Information received from 757 banks, trust and insurance companies and other financial institutions showed a decrease of 205 in the number of their employees, which declined from 63,390 at June 1 to 63,185 at July 1. The weekly earnings at the latter date amounted to $1,902,586, giving a per capita weekly average of $30.11, as compared with $30.19 in the last report. Employment in financial institutions was greater by 5·9 per cent then at July 1, 1941, while the index number of earnings was higher by 10·8 per cent.

If the statistics from financial institutions be added to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries, the total number of persons in recorded employment at July 1 was 1,822,250 in 13,857 establishments; their earnings amounted to $52,127,109, a per capita average of $28.61. The June 1 figure of employment was 1,782,272 persons, for whom the weekly payroll was $50,391,110, a per capita average of $28.27. The inclusion of the figures for the finance group lowers the July 1 index of employment in the eight main industrial classifications from 175·7 to 173·1; at June 1 the figure without finance was 171·7, and 169·3 when data for such institutions are included. At July 1, 1941, the general index was 157·4 without finance, and 155·3 when the group was included.

Employment and Payrolls by Economic Areas

All provinces except Saskatchewan showed general gains in employment at the beginning of July; the reported payrolls were also higher. Especially large increases in both cases were indicated in Nova Scotia, Quebec, Ontario and British Columbia. In six of the provinces, the gains in the salaries and wages disbursed were relatively greater than those in employment, Prince Edward Island, Nova Scotia and Manitoba being the exceptions; as a result, the average per capita weekly earnings at July 1 exceeded those paid at June 1, except in the three areas just enumerated.

In all provinces, employment and payrolls were considerably greater at the date under review than at the beginning of July, 1941. The level of employment in Quebec, Ontario, Manitoba, Alberta and British Columbia was also higher than in any other month of the record.

Maritime Provinces.—Statements were tabulated from 940 establishments in the Maritime Provinces, whose employees numbered 132,723 at the first of July, as compared with 124,383 in their last report. This increase of 8,340 persons, or 6·7 per cent, was above average for the time of year. The index of employment, at 177·2 was higher than at the beginning of any other July in the record of 21 years, being 8·1 per cent above that at July 1, 1941. There were important gains at the date under review in Prince Edward Island, Nova Scotia and New Brunswick.

The weekly earnings reported at July 1 amounted to $3,251,173, being 3·3 per cent greater than the payrolls disbursed by the same firms at June 1. Since this gain was proportionately smaller than that in employment, there was a decline in the per capita weekly average, which stood at $25.29 at June 1, and at $24.50 at the date under review. The falling-off took place partly in coal-mining, where it was due in the main to the temporary suspension of certain operations, while expansion in employment in industries in which earnings are relatively low, also contributed to the decline. In the last twelve months, the index of payrolls in the Maritime Area has risen by 23·7 per cent, while that in employment has gained by 8·1 per cent.

Logging, construction and manufacturing showed considerably greater activity at the date under review. There was also improvement on a smaller scale in communications and services, while in trade, mining and transportation the trend of employment was unfavourable. The declines in the first two of these three were relatively small, but that in transportation was substantial, being seasonal in character. Within the manufacturing indus-

tries, the greatest gains were in iron and steel, lumber, pulp and paper and animal food products, while chemical factories were quieter.

For July 1, 1941, statistics were tabulated from 888 firms employing 122,589 men and women, an increase of 8,567 as compared with their employees at June 1.

Quebec.—Further impressive gains were indicated in Quebec, where the 3,319 employers furnishing data reported a working force of 546,857 men and women, an increase of 12,700 persons, or 2·4 per cent, over the preceding month; the weekly salaries and wages disbursed at July 1 were reported as $14,611,542, being 3·5 per cent higher than at June 1. Despite the fairly widespread observance of the St. Jean Baptiste holiday in Quebec, the per capita average earnings rose from $26.44 at June 1, to $26.72 at the beginning of July. The latest index of employment, at 187·1, was 15·6 per cent above that at the same date of last summer, while there was a gain of 30·6 per cent in this comparison in the index of payrolls.

The greatest expansion in Quebec at the date under review was in construction, in which the co-operating firms had enlarged their staffs by 8,460 persons from June. There was also a considerable gain in manufacturing, together with smaller additions to the personnel in transportation, mining, services and trade. Logging, on the other hand, was quieter. Within the manufacturing group, the most noteworthy increase was in iron and steel factories, which absorbed some 3,100 additional workers. The non-ferrous metal, lumber and pulp and paper divisions also reported considerably heightened activity, while there were smaller gains in certain other industries. On the other hand, textile and leather plants were seasonally slack, there was also a slight falling-off in vegetable food factories.

At July 1, 1941, 3,149 establishments had reported a personnel of 471,187 men and women; as compared with 459,025 at June 1, this was an increase of 2·6 per cent.

Ontario.—For the sixth consecutive month, the trend in Ontario was upward. The percentage advance at July 1 approximated the average, but was smaller than that indicated at the same date of last summer. Statistics were tabulated from 5,648 employers, whose staffs aggregated 735,371 persons, 10,861, or 1·5 per cent more than at the beginning of June, 1942. The payrolls distributed at July 1 increased by $769,320, or 3·6 per cent, to $22,084,285. The per capita average at the latest date was $30.03, as compared with $29.42 at June 1, 1942, and $27.04 at the beginning of July, 1941. The index of employment, at 181·1, reached a new maximum at the latest date, being 9·6 per cent higher than at July 1, 1941, while the index of earnings was 21·6 per cent higher than a year ago.

Most of the increase in employment at the beginning of July took place in manufacturing, in which the co-operating establishments enlarged their personnel by over 8,000 men and women, of whom nearly 4,000 were taken on in iron and steel factories. There were also important seasonal gains in the food industries; lumber, non-ferrous metal, miscellaneous manufacturing and some other classes likewise reported considerable additions to their payrolls, while the tobacco, electrical apparatus, textile, pulp and paper and rubber groups were quieter. The losses in some cases were seasonal in character.

The 5,438 firms furnishing returns for July 1, 1941, had a working force of 670,354 persons, as compared with 656,597 in the preceding month. The increase was thus nearly 13,800, substantially exceeding that reported at the date under review. As already stated, the index number then, however, was several points lower than at July 1, 1942.

Prairie Provinces.—There was important expansion in employment in Manitoba and Alberta, accompanied by increased disbursements in salaries and wages. In Saskatchewan, on the other hand, industrial employment showed a minor decline, most of which took place in logging, possibly as a result of the demand for agricultural workers. The payrolls reported in Saskatchewan were rather higher than at June 1.

The 1,811 firms supplying data in the Prairie area had a staff of 188,597 persons at July 1, whose earnings in the week preceding, had amounted to $5,385,898, a per capita average of $28.56, as compared with $28.49 paid on or about June 1. A comparison of the statistics with those for July 1, 1941, shows that there was an increase of 5·2 per cent in the number of persons in recorded employment, accompanied by that of 15·8 per cent in the index of aggregate weekly earnings.

Construction, transportation, manufacturing, mining, communications and services reported considerable advances in employment, together with the distribution of larger sums in salaries and wages. In trade and logging, on the other hand, employment was quieter.

The 1,776 employers whose statistics were tabulated at July 1, 1941, had a personnel of 179,271, as compared with 173,529 at June 1, 1941.

British Columbia.—There were continued important gains in employment and payrolls in British Columbia. The 1,382 co-operating establishments reported 155,517 employees at July 1, whose payrolls in the last week in June amounted to $4,891,625; at June 1, these firms had a staff of 149,946 persons, earning $4,600,403 in the week preceding. The latest index of employment, at 167·9, was the highest in the record, exceeding that at July 1, 1941,

by 20·6 per cent. The index of payrolls in the twelve months showed an advance of 38·8 per cent.

A large proportion of the expansion at the beginning of July, 1942, took place in manufacturing, in which the gain in iron and steel works was particularly noteworthy. There were also increases in employment on a smaller scale in the food, lumber and non-ferrous metal groups, while textiles were seasonally quieter. Among the non-manufactusonally quieter. Among the non-manufacturing industries, transportation reported a considerable increase, and smaller gains took place in communications, construction and trade. On the other hand, services, logging and mining were quieter.

The 1,317 firms furnishing statistics for July 1, 1941, had employed 128,539 persons, as compared with 124,747 in the preceding report. The per capita weekly average earnings of such employees had been $27.28, as compared with the latest average of $31.45, which is the maximum in the period of observation.

Employment and Payrolls by Cities

Employment in each of the main industrial centres for which statistics are currently tabulated showed an upward movement; the gains ranged from 0·1 per cent in Winnipeg and 0·9 per cent in Montreal, to 2·9 per cent in Windsor and 6·1 per cent in Vancouver. Except in Quebec, where the observance of the St. Jean Baptiste holiday lowered the earnings, the salaries and wages disbursed in these centres were also higher than those reported at the beginning of June. In Montreal, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver, the increases in the payrolls were proportionately greater than those in the number of employees, so that the per capita averages in those cities also advanced. In Quebec and Windsor, on the other hand, there were declines in this comparison. The loss in the former, as already stated, was largely due to the observance of the holiday, while that in Windsor was associated with the employment of considerable numbers of new workers, usually taken on at the lower rates of pay.

Montreal.—There was a further rise in industrial activity in Montreal. This took place in the non-manufacturing classes, mainly in transportation and construction. There were also small additions to the personnel in hotels and restaurants and in trade. On the other hand, employment in manufacturing showed a decline on the whole; increases in rubber, chemical, non-ferrous metal and iron and steel plants were rather more than offset by reductions in leather, vegetable food and textile factories. The losses were largely seasonal in character.

A combined working force of 255,297 men and women was reported at July 1 by the 1,930 co-operating establishments, who had employed 253,106 persons at June 1. This advance was substantially smaller than that noted at July 1, 1941, although it considerably exceeded the average increase at the beginning of July in the period since 1920. The salaries and wages disbursed by those employers amounted to $7,099,026, as compared with $6,975,624 paid on or about June 1. Where the index of employment has increased by 15 per cent since July 1, 1941, that of payrolls has risen by 29·3 per cent in the twelve months. The per capita average earnings were $27.81 at July 1 and $27.56 at June 1, 1942, as compared with $24.73 at July 1, 1941.

The 1,827 firms reporting at the beginning of July of last summer had employed 221,508 persons; the index then was much lower, having been 146·2, as compared with 168·2 at the date under review, when it was at the maximum so far recorded.

Quebec.—There was an increase of 1·3 per cent in the number of persons on the staffs of the firms co-operating in Quebec City, but, largely as a result of the observance of the St. Jean Baptiste holiday, there was a decline of 4·8 per cent in the reported earnings. Statements were tabulated from 227 establishments with 31,569 employees, as compared with 31,155 in the preceding month. The earnings of those in reported employment amounted to $700,798 at July 1, and to $736,228 at June 1. Slight gains in employment were indicated in transportation, construction and services, together with a rather larger advance in manufacturing. Most of the latter took place in the iron and steel group.

The 218 firms furnishing statistics for July 1, 1941, had reported a combined working force of 23,726. The latest index of employment at 221·2, (the highest in the record) was 29·3 per cent higher than that at July 1, 1941, while there was an increase of 42·7 per cent in the index of payrolls in the 12 months.

Toronto.—Industrial activity in Toronto was further accelerated at the beginning of July, when practically all the main industrial groups except trade afforded greater employment. The largest gains were in manufacturing, particularly in iron and steel, chemicals and miscellaneous manufactured products. Textile

factories, however, were somewhat quieter, as is usual in the summer. There was moderate improvement in transportation, construction and services.

The establishments making returns numbered 1,973, and their employees, 233,484, an increase of 2,545, or 1·1 per cent from June 1. The amounts distributed in weekly salaries and wages on or about July 1 were reported as $6,917,302, as compared with $6,613,594 at the beginning of June, 1942. The index of employment at the latest date, at 181·7, was higher than in any other month of the record, exceeding that for July 1, 1941, by 17·2 per cent. The accompanying gain in the index of payrolls was 29·2 per cent.

The latest average of per capita earnings was $29.63, as compared with an average of $28.64 at June 1, 1942, while the July 1, 1941, figure had been $26.91. The number of persons then employed by the 1,888 co-operating establishments was 198,718.

Ottawa.—Statistics tabulated from 249 industrial establishments in Ottawa showed a working force of 21,122 persons, a total exceeding by 339, or 1·6 per cent, that indicated at the beginning of June. The payrolls disbursed at the date under review amounted to $538,183, as compared with $512,273 at the beginning of June. The latest increase in employment took place mainly in manufacturing; most of the workers were added to the forces of plants manufacturing iron and steel, food and miscellaneous manufactured products. Construction was also more active. Trade and services, however, were quieter. The latest index of employment in Ottawa was 160·3, as compared with 153·8 at July 1, 1941. There was thus an increase of 4·2 per cent in this comparison, while the index of payrolls has risen by 13·9 per cent in the 12 months.

The 241 establishments furnishing returns at July 1, 1941, had employed 20,246 persons.

Hamilton.—The trend of employment in Hamilton continued upward. The 348 firms reporting at July 1 had a staff of 61,657, whose weekly earnings paid on or about that date amounted to $1,949,833. At June 1, 60,705 employees had received the sum of $1,839,183. The latest per capita average was $31.62, an increase of $1.32 over the average pay envelope at June 1, when the observance of the Victoria Day holiday had lowered the earnings of many individuals.

Manufacturing showed continued improvement at June 1, most of this taking place in the food and iron and steel industries; the production of electrical apparatus and equipment for civilian use, however, declined. In the non-manufactuirng classes, the number of persons employed in construction advanced, and there were slight gains in transportation and trade. Services, on the other hand, were rather quieter.

The employers furnishing data for the beginning of July of last summer had numbered 338, and their employees, 53,517. Over the 12 months there has been an increase of 15·1 per cent in the index of employment, accompanied by a rise of 31·1 per cent in the index of aggregate salaries and wages. The latest index of employment (viz. 188·8) is the highest in the record.

Windsor.—In this city, there was a contra-seasonal increase of 1,088, or 2·9 per cent in the persons in recorded employment, who numbered 39,028 at July 1. There was an accompanying gain of 2·1 per cent in the weekly payrolls disbursed by the 205 co-operating establishments which totalled $1,545,357. The per capita average was $39.60, a falling-off of 38 cents from the average indicated at June 1; the employment of a considerable number of additional persons accounted for this decline in the average, those newly-added to the forces usually being taken on at the lower rates of pay. Most of the increase in the personnel took place in iron and steel and food plants, while the changes in the remaining industries were relatively small.

At the beginning of July, 1941, the 197 reporting employers had indicated a staff of 32,251 men and women. The latest index, at 287·2, is the maximum in the record; the figure was 21·9 per cent higher than at the beginning of July, 1941, while the index number of payrolls had risen by 25·3 per cent in the same period.

Winnipeg.—Little general change was shown in Winnipeg. Manufacturing was quieter, most of the decline taking place in chemical manufacturing. Moderate increases were shown in communications, transportation, construction and trade, but these advances only slightly exceeded the reduction indicated in the manufacturing groups. An aggregate working force of 55,419 was reported by the 559 co-operating establishments, whose employees at June 1 had numbered 55,369. This increase of 0·1 per cent was accompanied by that of 0·6 per cent in the weekly earnings, which at the date under review were given as $1,489,780. The per capita average rose from $26.75 at June 1, to $26.88 at the beginning of July. Calculated on the 1926 average as 100, the index number of employment was 132·9, being higher than in any other July for which information

is available. In the last 12 months, an increase of 6·4 per cent in the number of persons in recorded employment has been accompanied by that of 14·6 per cent in the reported salaries and wages.

The 554 firms furnishing information in Winnipeg at July 1, 1941, had indicated a staff of 52,066 men and women; the per capita weekly average earnings had then been $24.98.

Vancouver.—The trend in Vancouver was upward at July 1, 1942, when the eighteenth consecutive increase in employment was recorded. Statistics were received from 606 establishments, with a staff of 74,244 employees; this was 4,261, or 6·1 per cent more than the number reported at the beginning of June. The index number reached a new high level at the latest date, when it was 209·7, or 42·3 per cent higher than at July 1, 1941. In this period of 12 months, the index of payrolls has risen by 72·0 per cent. The salaries and wages distributed at July 1 amounted to $2,291,704, showing an increase of 8·9 per cent over the weekly payrolls disbursed by the same firms on or about June 1, 1942. The per capita average advanced from $30.08 (revised) at that date to $30.87 at the beginning of July, when it was the highest in the record. The July 1, 1941, average was $25.65.

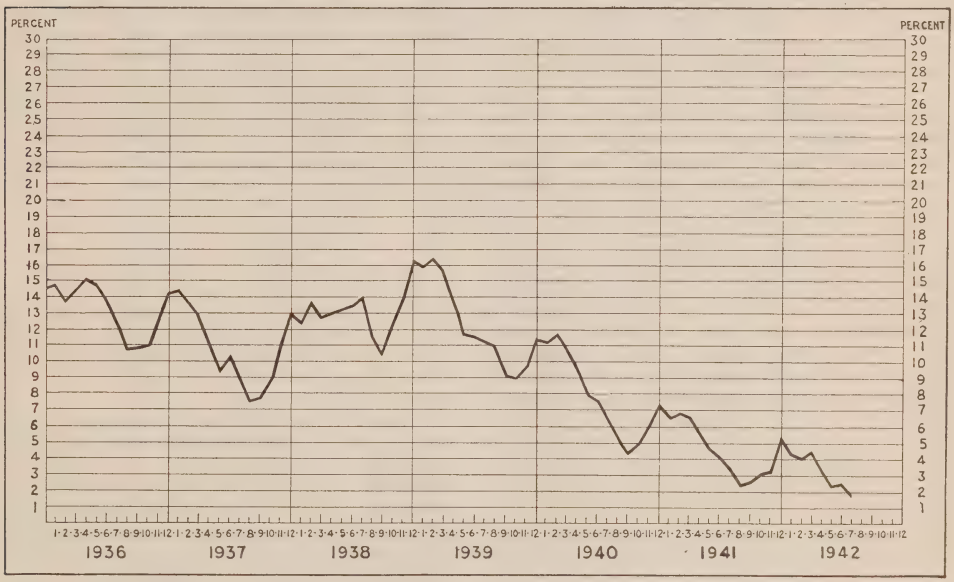
The expansion in employment at the date under review took place very largely in the iron and steel division. Food factories also showed heightened activity, while textiles were rather quieter. The non-manufacturing industries generally reported moderate improvement, the gains in transportation being the most noteworthy.

The number of persons employed by the 589 establishments furnishing statistics at July 1, 1941, was 51,943. The index number then was 147·4, many points lower than the latest figure, already given as 209·7.

Unemployment in Trade Unions at the close of July, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There were 2,225 reports tabulated in July, having an aggregate membership of 372,985 persons, of whom 6,813 or a percentage of 1·8 were unemployed, in comparison with 2·5 per cent in June and 3·5 per cent in July, a year ago. A large part of the unemployment shown during July was due to between seasons dullness, as in the garment trades, and to temporary lay offs in other lines. The percentage of unemployed members, as reported by trade unions at the close of the month was the lowest of any corresponding period since 1919 when these tabulations were placed on a monthly basis. Previous to that time the report appeared quarterly. The percentage of 1·8 was, also, the lowest for any month since September, 1919, when the same percentage was reported.



The substantially higher employment level in July was due in a large measure to the general improvement for union members in the manufacturing industries. As will be seen in table II, unemployment for these workers declined from 2·8 to 2·1 per cent. Employment for members in the iron and steel trades attained a very high level, while among garment workers the between season dullness was ending and some members were being reemployed. Noteworthy improvement was reflected in reports tabulated from unions in the building and construction trades, in which the percentage of unemployment stood at 4·2 compared with 5·8 in June. Among coal miners there was no unemployment indicated although it was 1·8 per cent in the previous month. Employment in the transportation industries also was at a very high level, showing a fractional employment advance over June. Among the smaller memberships, fishermen and lumber workers and loggers reflected little or no unemployment, in each case, a noteworthy improvement over June conditions.

Table I shows the unemployment percentages in trade unions by provinces. It will be seen that these ranged from 0·3 per cent in British Columbia to 3·8 in Quebec. The percentages of unemployment in Nova Scotia, Ontario, Saskatchewan and British Columbia were fractional, only. In comparison with the returns received in June, unemployment among New Brunswick members declined from 4·7 to 1·0 per cent. More moderate improvement occurred in Alberta, where the percentage of those who were without work was 1·3, compared with 2·6 in the preceding month. Fractional advances only, were apparent in Nova Scotia, Quebec, Ontario, Saskatchewan and British Columbia, while among Manitoba members there was a moderate recession, as the unemployment percentage increased from

1·1 to 2·2. In comparison with conditions at the close of July, 1941, a marked increase in work, was in evidence for Alberta; in this province the percentage of unemployment dropped from 6·9 to 1·3. This improvement was due, almost entirely, to the pronounced expansion in work for coal miners. A substantial advance was noted, likewise, in British Columbia, the unemployment percentage standing at 0·3 in comparison with 4·8 per cent, a year ago. The higher employment level in this province was due principally to noteworthy increases in work among fishermen, lumber workers and loggers and coal miners. Moderately better conditions were observed in Nova Scotia, Ontario and Manitoba; in New Brunswick, Quebec and Saskatchewan 0·8, compared with 1·8, in the preceding month. Conditions were fractionally better in Halifax, Montreal and Vancouver, while in Regina and Edmonton there were fractional recessions. In Winnipeg the percentage of members who were without work increased from 1·2 to 2·4. In comparison with conditions in July, 1941, Vancouver members were much better employed. Moderate increases in work, were observed in Halifax, and Winnipeg, while slight gains were apparent, likewise, in Saint John, Toronto and Regina; a fractional increase, only was observed in Edmonton. On the other head, the percentage of unemployment in Montreal increased from 2·2 to 5·0.

The accompanying chart illustrates the trend of unemployment from January, 1936, to date.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

there were fractional employment advances, only.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of those who were without work in these cities, ranged from 0·3 in Vancouver, to 5·0 per cent in Montreal. Fractional unemployment percentages, only, were apparent in Toronto, Regina, and Vancouver. In comparison with conditions at the end of June, Saint John and Toronto unions reported moderate expansion, the unemployment percentage in the former city dropping from 2·6 to 1·2; in Toronto the percentage stood at

The curve of unemployment in July, 1942, rested at a substantially lower level than in the previous month, thus indicating a noteworthy employment expansion. The point of the curve was at a distinctly lower level than that shown in July, a year ago, thus reflecting a pronounced improvement.

For the manufacturing industries 730 reports were tabulated from unions whose total membership was 196,029 persons. Of these, 4,136, or a percentage of 2·1 were without work, in comparison with percentages of 2·8 in June and 2·5 in July, a year ago. In comparison with the preceding month garment workers' unions, including men's and women's clothing workers' organizations, reflected appreciable

improvement, due to the gradual re-employment of the union members, as the new season was re-opening. As will be seen in table II, the percentage of unemployed members in the garment trades declined from 13·3 in June to 10·5 per cent in July. A pronounced decrease in the unemployment percentage was observed among workers in the unclassified manufacturing group; the percentage of unemployment declined among these workers from 23·1 to 9·6 per cent. The percentages of those without work was less than one per cent for members in the iron and steel trades and for papermakers; in both of these fractional employment increases were observed over June. A slight gain was apparent for clay, glass and stone workers; a fractionally higher employment level was observed for members in the printing trades. Among those unions whose members were reported as fully employed were soft drink workers, cigar and tobacco workers, bakers and confectioners, electric current employees, textile and carpet workers, hat, cap and glove workers, butchers, meat and fish packers, rubber, jewellery, aluminum and gas workers. The unemployment percentage for woodworkers remained unchanged at 0·4. There was a minor contraction in work for fur workers, while among leather workers there was a moderate reduction in employment, the unemployment percentage advancing from 6·3 to 9·7 pe cent. In comparison with the situation in July, 1941, a marked employment increase was apparent for members in the iron and steel trades, while among woodworkers there was likewise a much higher employment level. Moderately better conditions prevailed for members in the printing trades, among electrical current workers and among members in the unclassified manufacturing industries. On the other hand a slightly lower level was observed among papermakers, although the unemployment percentage was fractional. Among fur and leather workers there were appreciable recessions; among the former members unemployment increased from 0·6 to 3·4 per cent and among leather workers from 4·8 to 9·7 per cent.

For coal miners returns were tabulated from 54 unions having a total of 20,334 members. There was no unemployment reported in July compared with 1·8 per cent in June and 7·3 per cent in July, 1941. In comparison with conditions in June, Alberta unions reflected a noteworthy expansion, the unions in that province reported that their members were fully employed compared with an unemployment percentage of 4·0, in the preceding month. In Nova Scotia, the membership was fully employed, in comparison with 1·1 per cent of unemployment in June. A fractional gain to full employment was observed in British Columbia, while among New Brunswick members, as in June, no unemployment was indicated. In comparison with conditions in July, a year ago, pronounced employment expansion took place in Alberta and British Columbia. In Nova Scotia there was a fractional improvement, while New Brunswick members were fully employed at both dates.

In the non-metallic minerals group returns were received from 8 unions having a combined membership of 4,153 persons, of whom only 122, a percentage of 2·9 were without work, compared with percentages of 5·2 in June and 33·7 in July, a year ago.

In the building and construction trades there were 223 reports tabulated from unions. The aggregate membership of these unions was 33,084, of whom, 1,387, or a percentage of 4·2 were without work, compared with percentages of 5·8 in June and 7·3 in July, 1941. Conditions among carpenters and joiners were considerably improved; the percentage of unemployment among these members stood at 2·9, in comparison with 5·5 in the preceding month. A slightly better situation was report-

ed by unions of steam shovel men, bricklayers, masons and plasterers and plumbers and steamfitters, although among the members in the first two of these trades the unemployment percentages remained high; being 9·1 and 12·8 respectively. Among hod carriers and miscellaneous building workers and bridge and structural ironworkers there were fractional employment advances. On the other hand, a slightly lower employment level was apparent among electrical workers and painters, decorators and paperhangers, although in each case there was a very high employment level. Among granite and stonecutters there was 9·1 per cent without work, compared with 5·7 per cent in June. The percentage of unemployed members among lathers was considerably reduced, but as the membership of these unions is small this change had little affect on the building group percentage, as a whole. In comparison with the situation in July, 1941, employment among carpenters and joiners attained a much higher level. A marked employment expansion was reflected by granite and stonecutters; the unemployment percentage stood at 9·1 compared with 22·6, a year ago. As this membership is not very large, however, not many members were involved. Moderate improvement was apparent for members in the bricklayers, masons and plasterers and painters, decorators and paperhangers unions. On the other hand, moderate recessions were indicated by steam-shovel men, bridge and structural ironworkers and lathers.

In the transportation industries 889 returns were received from unions. These organizations reported a total membership of 79,019 persons, of whom 879, or a percentage of 1·1 were unemployed in comparison with percentages of 1·4 in June and 1·8 in July, a year ago. The percentage of those who were without work among navigation workers was 3·0 compared with 10·4 in June. Among teamsters and chauffeurs there was no unemployment reported, in comparison with 1·1 per cent in the previous month. The percentage of unemployment among steam-railway employees, whose returns constituted over 79 per cent of the entire group membership, and street and electric railway employees, remained unchanged at 1·3 and 0·1 per cent, respectively. In comparison with the situation in July, 1941, navigation workers were much better employed. Among steam railway employees there was a fractional employment increase. Street and electric railway employees reported the same percentage of unemployment, while teamsters and chauffeurs were fully employed at both dates.

From unions of wholesale and retail employees 10 returns were received. These embraced a total membership of 2,878 persons, all of whom were employed, in comparison with an unemployment percentage of 0·1 in both the preceding month and July, a year ago.

Reports were tabulated from 105 unions of civic employees, whose combined membership was 10,374 persons, of whom, 5, or a percentage of 0·0 were without work, compared with 0·1 in both the preceding month and July, a year ago.

Returns were received from 142 unions in the miscellaneous group of occupations. These unions had a total membership of 11,787 persons, of whom, 83, or a percentage of 0·7 were unemployed, compared with percentages of 0·7 in June and 2·1 in July, 1941. A fractional unemployment percentage was shown among hotel and restaurant employees and barbers; very slight employment increases were apparent in each case over June. Unclassified workers continued to report no unemployment, while among theatre and stage employees and stationary enginers and firemen the unemployment percentages remained low, although there were slight contractions in available work. In comparison with conditions in July, a year ago, employment increased substantially for theatre and stage employees, while moderate improvement took place for stationary engineers and firemen and hotel and restaurant employees; fractional gains occurred among barbers and unclassified workers.

Reports were tabulated from 5 unions of fishermen. The aggregate membership of these organizations was 2,689, of whom, 10, or a percentage of 0·4 were without work in comparison with 6·2 per cent in June and 17·5 per cent in July, a year ago.

Returns were received from 2 unions of lumber workers and loggers. The total membership was 2,851, all of whom were employed, in comparison with an unemployment percentage of 3·7 in June and 7·2 in July, 1941.

Table I shows by provinces the average percentage of union members who were unemployed each year from 1931 to 1941, inclusive, and also the percentage of unemployment for July of each year from 1931 to 1940, inclusive, and for each month from July, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in table I.

Building Permits Issued in Canada During July, 1942

The July report of building permits compiled by the Dominion Bureau of Statistics includes returns from 174 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 159 reported detailed operations. The remaining 15 advised that no permits had been issued during the month of July while 30 municipalities had failed to report at the close of August 12.

The total value of permits reported as issued in the month of July is $8,341,741. Revised values for the month of June include returns from 199 municipalities and aggregate $10,427,675. Reports were received from 56 of the 58 original municipalities and show a value of $7,085,076 for July. The corresponding revised value for June includes 58 returns and is $7,635,689, while the July, 1941, value was $9,610,473.

The total value of permits issued by all municipalities during the seven elapsed months of the current year is $56,565,072. The value of the 58 municipalities for the same period is $44,021,745, while their corresponding value in 1941 was $58,071,799.

During the month of July new construction of all types amounted to 73·9 per cent of the total value, while the percentage of new residential construction was 44·6.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

The British *Ministry of Labour Gazette*, July, 1942, summarizes the April-May employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at June 15, 1942 (exclusive of men numbering 24,870 who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 62,766, showing a decrease of 3,005 as compared with the corresponding total for May 11. Those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 1,861; this was a decrease of 738 as compared with May 11. Those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 3,002, showing an increase of 51 since May 11.

The corresponding figures for women and girls at June 15 were 36,474 wholly unemployed (exclusive of those, numbering 1,374 who had been classified by interviewing panels as unsuitable for normal full-time employment), 1,809 temporarily stopped, and 258 unemployed casual workers. Of the 36,474 wholly unemployed, 1,445 had been classified as unable for good cause to transfer to another area. As compared with May 11, the numbers wholly unemployed showed a decrease of 6,718, those temporarily stopped showed a decrease of 1,381, and unemployed casual workers showed a decrease of 23.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for June 15 was 71,793, as compared with 77,444 at May 11, and 191,358 at June 16, 1941.

United States

A contraseasonal increase of 257,000 in factory employment—between mid-June and mid-July, coupled with gains in all other major groups, except trade, raised the July level of employment in nonagricultural establishments in the United States to a new high according to a report issued on August 31 by the United States Secretary of Labor. The July total was 35,000 higher than in the preceding month and 2,161,000 above the July 1941 level.

Recently revised estimates of employment in nonagricultural establishments show 37,100,000 employees in July as compared with 36,665,000 in June and 34,939,000 in July 1941.

In addition to the substantial gain from June to July in factory employment, gains were reported in the Federal, State, and local government services (137,000); contract and Federal force account construction (70,000); finance, service, and miscellaneous industries (36,000); transportation and public utilities (32,000); and mining (3,000). Employment in wholesale and retail trade establishments declined by 100,000, the usual seasonal decline at this season being augmented by decreases resulting from government restrictions in certain lines of trade.

The major portion of the employment gain of 2,161,000 over the year was in the manufacturing industries which increased by 1,472,000. The Federal, State, and local government service, transportation and public utility, and finance, service, and miscellaneous groups also showed increases from July 1941 to July 1942, while in trade, mining, and contract construction fewer workers were employed in July 1942 than a year ago. The decline in trade employment was substantial, 331,000.

The number of wage earners in the manufacturing industries regularly surveyed increased by 1·8 per cent between June and July, the largest rise in any month since June 1941. Corresponding weekly pay rolls increased by $8,998,000 (24 per cent). Normally at this time of the year there is a seasonal decline of 1·5 per cent in factory employment and of 3·7 per cent in pay rolls.

The increases of 2·0 per cent in employment and 2·5 per cent in pay rolls in the durable goods group were caused almost entirely by expansion of the war industries notably shipbuilding, aircraft, instruments, electrical machinery engines, ammunition, machine tools and explosives. For the third successive month a substantial increase in employment (3·9 per cent or 14,500 workers) occurred in the automobile industry, where extensive conversion to production of war materials has taken place.

The seasonal rise in the canning and preserving industries accounted for three-fourths of the employment increase of 1·6 per cent or 76,000 in the nondurable goods group. Other sizable increases occurred in confectionery (5·6 per cent), beverages (5·1 per cent), slaughtering and meat packing (3·5 per cent), and baking (3·4 per cent). The continued expansion in the rubber tire industry in July (7·4 per cent or 4,400 wage earners) reflected increased production on government orders.

61313—7½

The July factory employment and pay-roll indexes, 141·6 and 202·4 respectively, on the 1923-25 base, exceeded all previous levels and represent increases of 8·4 per cent and 32·5 per cent over the July 1941 levels. The larger gains in pay rolls than in employment over the year reflect the increase in hours worked, overtime premiums and wage-rate increases.

A seasonal employment decline of 2·7 per cent accompanied by a pay-roll loss of 1·5 per cent was reported by retail trade establishments. All major retail groups shared in the employment decrease, the most pronounced occurring in the apparel group (9·9 per cent). In the general merchandise group the employment curtailment of 4·2 per cent was less than the usual July decline. Factors contributing to the employment decline of 6·6 per cent in retail trade between July 1941 and July 1942 were the losses of 21·2 per cent in furniture and house furnishings and 43·5 per cent in the retail automotive group.

In wholesale trade a contraseasonal loss of 0·7 per cent in employment was accompanied by a slight gain of 0·2 per cent in pay rolls. The automotive group showed an employment loss of 1·7 per cent, continuing the series of employment declines which began in the fall of 1941, and dry goods, machinery and petroleum products firms also reported declines. The most pronounced gain among the more important wholesale groups occurred in farm products (1·7 per cent).

Telephone and telegraph companies increased employment by 0·8 per cent, and street railways and bus companies continued to hire additional workers, the increase of 1·1 per cent raising the July employment level 7·7 per cent above July, 1941. Pay rolls increased 1·4 per cent over the month and were nearly 20 per cent higher than last July. Restrictions affecting expansion and repairs in the electric light and power industry were reflected in the employment loss of 0·7 per cent which continued the curtailment begun in September, 1941. The decline over the year was 8·2 per cent.

Employment increased in anthracite mines by 3·4 per cent, and in bituminous coal mines by 0·6 per cent, but pay rolls declined by 18·4 per cent and 16·3 per cent, respectively, due to decreased production caused by the observance of the miners' holiday and the 4th of July, as well as the inclusion of a large amount of vacation pay in the June pay roll.

Employment in metal mines showed no change since June but pay rolls decreased by 1·6 per cent. While employment was 3·5 per cent higher than a year ago, the pay-roll index in this industry (100·3 per cent of the 1929 average) was 26·4 per cent above July of last year. Employment in iron mines increased 1·7 per cent over the month interval, copper mines reported no change, and lead and zinc mines reported a decline of 2·4 per cent. Employment in gold and silver mines also decreased (4·5 per cent). Employment remained at the June level in quarries and nonmetallic mines but was slightly reduced in crude petroleum production (0·5 per cent).

Year-round hotels and dyeing and cleaning plants curtailed employment seasonally by 1·3 per cent and 2·4 per cent, respectively, and brokerage firms reduced personnel by 3·8 per cent. Laundries reported a better-than-seasonal employment gain of 4 per cent, and insurance companies increased their staffs by 1·4 per cent.

Wage-rate increases averaging 7·5 per cent and affecting 183,000 factory wage earners were reported by 429 establishments out of a reporting sample of about 30,000 establishments employing 7,000,000 workers. In non-manufacturing industries, the largest numbers of workers affected by wage increases were reported by street railway and bus companies, 11,804 employees; electric light and power companies, 6,575 employees; and copper mines, 4,292 workers.

The increase of 162,000 in Federally-financed construction employment in July, 1942, brought the total to the record level of 1,856,000. This was an increase of more than 1,025,000 (123 per cent) over the same month of last year.

War construction was entirely responsible for the increase in July, with the major expansion concentrated on shipbuilding and airport projects. Nine out of every 10 construction workers engaged on projects financed from federal funds were working on war projects. Only one out of every seven was employed directly by the Federal Government, the others being employed by contractors and subcontractors.

The executive service of the Federal Government in July added 171,000 employees of whom approximately 3 per cent were hired for work inside the District of Columbia. The July executive-service employment amounted to 2,401,000 or almost 75 per cent more than July of last year.

All work-relief programs showed sizeable declines in personnel in July, 1942. The WPA released 173,000 workers and the NYA released 199,000. The major factor in the NYA decline was the closing of the student-work program during the summer vacation period. The CCC decline of 58,500 reflected curtailment of the program as a result of a smaller appropriation for the new fiscal year. In July work-relief programs carried a total of 660,000 names on the rolls.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

PRIOR to the establishment of Wartime Wage Control under P.C. 8253, inspection and enforcement of fair wages and labour conditions on Government contracts was provided under P.C. 5522 of July 22, 1941 (Labour Gazette, August 1941, page 869), which empowered the Minister of Labour "to appoint any provincial official or any other person authorized to inspect labour conditions pursuant to the law of any province as his duly authorized representative for the enforcement of the fair wages and labour conditions on Dominion contracts." It also established a penalty for any person who obstructs such a representative in the pursuit of his duties.

P.C. 1774 of March 9, 1942, replaces the foregoing Order and gives recognition to the jurisdiction of the National War Labour Board which was charged in P.C. 8253 of October 24, 1941 with the administration of the fair wage and labour conditions on Government contracts, as well as the administration of the wages and cost-of-living bonus provisions of that Order. P.C. 1774 also contemplates the extension of the appointment of representatives of the Minister of Labour to include provincial wage commissions, parity committees, or other agencies whose inspection function would usefully serve the National or a Regional War Labour Board with respect to the enforcement of those matters with which such Boards are charged.

Accordingly the National War Labour Board is now furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada, which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wage Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Orders in Council of April 9, 1924, and of December 31, 1934. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On May 30, 1941, an Order in Council, P.C. 3884, was passed rescinding the schedule of minimum wage rates set out in the "B" conditions which had been in effect since December, 1934, and establishing increased rates of 35 cents and 25 cents respectively for male and female workers over eighteen years of age. It also made provision for a system of permits to employ beginners and handicapped workers at sub-standard rates, and provided penalties for non-compliance with the prescribed rates.

On October 4, 1941, P.C. 3884 was revoked by the passage of Order in Council P.C. 7679 and minimum rates were prescribed for all employees of Government contractors and subcontractors. (The full text of this Order in Council appears at pages 1226 and 1237 of the Labour Gazette for October.)

The four major changes made by the new Order are: (1) the application of the minimum rates to *all* employees of contractors and subcontractors throughout an establishment of which any part may be engaged on Government orders, and not only as previously to those employees actually engaged on Government work; (2) the addition of a new minimum wage rate of 20 cents an hour for employees under 18 years of age whose rates previously had been set by provincial regulation; (3) the authorization of special beginners' rates; and (4) the exemption from the necessity of obtaining beginners' permits unless the number of beginners exceeds a quota of 20 per cent of the total number of employees in any establishment.

Respecting contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were suspended in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. This clause relating to wages and hours in the last named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages:

The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide or except in cases of emergency as may be approved by the Minister."

This Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of con-

struction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance, or guarantee. Thus, with respect to works for the elimination of grade crossings, towards which assistance is granted from Dominion public funds under Orders of the Board of Transport Commissioners, and certain other works being carried out under agreements with the provinces which are also assisted by grant of federal funds, the same labour conditions are enforced which apply to works of building and construction undertaken for the various departments of the Dominion Government.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as in the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours, on contracts for governmental supplies and equipment the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the name, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of the opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Order in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Order in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

War Contracts

All contracts awarded by the Department of Munitions and Supply are subject to labour conditions for the protection of the workpeople concerned.

In the case of building and construction contracts, the labour conditions include fair wages schedules based on the rates current in the particular district where the work is being performed, and provide that the working hours shall not exceed eight per day and forty-four per week.

In the case of contracts for the manufacture and overhaul of aircraft, the labour conditions include one scale of minimum wage rates which has been approved for all work of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces), and a separate and higher scale for all such contracts undertaken in Western Canada (comprising the area from Fort William to the Pacific Coast). These contracts are subject also to a working week of not more than forty-eight hours, provision being made that any necessary and authorized overtime work shall be paid for at a rate of not less than one and one-half times the regular rate.

Contracts for shipbuilding and repair are all subject to labour conditions including fair wages schedules based on the rates current in the district where the work is being executed. Provision is made for the observance of working hours of not more than forty-eight per week and for a wage of not less than one and one-half times the regular rate for any overtime that is necessary and authorized by the Dominion Government inspector in the plant.

Contracts for the manufacture of equipment and supplies for the defence forces are subject to the "B" labour conditions of the Fair Wages Order in Council referred to in the introduction to this article.

Schedules Prepared and Contracts Awarded During August

During the month of August the National War Labour Board prepared, on request, 203 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into recently by the various Government departments (other than the Department of Munitions and Supply) appear in the accompanying table:—

Department	Description of Contract	Location	Name of Contractor	Date of Contract	Amount of Contract	Labour Conditions
Transport.....	Additional aerodrome development.	Scoudouc, N.B..	Dexter Construction Co., Ltd., Westmoreland Co., N.B.	July 24, 1942	$ 39,268 00	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development.	Sturdee, Sask...	W. B. Ramsay, Regina, Sask.	July 24, 1942	30,415 00	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development.	Yorkton, Sask..	W. B. Ramsay, Regina, Sask.	July 24, 1942	69,265 00	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development, E.F.T.S. & A.O.S.	Mount Hope, Ont.	Brennan Paving Co., Ltd., Hamilton, Ont.	July 23, 1942	61,005 00	"A1"—Wage Schedule.
Transport.....	Construction of water supply main	Hamlin, Sask...	Dorosz Brothers, Regina, Sask.	July 23, 1942	6,363 22	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development.	Moncton, N.B..	Rayner Construction Ltd., Toronto Ont.	July 17, 1942	133,187 50	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development B. & G.S.	Paulsen, Man...	A. N. Duff, Regina, Sask.	July 28, 1942	88,682 50	"A1"—Wage Schedule.
Transport.....	Aerodrome development, S.F.T.S. Main.	Gimli, Man.....	Bird Construction Co., Ltd., Regina, Sask.	July 28, 1942	656,755 00	"A1"—Wage Schedule.
Transport.....	Additional airport development, R.1 to Dauphin.	North Junction, Man.	A. N. Duff, Regina, Sask.	July 28, 1942	19,837 50	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development, S.F.T.S. Main.	Brantford, Ont.	Johnson Brothers Co., Ltd., Brantford, Ont.	July 29, 1942	59,237 50	"A1"—Wage Schedule.
Transport.....	Additional airport development, S.F.T.S. Main.	St. Hubert, P.Q.	Raymond McDonell & Co., Ltd., Montreal, P.Q.	July 29, 1942	169,950 00	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development, S.F.T.S. Main.	North Battleford, Sask.	W. C. Wells, Wilkie, Sask.	July 29, 1942	84,565 00	"A1"—Wage Schedule.
Transport.....	Additional airport development.	Calgary, Alta...	Dutton Bros. & Co., Calgary, Alta.	July 30, 1942	278,986 50	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development.	Shepard, Alta...	Doncaster Construction Co., Ltd., Edmonton, Alta.	Aug. 4, 1942	55,990 00	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development, S.F.T.S. Main.	Macleod, Alta..	General Construction Co., Ltd., Vancouver, B.C.	Aug. 5, 1942	63,540 00	"A1"—Wage Schedule.
Transport.....	Additional aerodrome development, S.F.T.S. Main.	Claresholm, Alta.	General Construction Co., Ltd., Vancouver, B.C.	Aug. 6, 1942	81,320 50	"A1"—Wage Schedule.

Department	Description of Contract	Location	Name of Contractor	Date of Contract	Amount of Contract	Labour Conditions
Transport.....	Development of Entrance Road to Rockcliffe Air Station.	Rockcliffe, Ont.	O'Leary's Limited, Ottawa.	Aug. 10, 1942	34,971 50	"A1"—Wage Schedule.

Stamping machine parts ...	Machine Works, Ltd.,
Mail bagging	Dominion Textile Co., Ltd., Montreal, P.Q.
Letter boxes, etc...	Galt Art Metal Co., Ltd., Galt, Ont.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Animal Foods

WINNIPEG, MANITOBA.—WESTERN PACKING CO. LTD. AND WESTERN PACKING EMPLOYEES FEDREAL UNION.

Agreement reached through conciliation by an Industrial Disputes Inquiry Commissioner, as noted on page 1006 of this issue. Agreement to be in effect from August 15, 1942, to August 15, 1943.

The Company recognizes the union as the sole bargaining agent for its members, and will not discriminate against them.

Hours: 54 per week. Overtime and all work on statutory holidays, time and one half.

Wages and cost-of-living bonus are stated to be part of this agreement, but these provisions were not shown in the agreement. One week's vacation with pay for permanent employees with two years' continuous employment. Provision is made for improvement of certain working conditions and for the arbitration of disputes.

Manufacturing: Pulp, Paper and Paper Products

ST. JEROME, QUEBEC.—ROLLAND PAPER CO. LTD. AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 455) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 106).

Agreement reached following strike reported in the LABOUR GAZETTE, June, page 673, and application for a Board under the Industrial Disputes Investigation Act, conciliation by an Industrial Disputes Inquiry Commissioner and subsequent withdrawal of the application, as noted on page 1006 of this issue. Agreement to be in effect from July 31, 1942, for the duration of the war. The wage scale to remain in effect from June 1, 1942, for 18 months.

The company recognizes the unions as representing their members. All permanent employees who have been, are, or later become union members will maintain such union membership during the life of this agreement. New employees exept those temporarily employed are to join the union.

Hours of employment for all workers not normallv to exceed 50 per week. For day workers, hours of regular employment to be as scheduled in each department; overtime to be paid for any time before 7.30 a.m. and after 5.30 p.m., after 3 p.m. on Saturdays and for all work on Sundays and holidays. For tour workers, shifts are 8 per day, shifts to rotate weekly unless changed by agreement. One week's vacation with pay for employees who have been steadily employed by the company for a year prior to June 1, 1942. In making promotions, the management will consider—first: merit, character and ability; second: extent and quality of education; third: physical fitness; fourth: length of service. Provision is made for adjustment of grievances. The wage scale attached to this agreement, dated June 1, 1942, is to remain in effect for 18 months.

MONT-ROLLAND, QUEBEC.—ROLLAND PAPER CO. LTD. AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 454).

Agreement reached in the same circumstances and with the same conciliation as in the case of the mill of this company at St. Jerome, as noted above. The terms of the agreement are the same as that at St. Jerome, with the exception of the wage scale. This wage scale also is dated June 1, 1942, and is to remain in effect for 18 months.

Construction: Shipbuilding

PORT DALHOUSIE, ONTARIO.—MUIR DRY DOCK CO. LTD. AND THEIR EMPLOYEES.

Agreement reached following application for a Board under the Industrial Disputes Investigation Act, conciliation by an Industrial Disputes Inquiry Commissioner, and subsequent withdrawal of the application, as noted on page 1006 of this issue. Agreement to be in effect from May 28, 1942, until ten days after the cessation of present hostilities.

No discrimination to be shown against any employee on account of his belonging to a union. Hours: 9 per day, 5 on Saturday, a 50-hour week; overtime at time and one half; work on Sundays and four holidays, time and one half; work on three holidays, double time. Time and one quarter to be paid for all dirty work and working in excessive heat from boilers. Basic hourly wage scale: helpers 45 cents during first three months, 50 cents during second three months and 55 cents thereafter. Apprentices to serve four years and to start at 25 cents per hour, with regular increases thereafter. A cost-of-living bonus to be paid in accordance with Order in Council P.C. 5963 of July 10, 1942, and amendments, with October 1, 1941 as the base upon which the cost-of-living shall be computed. Seniority to be considered in laying off men. Provision is made for arbitration of disputes.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the LABOUR GAZETTE, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the correction of two Orders in Council and the amendment of thirteen agreements in addition to the same amendment which was made to all twelve of the building trades agreements; these are all noted below. A request for the extension of a new agreement covering checkers and coopers engaged in connection with ocean navigation ships in the harbour of Montreal was published in the *Quebec Official Gazette*, August 29.

In addition Orders in Council were published in the *Quebec Official Gazette,* during August, approving or amending the constitution and by-laws of certain parity committees, and others approving the levy of assessments or amending previous Orders in Council in this connection, by certain other parity committees.

Manufacturing: Fur and Leather Products

FUR MANUFACTURING INDUSTRY (WHOLESALE), MONTREAL.—

An Order in Council, dated July 24, and published in the *Quebec Official Gazette,* August 1, extends the term of this agreement (LABOUR GAZETTE, September, 1940, page 970, May, 1942, page 630, and August, page 978) to October 31, 1942.

Manufacturing: Textiles and Clothing

WOMEN'S CLOAK AND SUIT INDUSTRY, PROVINCE OF QUEBEC.—

A correction in the Order in Council making this agreement obligatory (LABOUR GAZETTE, October, 1937, page 1157; May, 1940, page 496, August, page 866, November, page 1202; October, 1941, page 1314; August, 1942, page 978) sets the date from which this agreement became obligatory as at July 1, 1937.

Manufacturing: Pulp, Paper and Paper Products

PAPER BOX (CORRUGATED PAPER) MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.—

An Order in Council, dated August 12, and published in the *Quebec Official Gazette,* August 12, and corrected in the August 22 issue, amends the previous Orders in Council for this industry (LABOUR GAZETTE, April, 1942, page 483). A number of additional classes are added to the wage scale including the following minimum hourly rates after 6 months' experience: operator of stitching machine 35 cents, operator —die pressing 35 cents, stationary enginemen, 45 to 60 cents, firemen 35 cents.

Manufacturing: Non-Metallic Mineral Products, Chemicals, etc.

BUILDING MATERIALS, INDUSTRY, PROVINCE OF QUEBEC.—

An order in Council, dated July 24, 1942, and published in the *Quebec Official Gazette,* August 1, amends the Orders in Council for this industry (LABOUR GAZETTE, July, 1940, page 731: June, 1939, page 628, September, page 951; February, 1940, page 172; September, 1941, page 1159) by repealing that part of the agreement covering the ornamental iron and bronze section of the industry since ths section is now covered by a separate agreement (LABOUR GAZETTE November, 1941, page 1424.)

PAINT MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.—

An Order in Council, dated August 21, and published in the *Quebec Official Gazette,* August 29, amends the previous Orders in Council for this industry (LABOUR GAZETTE, July, 1942, page 856) by changing the weekly wage rate for stationary enginemen to $32.40 for second class, $27 for third class and $24.30 for fourth class enginemen.

Construction: Buildings and Structures

ELEVATOR CONSTRUCTORS, PROVINCE OF QUEBEC.

An Order in Council, dated August 26, published in the *Quebec Official Gazette,* August 29, extends the term of this agreement (LABOUR GAZETTE, September, 1941, page 1159, December, page 1573, June, 1942, page 738 and August, page 978) to September 30, 1942.

BUILDING TRADES, CHICOUTIMI AND LAKE ST. JOHN DISTRICT, QUEBEC AND DISTRICT, SHERBROOKE AND EASTERN TOWNSHIPS, THREE RIVERS AND DISTRICT, ST. HYACINTHE AND DISTRICT, SOREL, JOLIETTE AND DISTRICT, MONTREAL AND DISTRICT, ST. JOHNS AND IBERVILLE, ST. JEROME AND DISTRICT, HULL AND DISTRICT AND VAL D'OR AND AMOS.—

Twelve Orders in Council, all dated July 30, and published in the *Quebec Official Gazette,* August 8, amend all twelve of the existing building trades agreements by inserting in each the following paragraph: "Steam railroad companies are not governed by the present decree in the case of works ordinarily performed by maintenance men of the system who are already covered by a collective agreement with the said railroad companies."

BUILDING TRADES, MONTREAL.—

An Order in Council, dated August 26, and published in the *Quebec Official Gazette,* August 29, extends the term of this agreement (LABOUR GAZETTE, September, 1941, page 1160, December, page 1573, and August, 1942, page 978) to September 30, 1942.

BUILDING TRADES, HULL.—

A correction to the previous Orders in Council (LABOUR GAZETTE, July, 1938, page 798, November, page 1300; March, 1939, page 335, October, page 1066, December, page 1280; February 1940, page 172; March, 1941, page 334, August, page 1012, and December, page 1573) was published in the *Quebec Official Gazette,* August 15, substituting the words "concrete reinforcing steel or rod-man" for "concrete metal bracing worker."

An Order in Council, dated August 21, and published in the *Quebec Official Gazette,* August 29, amends the previous Orders in Council by changes which do not affect the summary as already given.

Transportation and Public Utilities: Water Transportation

LONGSHOREMEN (INLAND AND COASTAL NAVIGATION), MONTREAL.—

An Order in Council, dated July 24, and published in the *Quebec Official Gazette,* August 1, extends the term of this agreement (LABOUR GAZETTE, August, 1942, page 978, and July, page 856 and previous issues as noted therein) to October, 31, 1942.

Trade

HARDWARE AND PAINT STORES, QUEBEC.—

An Order in Council, dated July 24, and published in the *Quebec Official Gazette,* August 1, amends the previous Orders in Council for these stores (LABOUR GAZETTE, April, 1940, page 391, December, page 1312; January, 1941, page 70, June, page 705; June, 1942, page 739) by providing that the one week's vacation with pay is granted after one year's service (and after three years' experience in the trades.)

Service: Business and Personal

BARBERS AND HAIRDRESSERS, THREE RIVERS.—

Three amendments to this agreement (LABOUR GAZETTE March, 1942, page 353) were published in the *Quebec Official Gazette*, August 29. One amendment adds to the parties to the agreement: "Le Syndicat national catholique des maîtresses-coiffeuses des Trois-Rivières et district" (The National Catholic Union of Master Hairdressers of Three Rivers and District). Another amendment prohibits the renting or sub-letting of one or more chairs or space in a barber or beauty shop for the carrying on of the trade. The third amendment makes certain changes in hours.

BARBERS AND HAIRDRESSERS, JOLIETTE.—

An Order in Council, dated August 12, published in the *Quebec Official Gazette*, August 15, amends this agreement (LABOUR GAZETTE, November, 1941, page 1426) by making a change in the charge for one service.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE.—

An Order in Council, dated July 30, and published in the *Quebec Official Gazette*, August 8, makes a slight change which does not affect the summary as previously given (LABOUR GAZETTE, November, 1941, page 1426).

BARBERS AND HAIRDRESSERS, HULL.—

An Order in Council, dated July 24, and published in the *Quebec Official Gazette*, August 1, amends the previous Orders in Council for these trades (LABOUR GAZETTE, October, 1941, page 1316, and December, page 1573) by adding "L'Association des coiffeuses de la Cité de Hull" (The Association of Hairdressers of the City of Hull) to the parties to the agreement.

WORKMEN'S COMPENSATION IN MANITOBA AND SASKATCHEWAN

Reports of Provincial Boards

THE annual reports for the year 1941 of the Workmen's Compensation Boards of Manitoba and Saskatchewan have recently been issued. A brief summary of each appears below.

Manitoba

There were 15,812 accidents reported to the Workmen's Compensation Board of Manitoba during the year 1941. This compares with a total of 13,168 accidents during 1940. Fatal accidents numbered 42, two more than occurred during the preceding year.

The report issued by the Board shows that on December 31, 1941, the Board had on its books as in receipt of pension, 552 dependents of workmen killed in industry during the period March 1, 1917, to December 31, 1941.

The amount paid out during the year for compensation, including orders respecting Dominion Government employees and amounts transferred to General Unclassified Reserve to provide for the future payments in fatal and permanent disability cases was $1,053,023.59, as compared with $979,889.10 for the year 1940. The actual cash disbursed by the Board (less investments) amounted during 1941 to $1,163,876.04, as compared with $1,037,551.12 disbursed during the previous year.

The ascertained payroll for all classes dealt with by the Board for 1940 was $79,001,749.67, as compared with the 1939 figure of $70,463,079.03.

Accident claims were classified by causes as follows: prime movers, 114; working machines, 361; hoisting apparatus, 51; dangerous substances, 217; stepping on or striking against objects, 474; falling objects, 811; handling objects, 1,414; tools, 296; runaways and animals, 42; moving trains, vehicles, etc., 244; falls of persons, 1,008; all other causes, 270.

Saskatchewan

The twelfth annual report of the Workmen's Compensation Board of Saskatchewan states that the up-trend in the volume of industrial activity in the Province has been reflected in the increased number of accidents reported and in a growth of approximately 10 per cent in the amount of benefits paid.

During 1941 a total of 7,700 claims were reported to the Board, compared with 7,040 in 1940. On account of the 1940 claims a total of $595,457.80 was paid out by the Board, made up of $254,353.16 in compensation, $201,603.43 in pension awards, and $139,501.21 in hospital and medical aid. Not including deposit accounts, the total receipts of the Board during 1941 amounted to $491,960.43, while total expenditure, including estimate for outstanding claims, was $530,435.41, leaving an estimated deficit of $38,474.98.

The average assessment rate of the Board in 1941 was $1.25 per $100 of payroll, a decrease when compared with the rate of $1.36 in 1940.

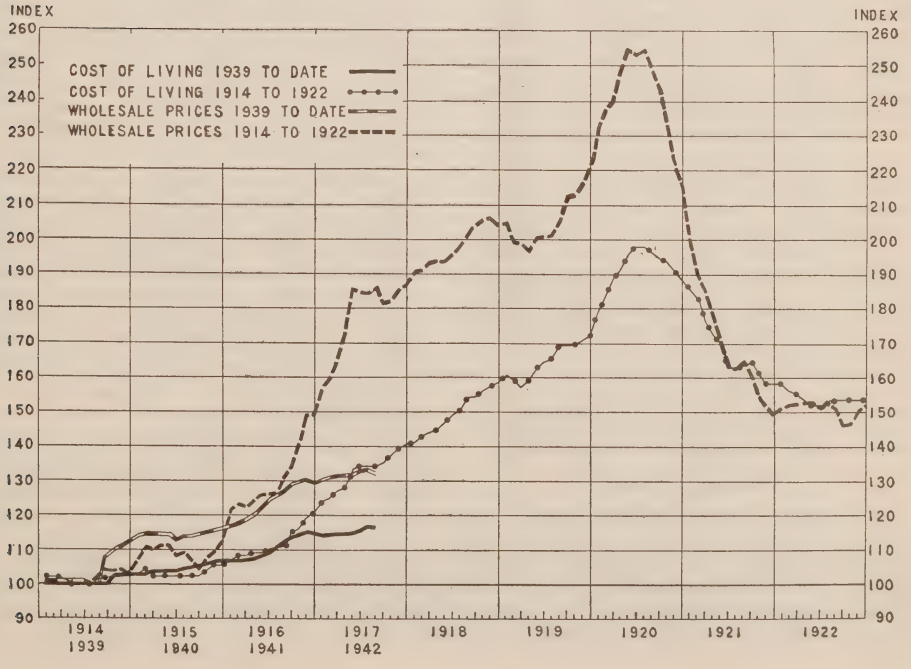
The number of employers who reported to the Board in 1941 was 5,238 as compared with 4,722 in 1940, this being an increase of 516. The amount of payroll reported during 1941, exclusive of Dominion and Saskatchewan Governments (which are not asked to estimate their payrolls) totalled $40,204,157, an increase of $2,872,483 over 1940.

Accidents were classified by causes as follows: prime movers, 148; working machines, 198; hoisting apparatus, 15; dangerous substances, 335; stepping on or striking against objects, 872; falling objects, 914; handling objects, 771; tools, 376; runaways and animals, 45; moving trains and vehicles, etc., 187; falls of persons, 906; all other causes, 1,482. Of these accidents 23 were fatal.

PRICES, RETAIL AND WHOLESALE IN CANADA, AUGUST, 1942.

Cost of Living, Prices of Staple Articles and Index Numbers.

A SLIGHT decrease in the cost of living from 117·9 to 117·7 was recorded for the beginning of August, by the official index number calculated by the Dominion Bureau of Statistics on the base period 1935 to 1939 as 100. The decline was due mainly to lower prices for beef and potatoes which more than offset advances in the prices of eggs, lemons and oranges. Besides foods the only other group to record a decrease was the home furnishings and services group. Clothing advanced fractionally while the other group indexes were unchanded. Comparative figures for the index at certain dates are 117·7 for August; 117·9 for July; 113·7 for August, 1941; 105·9 for August, 1940; and 100·8 for August, 1939. The increase between August, 1939, and August, 1941, was 16·8 per cent as compared with an advance of 34·3 per cent between July, 1914, and July, 1917, the comparable period during the last war.



After adjustment to the base 100·0 for August, 1939, as required by Order in Council, P.C. 5963 of July 10, 1942, replacing P.C. 8253 of October, 1941, the index was 116·8 at August 1, as compared with 117·0 for July and 114·6 for October, 1941. Since the establishment of price control last autumn the advance in the cost of living index was only about one eighth as much as was recorded between October, 1916, and August, 1917, the comparable period during the last war.

Foods advanced 30·5 per cent between August, 1939, and August, 1942; clothing 20 per cent; home furnishings and services, 16·7 per cent; fuel and light 13·6 per cent; rent 7·2 per cent; and the miscellaneous group 5·7 per cent.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the *Labour Gazette*, for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY 1914 AND IN AUGUST 1939-100

each issue of the *Labour Gazette* the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost-of-living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing, (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6; May, 120·9; June, 121·8; July, 123·9; August 123·5.

The accompanying chart shows the trend of the cost-of-living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The Dominion Bureau of Statistics index number of wholesale prices on the base 1926 as 100 declined from 96·1 for July to 95·6 for August. The decline occurred mainly in the vegetable products group and in the animal products group, the other groups in the chief component material classification being unchanged except for the chemicals and allied products group which recorded a minor advance. In the vegetable products group, oats, onions and potatoes were lower but a sharp increase in the price of wheat followed the setting of a price of 90 cents per bushel on August 11. Animal products declined due to lower prices for livestock which more than offset advances in the prices of eggs and milk. Comparative figures for the general index at certain dates are 95·6 for August; 96·1 for July; 91·8 for August, 1941; 82·6 for August, 1940; and 72·3 for August, 1939. The increase in the general index between August, 1939, and August, 1942, was 32·2 per cent. Canadian farm products advanced 39 per cent during the same period, consumers' goods 31 per cent and producers' goods about 33 per cent in the same period. The increase in the general index between July, 1914, and July, 1917, the comparable period during the last war was 84·2 per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of August of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

* **For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.**

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

By Order in Council P.C. 8965, dated November 21, 1941 (LABOUR GAZETTE, December, 1941, page 1462), the price ceiling established by P.C. 8527 (LABOUR GAZETTE, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (LABOUR GAZETTE, October, 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 1108. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail prices of beef averaged lower at the beginning of August than one month earlier following the reductions provided for in both wholesale and retail prices under the regulations of the Wartime Prices and Trade Board. Sirloin steak averaged 38·8 cents per pound at the beginning of August as compared with 39·6 cents at July 1, and 34·5 cents for August, 1941. Rib roast averaged 33·2 cents per pound at August 1, 34·3 cents at July 1 and 29·1 cents for August, 1941. Lamb was about one cent per pound lower at 39·3 cents per pound at August 1.

The price of fresh eggs advanced from 37·4 cents per dozen at July 1 to 39·8 cents at August 1. The price for August, 1941, was 38·4 cents per dozen. Stocks in storage at the beginning of August, fourteen and one-half

minous. (f) Higher price is for coal in sacks. (g) Natural gas used extensively. (r) Few six-roomed houses occupied mines. (v) Workingmen's houses are mostly of four and five rooms; modern, $24-$28, semi-modern, $20-$24. * In the 2 per cent are not included in the prices of fuel.

million dozen, were not materially different from those one month earlier but were about 40 per cent greater than at August 1, 1941. The production of creamery butter in July was about 3 per cent greater than in July, 1941, the cumulative total for the first seven months of 1942 was 4 per cent less than for the corresponding period in 1941. Stocks in storage at August 1 were about 20 per cent lower than one year previously. The price at August 1 was 38·9 cents per pound, at July 1, 39 cents and at August 1, 1941, was 40 cents per pound. The production of cheese was about 50 per cent greater during the seven month period than for the similar period in 1941. The average retail price was 34·6 cents per pound for August 1, 34·8 cents for July and 26·7 cents for August, 1941. Potatoes averaged 57 cents for 15 pounds for August, 60·5 cents for July and 33·2 cents for August, 1941.

Onions at 6·3 cents per pound were about 1¼ cents lower than for the preceding month. Slight increases were recorded for both oranges and lemons.

The following are the prices reported for Welsh coal, "cobbles" and "French nut" at the beginning of August, 1941: Halifax $18.50; Charlottetown $17.90; Saint John $18.50; Quebec $16.50; Three Rivers $17.25; Sherbrooke $18.75; St. Hyacinthe, $17.50; Montreal $17.75.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost-of-living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the July issue of the LABOUR GAZETTE. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 159·8 for July, showing no change from the previous month. Food prices fell 1·8 per cent due to the decrease of 8·6 per cent in the cereals group. Industrial materials and manufactures were 0.9 per cent higher, the greatest change being a rise of 10·5 per cent in coal prices.

The *Statist* index number, on the base 1867-1877=100, was 154·4 at the end of June, a decrease of 1·5 per cent for the month. Some decrease was recorded in every group except animal foods and textiles which were unchanged.

COST-OF-LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 200 at July 1, an increase of ½ of one per cent for the month. Food prices were one per cent higher, with increases in prices of milk and potatoes; miscellaneous commodities were ½ of one per cent higher, while other groups showed no change.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1926-1930=1000, was 1413 for May, an advance of 4 per cent for the month. Every one of the seven main groups of commodities was included in the general advance.

COST-OF-LIVING.—The official index number of retail prices, on the base 1926-1930=1000, was 1096 for May, an increase of 1·1 per cent for the month. Increases were recorded in food, clothing and miscellaneous commodities.

Newfoundland

COST-OF-LIVING.—The index number of the Department of Health and Welfare, on the base October 1, 1938=100, was 143·7 at August 1, an increase of 1·9 per cent for the month, due chiefly to higher food prices; there was a slight increase in the fuel and light group also.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 98·7 for July, an increase of 0·1 per cent for the month. In each of the ten groups, the change recorded was less than one per cent.

COST-OF-LIVING.—The Bureau of Labour Statistics index number, on the base 1935-1939=100, was 116·9 at July 15, an increase of 0·4 per cent for the month. Increases of about one per cent were recorded in the food and in the fuel, electricity and ice groups, while there was a slight decline in rent.

The index number of the National Industrial Conference Board, on the base 1923=100, was 97·5 for July, an increase of 0·2 per cent for the month which was entirely due to an advance of 0·8 per cent in food prices.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment at the beginning of August showed a further expansion according to statements tabulated by the Dominion Bureau of Statistics from 13,130 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. They employed 1,780,559 workers; this was an increase of 21,362 persons, or 1·2 per cent, over their staff at July 1. Based on the 1926 average as 100, the index at the first of August was 177·8, as compared with 175·7 in the preceding month, and 160·6 at August 1, 1941. The latest figure is the maximum in the record.

The experience of the years since 1920 indicates that employment usually, though not invariably, gains at midsummer, there being, on the average, a slight rise in the index; the expansion at the beginning of August of the present year was substantially larger than the average gain from July to August in the period, 1921-1941. Accordingly, the seasonally-adjusted index also advanced, standing at 173·0, compared with 172·4 at July 1, 1942.

Heightened activity was recorded at the beginning of August in manufacturing (notably in iron and steel products), and in many of the non-manufacturing industries; the exceptions were mining, logging and trade. The declines in the two groups last-named were seasonal in character.

The salaries and wages disbursed at August 1 by the co-operating employers showed an increase of 1·5 per cent, accompanying that of 1·2 per cent in the number of employees. The latest reported weekly payroll aggregated $50,892,574, a gain of $770,364 over the amounts distributed by the same employers at the beginning of July. The per capita average earnings at August 1 were $28.58, and at July 1, $28.49[1]. The August 1, 1941, average had been $25.69.

If the statistics for the finance industries are included in the general totals, the survey shows that the 1,843,766 persons in recorded employment at August 1 then received the sum of $52,810,259 for services rendered in the last week in July. This was a per capita average of $28.64. At July 1, the establishments co-operating in the nine leading industrial groups,—manufacturing, logging, mining, communications, transportation, construction, services, trade and finance—reported an aggregate payroll of $52,024,883[1], paid to 1,822,386 men and women. Their average earnings were $28.55[1].

A comparison of the course of employment and payrolls in the last twelve months shows that the increase of 10·7 per cent in the number of persons recorded as at work in the eight leading industries has been accompanied by that of 23·2 per cent in their weekly payrolls; in the nine main industrial divisions, including finance, the gain in employment has amounted to 10·5 per cent, and in payrolls, to 22·7 per cent in the year.

Unemployment in Trade Unions.—At the beginning of September, 1942, the percentage of unemployment among trade union members stood at 0·9 in contrast with percentages of 1·8 in August and 2·4 at the beginning of September, 1941. The percentage for September was based on returns compiled from 2,243 local labour organizations with a combined membership of 375,907 persons.

Report of Employment and Selective Service Offices.—Reports received from the Employment and Selective Service Offices during August, 1942, showed a decline when compared with the preceding month, but a gain over the corresponding period a year ago, this computation being based on the average number of placements recorded daily. Construction, services and manufacturing were mainly responsible for the loss under the first comparison, being partly offset by a gain in

[1]Revised.

agriculture. The improvement over August, 1941, was due mainly to an increase in manufacturing, although placements were also higher in trade and construction. These gains were partly offset by declines in services, agriculture and logging. Vacancies for August, 1942, numbered 83,027; applications, 94,018 and placements in regular and casual employment, 50,360.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon average prices during the period 1935 to 1939 as 100 was 117·4 at the beginning of September as compared with 117·7 at the beginning of August; 117·9 for July; 114·7 for September, 1941; 106·4 for September, 1940; and 100·8 for August, 1939. The decline during the month was due mainly to lower prices for potatoes, beef, lamb and onions, which more than offset increases in the prices of eggs, butter, and oranges. All other groups

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† Week ended October 1, 1942.

(1) Base, 1926=100. (2) Base, 1935-1939=100. (3) Figures are for the end of the preceding month.

(6) Adjusted, where necessary for seasonal variation. (8) Notes in the hands of the public.

(9) Figures for four weeks ended September 26, 1942, and corresponding previous periods

(10) MacLean's Building Review.

were unchanged. The increase in the index since August, 1939, down to September, 1942, was 17·4 per cent as compared with an increase of 34·3 per cent for the comparable period during the last war, July, 1914 to August, 1917. Since the introduction of price control last October the index, after adjustment to the base August, 1939, has advanced from 114·6 to 116·5 or 1·9 points. The increase for the corresponding period during the last war was 19·2 points, after the index was similarly adjusted to the base July, 1914.

In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 96·0 for September as compared with 95·6 for August; 93·2 for September, 1941; 83·1 for September, 1940; and 72·3 for August, 1939. The increase between August, 1939, and September, 1942, was 32·8 per cent and between July, 1914, and August, 1917, was 85·9 per cent.

Business Statistics.—The table on page 1112 gives the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business which reflects activity in the production and distribution of goods was little changed for August from the level of the previous month. Lower volume was indicated for mineral production, construction, and the output of electric power as well as in the distribution of goods, but these declines were offset by the substantial advance in manufacturing production chiefly in tobacco, textiles and iron and steel. The index for August, 1942, was somewhat lower than one year earlier, declines being recorded for mineral production, manufacturing, and construction as well as in the distribution of goods. The output of electric power was materially higher in the same comparison.

A high level of productive operations was indicated by the index of employment which was 10·7 per cent higher in August than one year ago and 51 per cent higher than in August, 1939, the last pre-war month.

Cumulative totals for the first eight months of 1942 as compared with the similar period of 1941 show the production of coal to be 11·7 per cent greater, cheese production 30 per cent greater, the number of cigarettes released 14·8 per cent, steel ingot production 25·1 per cent, electric power production 14·4 per cent greater and retail sales 13·4 per cent greater. Grain marketings declined 40·7 per cent in the same comparison, building permits 34·7 per cent, receipts of gold at the mint 8·2 per cent, and flour production 7·2 per cent. The value of construction contracts awarded declined from 283 millions of dollars for the first eight months of 1941 to 199 millions for the similar period in 1942.

Strikes and Lockouts.—The number of strikes and lockouts recorded for September, 1942, was 43, invloving 13,316 workers and causing time loss of 37,838 man working days, as compared with 59 disputes for August, affecting 21,795 workers, with a time loss of 53,535 man working days. The number of strikes, the number of workers involved and the time loss were all substantially lower. Most of the strikes were terminated within a short time but several disputes involved a considerable number of workers and caused a large percentage of the time loss. These were: tobacco factory workers in Montreal, P.Q., saw and planing mill workers at Rimouski and Priceville, P.Q., salmon fishermen at Fraser River, B.C., paper mill workers at Beauharnois, P.Q., and freight handlers at Halifax, N.S., and Saint John, N.B. During September, 1941, there were 29 strikes, involving 10,773 workers with a time loss of 82,463 days.

Of the 43 disputes during September of this year 42 were terminated during the month. Five resulted in favour of the workers, fifteen in favour of the employer, three were compromise settlements, four were partially successful and fifteen were indefinite in result. One dispute involving 45 workers was unterminated at the end of the month.

Prime Minister describes some of post-war goals

In an address delivered in Toronto at the Convention of the American Federation of Labor, the Prime Minister of Canada, Rt. Hon. W. L. Mackenzie King made a statement of some of Canada's post-war goals in regard to employment and social security.

Dealing with the question of employment the Prime Minister spoke as follows:

"It is one of the most bitter ironies of our time that full employment has been achieved only as a result of war. Men everywhere are asking the question: Why, if there is no lack of work in wartime, is work not to be had at a time when men, instead of devoting themselves to the work of destruction, might enjoy the fruits of their labour?

"I believe the war is teaching us that the obstacles to full employment were not real obstacles; that a partnership of management, of workers and of the community can make useful work available, in time of peace no less than in time of war, for all who need or want to work."

In regard to social security the Prime Minister said:

"The era of freedom will be achieved only as social security and human welfare become the main concern of men and nations. . . .

"It is necessary that social security and human welfare should be expressed in definite terms. It is, however, not my purpose to attempt to give a blue-print of the new order. Of the kind of objectives I have in mind, I would merely mention the following as a national minimum: Useful employment for all who are willing to work; standards of nutrition and housing, adequate to ensure the health of the whole population; social insurance against privations resulting from unemployment, accident, the death of the breadwinner, ill health and old age.

"In war, the preservation of the existence of the community is placed before the interests of individuals or groups. Here, too, is a lesson for meeting the problems of peace.

"By placing the interests of the community before the interests of individuals or groups; by social control in which government, labour and management all share, human well-being can be vastly increased."

Prime Minister on relationship between warrior and worker

During the course of his convention address the Prime Minister paid tribute on behalf of the armed forces to the workers as follows:—

"In speaking of the significance of labour in the war, you who represent so vast a number of the workers of this continent would, I know, be the first to protest were I to fail to pay to your comrades in the fighting forces their due and fitting tribute. Whatever burdens and hardships may fall to your lot, or to mine, we all know that nothing can compare with the readiness to sacrifice life itself which the soldiers, sailors, airmen and merchant seamen accept as the condition of their service.

"But the man in the fighting forces—the vast majority drawn from the ranks of workers—would wish me to pay every possible tribute to the men and women, without whose daily toil, their own services would be of no avail. They, above all others, are looking to-day to the men and women on the farms and in the fisheries who keep them fed; to the men in forest and mine whose daily toil is the foundation of industry; to the men and women in factory and workshop who fashion their weapons and make their munitions; to the men and women in transport and in all the services of supply of a modern nation at war. In a word, the toil and skill and devotion of a vast industrial army are essential to keep the troops in the field, the ships on the sea, and the planes in the air, on all the fronts of a world-encircling struggle. Side by side with our fighters, it is to the workers that we must look if the enemy is to be destroyed and if freedom is to prevail.

"The key to victory is a partnership unbroken and unbreakable of the warrior and the worker. The warrior cannot fight without weapons, munitions, supplies and food produced by the worker. The worker of to-day cannot escape a return to serfdom save by the might of the armed forces. The freedom of the world depends upon the combined efforts of the fighting brotherhood of warriors and the producing brotherhood of workers."

(The complete address of the Prime Minister at the American Federation of Labor Convention from which the above extracts have been taken has been reprinted by the Wartime Information Board and is being issued as a supplement to the current number of the LABOUR GAZETTE.)

Conversion of civilian industry to full war production

An example of the conversion of less essential civilian industry to full-time war production is found in the action taken by four prominent firms engaged in the furniture manufacturing industry to train their workers for the construction of aeroplane components. The furniture companies will thus be able to accept sub-contracts from the aeroplane industry.

In making this announcement, the Minister of Labour, Hon. Humphrey Mitchell, stated that this change-over was being effected under the auspices of the Dominion-Provincial War Emergency Training Program with the full co-operation of the plants concerned.

This development stems from the undertaking of a Government contract by a plant of Massey-Harris Company Limited, near Toronto. This plant undertook to sub-let a large part of the contract but the problem was to obtain the necessary skilled labour in the woodworking trades.

Sensing the urgency of the situation, the Ontario division of the War Training Branch of the Dominion Department of Labour, under direction of R. F. Thompson, Dominion Supervisor of Training, made an arrangement with four furniture companies which employed skilled woodworkers—Kroehler Manufacturing Company, Imperial Rattan Company, Andrew Malcolm Company, and Knechtels Limited. These four companies each sent a number of key-workers to be trained in the Massey-Harris plant in a plan school conducted by the Company in co-operation with War Emergency Training.

These key-workers were paid their regular wage scales by their own firms during the course, the companies being reimbursed to

the extent of the subsistence allowances provided by the program. Instructors were provided by the Massey-Harris firm.

At the conclusion of the course the men were returned to their respective companies, each of which opened their own plant school with these key-men acting as instructors. In this manner the four furniture companies took over the re-training of their own employees and thereby increased Canada's productive capacity in a vital sphere of war production.

Commenting on the splendid co-operation of all parties involved in this arrangement, the Minister of Labour stated that he hoped that the lead thus given by these five companies would be quickly followed by other firms in thus helping to solve the man-power by converting skilled workers from less essential work into urgent war production.

Decisions of National War Labour Board

Of the 339 cases in which Findings and Directions have been delivered by the National War Labour Board to September 30, 1942, 183 had to do with wage increases, 38 with cost-of-living bonuses, and 118 were miscellaneous. Of the wage cases 169 were granted in full or in part and 14 were refused. Of the cost-of-living bonus cases 37 were granted and 1 was refused. Of the miscellaneous cases, 104 were granted and 14 were refused.

Part-time training of Canadian workers for war industries

The part-time training of workers in low priority occupations for fitness in war industry is now being planned under the direction of the Training Branch of the Dominion Department of Labour, it was announced recently by the Minister of Labour, Hon. Humphrey Mitchell.

The plan, which will go into effect shortly, provides for part-time training in evening classes. A great part of this training will be in bench fitting, general machine shop practice, and machine-tool operation. Those taking the part-time classes will be trained on condition that when competent they will accept employment in a war industry as the need for their absorption into such war plants is indicated through National Selective Service.

Government policy in regard to statutory holidays

In the interests of the war effort and to promote uniformity among employers and employees in the observance of statutory holidays throughout the Dominion, the Government has found it expedient to declare its policy in the matter according to a statement issued recently by the Hon. Humphrey Mitchell, Minister of Labour.

The Government's policy in regard to statutory holidays is contained in an Order-in-Council (P.C. 8682) designed "to remove the present uncertainty as to whether employees generally should or should not be required to work on each such holiday."

Apart from Sundays or such weekly days of rest provided in lieu thereof, the Order-in-Council sets forth the following statutory holidays: New Year's Day, Good Friday, the first Monday in July, Labour Day, Thanksgiving Day, Christmas Day.

The Order declares that these statutory holidays only should be observed by employers and employees for the duration of the war. It also provides that "reasonable opportunity should continue to be allowed to employees for the performance of their religious duties."

It is also declared that any collective labour agreement which is inconsistent with the provisions of the Order "should be suspended for the duration of the present war by mutual consent of the parties thereto but, pending such suspension, shall remain in force and continue to be observed," the Order states.

While the provisions of the Order-in-Council concerning statutory holidays in private employment are a declaration of the Government's policy, the holidays recommended for business and industry are made mandatory for the Civil Service. The Order states that the same six days shall be the statutory holidays to be observed by members of the Civil Service of Canada as defined by P.C. 6702 (Civil Service Cost-of-Living Bonus Order) and the same recommendation regarding time off for the performance of religious duties is provided as applying to civil servants.

The Order also suspends for the duration of the war the provisions of the Dominion Day Act and declares that throughout Canada the first Monday in July will be a legal holiday and will be kept and observed as such under the name of Dominion Day for the period of the war.

Industrial Disputes Investigation Act

Seven applications for the establishment of Boards of Conciliation and Investigation were received during the month of September. Five boards were established and the constitution of a board established in August was completed. One board submitted its report. Two applications, which did not meet the requirements of the statute, were rejected. Ten disputes were referred to Industrial Disputes Inquiry Commissioners for investigation and one commission was appointed in pursuance of the provisions of Section 65 of the Industrial Disputes Investigation Act. Thirteen reports were received

from Industrial Disputes Inquiry Commissioners. Seven disputes were recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 1121.

"Suggestion Systems" in Canada

Reference was made in the September issue of the Labour Gazette (page 1039) to an article on Employees' Suggestion Systems in the United States. Various types of suggestion systems are already in effect in a number of Canadian plants.

An illustrated article on the operation of the suggestion plan in Canada is to be found in the September issue of *Manufacturing and Industrial Engineering,* 73 Richmond St. W., Toronto. This article mentions the results achieved under the plan in several Canadian industries. It describes in detail methods by which a suggestion plan may be undertaken and successfully carried through. "Suggestion plan systems," it declares, "should be launched under the direction of the Labour-Management Committee when such a committee exists. This assures the employee of fair treatment and helps to promote harmonious labour-management relations. The first job is to impress the employees with the fact that management is sincere."

Various formulas have been utilized in Canadian plants for determining the amount of awards to employees, based on the value to the company of suggestions. While the National War Labour Board has not issued a general directive in regard to Employees' Suggestion Systems, it has indicated its position to firms which have asked if the subject came within the jurisdiction of the Board.

The Executive Committee of the National Board has stated that small awards to employees who may advance worthwhile ideas would not appear to contravene the Wartime Wages Control policy; but it expressed the opinion that there should be a maximum as well as a minimum amount stated in any such scheme, for the reason that if a precedent were established some employers might make such a scheme the indirect means of increasing wages.

Meeting of Permanent Commission of Quebec Superior Labour Council

The Permanent Commission of the Quebec Superior Council of Labour held its first meeting October 15 and will meet the third Thursday of each month thereafter. The Commission serves as a liaison between the Council and the Minister of Labour and prepares the work of the Council.

The Superior Council of Labour was provided for by a 1940 statute (Labour Gazette, August, 1940, p. 810). Its 24 members representing labour, management and persons conversant with social and economic problems were appointed last December. Six non-voting associate members representing the Department of Labour and the Department of Municipal Affairs, Trade and Commerce were also appointed. The function of the Council is to study questions relating to labour and social security.

The Permanent Commission of the Council is also tripartite body consisting of six members and a number of substitutes. Representing labour on it are Alfred Charpentier, Confederation of Catholic Workers of Canada and Joseph Matte, Quebec and Levis Federated Trades and Labour Council; representing management are Blair Gordon, Canadian Manufacturers' Association, J. R. Latter, Canadian Pulp and Paper Association and Emile Arbour, Montreal Master Printers' Association; and representing the economic and sociological group are Anatole Désy, University of Montreal, Rev. G. H. Levesque, Director, Laval University School of Social Sciences, and Léonce Girard, Montreal District Industrial Joint Committees. Mr. Désy is President. In addition the Commission has two non-voting associate members representing the Minister of Labour and the Minister of Municipal Affairs, Trade and Commerce who appointed their respective deputy ministers, Gérard Tremblay and Louis Coderre.

Women admitted to Amalgamated Engineering Union in Britain

By a majority vote the Amalgamated Engineering Union in Britain has decided to accept women members. During the war the Union has become increasingly concerned with the problems of women workers now extensively employed in the engineering industry. In May, 1940 the Union signed an agreement with the Engineering and Allied Employers' National Federation relaxing existing customs to permit the employment of women in jobs formerly reserved for men and approving a wage schedule under which women workers after a 32-week probationary period receive the basic rate and national bonus appropriate to the men they replace if they are able to carry out the men's work without additional assistance or supervision. A similar agreement was signed with the Ministry of Supply covering women employed in British Ordnance Factories (Labour Gazette, March, 1942, p. 259).

The recent conference of the National Committee of the Union in June discussed such problems of women workers as nursery

facilities, shopping time and the application of the principle of equal pay for equal work. It also urged members to give maximum assistance in training women both at the trade and in trade unionism (Labour Gazette, July, 1942, p. 760).

Shorter hours in British ordnance factories

Following the recent report of the Select Committee on National Expenditure which criticized the long hours being worked in many Royal Ordnance Factories in Britain, hours have now been reduced to 60 a week for men and 55 for women in all but three or four of the 42 Royal Ordnance Factories. These factories employ 300,000 persons, 60 per cent of whom are women.

As a result of the reduction in hours output does not appear to have suffered except from wholly automatic machines. Piece-workers' wages are not appreciably lowered because absenteeism due to excessive hours has been reduced. Time-workers, however, have suffered a decline in earnings due to reduction of hours worked at overtime rates. Negotiations to improve their position are now taking place.

University classes for American trade unionists

A scheme to provide a nine-months' university course for trade union representatives has been worked out by Harvard University and a group of trade unions. The plan will enable selected union members with the aid of fellowships to attend classes under the auspices of the Harvard Business School, the School of Public Administration, and the Department of Economics. Union representatives took part in planning the course but it was recognized that some experimenting would be necessary to determine the most useful subjects and teaching methods. An advisory committee of national union representatives will collaborate with University officials in directing the course.

Three principal courses of study are planned. One course, called "Economic Analysis," entails an appraisal of the economic condition of business enterprises and of industries. The students will attack this subject by making their own analyses of specific corporations or industries. They will use material which has been gathered by unions for wage negotiations or arbitrations and by preparing answers to material which employers have submitted in negotiations.

A second course will deal with "Trade Union Problems and Policies." In this course the students will analyse actual problems which have confronted the national officers of different unions. Their analyses will be written up as "cases," and each member of the class will work out his own solution just as if he were assigned to handle the problem as a representative of the national union.

A third course will be called "Human Problems of Administration." It will involve a study of group psychology and problems which arise in handling groups of men. A critical examination will be made of job evaluation plans and the principles of time study and rate setting.

The participating unions, which include organizations of railway clerks, hatters, electricians and ladies' garment workers, have selected fifteen students to take the course this year. The students are not required to have any particular educational standing but are selected on the basis of their general intelligence, capacity for leadership and devotion to the labour movement. Nearly all of those chosen have served as shop committee men, local union officers or national representatives. The union pays their expenses and half the cost of their tuition. The other half is paid from a fund raised by friends of the University.

Protection of children in wartime in U.S.A.

The Commission on Children in Wartime appointed by the Children's Bureau of the United States Department of Labour, has drawn up, in consultation with the Office of Civilian Defence and the Office of Defence Health and Welfare Services, a program to guide committees of State and local defence councils concerned with the welfare of children. The program is based on the Children's Charter in Wartime which was adopted March 18, 1942, by the Commission, and which calls on citizens to safeguard children from danger, distress and exploitation arising out of war conditions.

In regard to the employment of children the program stipulates that the health and educational opportunity of employed youth must be safeguarded and lays down the following principles summarized by the chief of the Children's Bureau:

> No child under 14 years of age a part of the hired labour force; none under 16 employed in manufacturing and mining occupations; none between 14 and 16 employed in other occupations that involve release from school or readjustment of school programs unless it has been determined that labour shortages cannot be met otherwise, and guidance of youth 16 to 18 years of age whose work is essential to the war effort into occupations suited to their age and capacity in which they can make the greatest contribution with the least hazard to their health and safety.

The program calls for the provision of medical, dental and mental-health services for

children and mothers, particularly for those with fathers and husbands in the armed forces, and for those soon to enter war industry or the services. By means of nutrition education, school lunches and low-cost milk, children may receive adequate nourishment despite a rising cost of living and rationing of food supplies.

The importance of maintaining normal family and community life for children to reduce the effects of wartime strain and insecurity is stressed. Child welfare and other social service agencies must conserve home life for children and protect them from neglect and juvenile delinquency arising from unsettled conditions. Children separated from their families by wartime dislocation must be adequately cared for, and day-care provided for the children of mothers whose employment is essential to the war program. Public assistance measures must be developed to meet home problems arising from increased cost of living, migration and separation of families. Appropriate care for unmarried mothers and their children must also be provided.

There must be full school attendance, school opportunity and recreational opportunity for every child, and steps must be taken to overcome or compensate for shortages of schools and teachers. School programs must be adjusted, where necessary, to conform with recommended child employment policies.

Children in danger zones must be protected from enemy attack, cared for after attacks, and preparations made for their evacuation and reception elsewhere if necessary.

United States ruling on premium pay for holidays

By an Executive Order issued September 9, President Roosevelt ruled out for the duration premium pay for work on Saturdays, Sundays and all but six holidays. The Order applies to all employers engaged directly or indirectly in war production, many of whom had been paying double time on such days.

The Order is designed to secure greater production by checking absenteeism which occurred on days when no premium was paid, and to ensure observance of the principle of one day's rest in seven recently advocated by a Committee representing eight agencies of the Federal Government. (LABOUR GAZETTE, August, 1942, p. 881). The Order declares that "the continuous operation of plants and machines in prosecuting the war does not require that employees should work seven consecutive days." In cases of emergency a seventh day may be necessary but double time must be paid for work on it.

The Order designates six holidays to be observed by war industry: New Year's Day, Fourth of July, Labour Day, Thanksgiving, Christmas and either Memorial Day or any other holiday of greater local importance. Work performed on these days must be paid at time and one-half but premium pay for work on any other holiday is forbidden.

The Order permits payment of not more than time and one-half where any employment contract or any law such as the Fair Labor Standards Act, the Public Contracts Act, or the Federal Eight-Hour Day Law requires overtime payment for work in excess of eight hours a day or 40 a week, or for work performed on the sixth day of any regularly scheduled work-week.

All Federal departments and agencies are required to draft future contracts in accordance with this Order and to revise existing contracts to bring them into conformity with the Order. The Order does not affect the conditions of employment of Government employees.

Questions of interpretation are to be referred to the Secretary of Labor who has recently issued a statement clarifying a number of points in the Order. Holidays and days when the employee reports for work and is sent home are to be counted as days worked in computing the sixth and seventh days of work, and the highest rate must be paid when more than one premium rate is applicable to any particular work. It also defines more precisely the classes of workers to which the Order applies.

Equal pay to women in the United States

A recent decision of the American War Labor Board establishes the Board's policy in regard to the question of whether women industrial workers should receive as much pay as men for the same kind of work. The Board declared its opinion that women who "in comparable jobs produce work of the same quantity and quality as that performed by men" should receive the same wages.

This statement of policy arose out of a decision by the War Labor Board ordering the Brown & Sharpe Manufacturing Company of Providence to introduce the principle of equal pay for equal work for their 7,600 workers. The Company had offered to reduce the differential between the wages for men and for women to a maximum of 20 per cent.

The Board's statement read in part as follows:

"The idea of 80 per cent efficiency of women has evolved from a biological phenomenon which applies only to a period of time and not to relative efficiency and competence at other times. There is no proof, scientific or otherwise, that women are 20 per cent less capable than men all the time."

The Board made allowances, however, for certain instances where women cannot perform the heavy labour performed by men, and special arrangements, involving extra cost, must be made to adapt an operation for women workers. It was noted that the principle of equal pay for equal work was not a formula which could simply be ordered into effect, but would have to be worked out in individual situations "by parties who co-operate in good faith to secure the desired objectives."

A recent memorandum of Canada's National War Labour Board in effect recognized the practical application of the principle of equal pay for equal work. (Labour Gazette, September, 1942, page 996.)

Mobilization of women workers for U.S. war industry

A Women's Policy Committee to assist the U.S. War Man-Power Commission in mobilizing women workers for war industry has been set up. The Committee will study and advise on matters connected with the recruitment and training of women workers. It will also co-operate with the Management-Labour Policy Committee which advises the Commission on general questions of man-power policy.

The Committee includes a member of the Amalgamated Clothing Workers of America, the International Ladies Garment Workers Union, the National League of Women Voters and the American Legion Auxiliary, and several women prominent in administrative or educational work.

Paul V. McNutt, chairman of the Man-power Commission, in announcing the formation of the new Committee declared that by December, 1943, women will represent at least 30 per cent of the labour force employed in war production. By that date 18 million women will be gainfully occupied in the United States, six million in war industry. "This means that one out of every six women over 18 years of age that are not now in the labour force will be needed, and one out of every four housewives—perhaps one out of every three—between the ages of 18 and 44 will be employed."

I.L.O. study on food consumption

The International Labour Office has recently issued a report entitled "Food Consumption and Dietary Surveys in the Americas." This study, which was presented to the Eleventh Pan-American Sanitary Conference held in Rio de Janeiro in September of this year, contains in convenient form material which has already been published by the I.L.O. It is divided into two chapters. The first describes "in broad outlines, so far as evidence permits, food expenditure and consumption habits and nutrition in wage-earners' families . . . ." The analysis is based on official and other authoritative publications, the source for Canada being the Dominion Bureau of Statistics study on "Family Income and Expenditures in Canada, 1937-1938." Chapter II is designed to serve as an introduction to the principal problems and methods in food consumption surveys. It discusses types of surveys, problems of planning and methods of procedure, items to be collected in regard to food, and principles according to which the material collected can be analysed and appraised.

Canada Year Book, 1942 Edition, now available

Publication of the 1942 edition of the Canada Year Book has just been announced by the Dominion Bureau of Statistics, Department of Trade and Commerce, under the authorization of the Hon. James A. MacKinnon, Minister of Trade and Commerce.

The Canada Year Book is the official statistical annual of the country and contains a thoroughly up-to-date account of the natural resources of the Dominion and their development, the history of the country, its institutions, its demography, the different branches of production, trade, transportation, finance, education, etc.—in brief, a comprehensive study within the limits of a single volume of the social and economic condition of the Dominion. This new edition has been thoroughly revised throughout, and includes in all its chapters the latest information available up to the date of going to press.

The 1942 Canada Year Book extends to over 1,000 pages, dealing with all phases of the national life and more especially with those susceptible of statistical measurement. A statistical summary of the progress of Canada is included in the introductory matter. This gives a picture in figures of the remarkable progress that the country has made since the first census of the Dominion was taken in 1871.

The special articles that are shown in this edition of the Year Book have been selected to illustrate the effects of the War on the Canadian economy and to show such changes and developments as have taken place to date. There are such special articles dealing with manufactures, external trade, prices, agriculture, forestry, mines and minerals, power, transportation and immigration. The important chapters on labour, public finance, currency and banking, and internal trade

have also been directly related to the war effort and the special war chronology begun in the 1940 Year Book is brought up to date. Other important features that do not relate specifically to the war are also included.

Persons requiring the Year Book may obtain it from the King's Printer, Ottawa, as long as the supply lasts, at the price of $1.50 per copy; this covers merely the cost of paper, printing and binding. By a special concession, a limited number of paper-bound copies have been set aside for ministers of religion, bona fide students and school teachers, who may obtain such copies at the nominal price of 50 cents each, but application for these special copies should be directed to the Dominion Statistician, Dominion Bureau of Statistics, Ottawa.

Bulletin on trade union agreements in Canada

"Trade Union Agreements in Canadian Industry" is the title of a 177-page bulletin just issued by the Industrial Relations Section of the School of Commerce and Administration, Queen's University.

The bulletin opens with two chapters entitled "Why Trade Union Agreements are Important" and "What Trade Union Agreements Are." It then proceeds to deal specifically with agreements in Canada. The authors have taken a cross-section of 150 collective agreements, secured from a wide variety of industries, unions, and geographical areas. These are analyzed as they applied on November 1, 1941. Separate chapters deal with agreements in the various types of industry.

The types of provisions contained in Canadian industrial agreements are classified and summarized. The bulletin contains fourteen tables which serve to illustrate the findings in the text.

Comparisons are made between the situation in Canada and the collective bargaining structures of Great Britain and the United States. "The main difference in the collective bargaining structure of Great Britain and Canada" the bulletin states, "does not lie in the content of the collective agreements. It lies rather in the extent to which collective bargaining is recognized as the normal method of regulating industrial relations in an industrial economy, in the wider scope of the agreements, which are generally on a national or regional scale and therefore able to act as a force towards wage and hour uniformity and stability, and in the longer experience of collective bargaining during which administrative machinery has been built up . . . .

"In general, Canadian agreements seem to bear a closer resemblance to those in the United States than to those in Great Britain in their content, form and wording."

Factory lighting in Ontario

In the August issue of the LABOUR GAZETTE in an article on Factory Welfare Regulations in Great Britain and Canada, it was stated (p. 931) incorrectly that except in Quebec "the problem of adequate lighting in factories has not been dealt with by any of the Canadian provinces." The Ontario Factory, Shop and Office Building Act requires every factory, shop, bakeshop, restaurant, office and office building, including all passages and sanitary conveniences in connection with such workplaces to be properly lighted.

I.L.O. Issues Year Book of Labour Statistics for 1941

The International Labour Office, Montreal, has recently issued its *Year Book of Labour Statistics 1941,* which contains a summary of the principal labour statistics in some sixty countries in all parts of the world.

The plan of the present edition is similar to that of the preceding editions, but several important improvements have been introduced. The *Year Book* appears in trilingual form for the first time, Spanish having been added to French and English. The statistics for Latin American countries have been considerably expanded. The tables have been rearranged in order to group the countries by continents, so as to make more evident the characteristics which are common to countries in the same grand divisions of the world. In addition, two new tables have been added, one on the percentages of population gainfully occupied in different age groups and the other on indices of international comparisons of the cost of food.

All the figures in the *Year Book* have been taken, with a few exceptions, from official publications or have been communicated to the Office by governments. And in the majority of cases, the tables were submitted before publication to the statistical services of the different countries.

All the tables have been brought up to date so far as possible. In the present circumstances, however, it has not been possible to carry out this task as completely as formerly, in particular for belligerent or occupied countries where many statistical series are no longer published.

In compiling and presenting this mass of material, the Office has tried to bring out as clearly as possible the nature and significance of the figures available in different countries. Wherever possible the scope and kind of the statistics are indicated, and the introductory note to each section describes the features of each type of statistics and the reservations they call for.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

IN the month of September seven applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour, as follows:—

1. From employees of the London Concrete Machinery Company, Limited, London, Ont., members of Local 2470, United Steelworkers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect approximately 60 employees directly and 75 indirectly. The application also alleged that two employees of the company had been unjustly dismissed on account of their union membership and activity. On September 19 His Honour Judge I. M. Macdonell, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. Pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, the Commissioner also was authorized to investigate the alleged unjust dismissal of the two aforementioned employees.

2. From employees of Peacock Brothers, Limited, Ville La Salle, P.Q., members of Lodge 631, International Association of Machinists. The dispute, which arose out of a request for union recognition and a collective agreement providing for increased rates of pay, was said to affect approximately 300 employees directly. On September 11, Mr. Bernard Rose, K.C., Montreal, was authorized as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

3. From employees of William Kennedy and Sons, Owen Sound, Ont., members of Local 2469, United Steelworkers of America. The dispute, which arose out of a request for union recognition and a collective agreement providing for wage adjustments and the reclassification of various semi-skilled occupations, was said to affect approximately 500 employees directly. On September 21, Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

4. From employees of the Ontario Steel Products Company, Limited, Chatham, Ont., members of Local 127, United Automobile Workers of America. The dispute, which arose out of a request for union recognition and a collective agreement providing for increased rates of pay, was said to affect approximately 250 employees directly. On September 25, Mr. J. S. McCullagh, Industrial Relations Officer of the Dominion Department of Labour, Ottawa, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

5. From outside civic employees of the City Works Department of the Corporation of the City of London, Ont., members of London Civic Employees' Federal Union 107, Trades and Labour Congress of Canada. The dispute, which arose out of a request for an increase in cost-of-living bonuses, was said to affect 170 employees directly and 15 indirectly. The application did not meet the requirements of the Industrial Disputes Investigation Act, inasmuch as the municipal services performed by the employees concerned do not fall within the scope of the statute, and the interested parties were advised that a Board of Conciliation and Investigation would not be established to deal with the dispute.

6. From employees of the Ontario-Minnesota Pulp and Paper Company, Limited, Fort Frances, Ont., members of Local 92, International Brotherhood of Pulp, Sulphite and Paper Mill Workers, Local 306, International Brotherhood of Paper Makers, Lodge 760, International Association of Machinists, Local 731, International Brotherhood of Electrical Workers, and Local 146, International Brotherhood of Firemen and Oilers. The dispute, which arose out of a request for an extension of the existing provisions for vacations with pay, was said to affect 503 employees directly.

7. From employees of Robin Hood Flour Mills, Limited, Moose Jaw, Sask., members of Local 201, United Packinghouse Workers of America. The dispute, which arose out of a request for union recognition and a collective agreement, was said to affect 137 employees directly.

Boards Established

On September 2 a Board of Conciliation and Investigation was established to deal with a dispute between the Canadian Marconi Company, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's Marconi Union. During the month of August, Mr. Bernard Rose, K.C., Montreal, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (Labour Gazette, September, 1942, page 1003). The Commissioner's report, received on September 1, indicated that he had been unable to effect a mutually satisfactory settle-

ment of the dispute and recommended the establishment of a board. The personnel of the board is as follows: Dr. Gaspord Fauteux, M.P., Montreal, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Drummond Wren, Toronto, appointed on the nomination of the employees; and Senator Elie Beauregard, K.C., also of Montreal, appointed on the nomination of the employer.

On September 2 a Board of Conciliation and Investigation was established to deal with a dispute between the Taylor Electric Manufacturing Company, Limited, London, Ont., and its employees, members of Local 517, United Electrical, Radio and Machine Workers of America. During the month of August Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, had been appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute (Labour Gazette, September, 1942, page 1003). The Commissioner's report, received on September 1, indicated that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a board. Pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, the Commissioner also had been authorized to investigate the dismissal of the president of the local union from the service of the employing company, allegedly on account of his union membership and activity. The investigation revealed the allegation to be well-founded and the Commissioner recommended that the employee in question be reinstated at the same rate of pay, the reinstatement to be effective as of the date of his discharge; subsequently an order to this effect was issued by the Minister of Labour. The personnel of the Board of Conciliation and Investigation is as follows: His Honour Judge I. M. Macdonell, Toronto, chairman, appointed on the joint recommendation of the other two members; Professor Christian Sivertz, University of Western Ontario, London, appointed on the nomination of the employees; and Mr. J. A. E. Braden, K.C., also of London, appointed on the nomination of the employer.

On September 18, a Board of Conciliation and Investigation was established to deal with a dispute between the Canada Paper Company, Windsor Mills, P.Q., and its employees, members of the National Catholic Union of Canada Paper Company Employees (Labour Gazette, September, 1942, pages 1003-1004). On September 1, Mr. Bernard Rose, K.C., of Montreal, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute. The Commissioner's report, received on September 18, indicated that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a board. Messrs. Gerard Picard, Quebec, and J. E. Crankshaw, K.C., Montreal, were appointed members of the board on the nomination of the employees and employer, respectively, and at the end of the month were conferring with a view to submitting a joint recommendation of a person to be appointed third member and chairman of the board.

On September 18 a Board of Conciliation and Investigation was established to deal with a dispute between the Dominion Engineering Works, Limited, Longueuil, P.Q., and its employees, members of the Metal Trades Council of Montreal and vicinity. During the month of August Mr. Bernard Rose, K.C., Montreal, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute (Labour Gazette, September, 1942, page 1004). The Commissioner's report, received on September 17, indicated that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a board. Messrs. James Somerville and W. C. Nicholson, K.C., both of Montreal, were appointed members of the board on the nomination of the employees and employer, respectively, and at the end of the month were conferring with a view to submitting a joint recommendation of a person to be appointed third member and chairman of the board.

On September 22 a Board of Conciliation and Investigation was established to deal with a dispute between the Allison Logging Company, Limited, the Kelley Logging Company, Limited, J. R. Morgan, Limited, and Pacific Mills, Limited, Queen Charlotte Islands, B.C., and their respective employees, members of Local 1-71, International Woodworkers of America (Labour Gazette, July, 1942, page 761). Following the receipt of the employees' application for the establishment of a board, officials of the Dominion Department of Labour had endeavoured to effect a mutually satisfactory settlement of the dispute, but to no avail. Messrs. A. J. Turner, M.L.A., and R. H. Tupper, both of Vancouver, were appointed members of the board and at the end of the month, were conferring with a view to submitting a joint recommendation of a person to be appointed third member and chairman of the board.

Board Fully Constituted

The constitution of the Board of Conciliation and Investigation established in August to deal with a dispute between the Chrysler

Corporation of Canada, Limited, Chatham, Ont., and its employees, members of Local 127, United Automobile Workers of America (Labour Gazette, September, 1942, pages 1004-1005) was completed during the month of September. The personnel of the board is as follows: the Honourable Mr. Justice J. G. Gillanders, of the Supreme Court of Ontario, Toronto, appointed on the joint recommendation of the other two members; Mr. Drummond Wren, also of Toronto, appointed on the nomination of the employees; and Mr. J. A. McNevin, K.C., Chatham, appointed on the nomination of the employer.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

On September 1, pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, Mr. J. P. Nicol, Industrial Relations Officer of the Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dismissal of eighteen employees of Border Cities Industries, Limited, Windsor, Ont., allegedly on account of their membership in and activity on behalf of Local 195, United Automobile Workers of America. The report of the Commissioner, received on September 28, indicated that the allegations were well-founded in respect to the dismissal of five of the employees in question and recommended the reinstatement of these five employees; subsequently an order to this effect was issued by the Minister of Labour.

On September 9 an Industrial Disputes Inquiry Commission composed of Prof. W. G. McBride, of McGill University, Montreal, chairman, Dr. F. W. Gray, Sydney, N.S., and Mr. A. L. Smith, K.C., Calgary, Alta., was appointed to inquire into the facts and circumstances pertaining to an application of District 18, United Mine Workers of America, for an order of the National War Labour Board requiring Canadian Collieries (Dunsmuir), Limited, to increase wage rates generally by 30 per cent at the company's Namaimo and Cumberland Mines on Vancouver Island, B.C., and to report thereon and also with respect to any other matters affecting the coal mining industry in the region covered by District 18, United Mine Workers of America, as might be referred to the Commission by the Minister of Labour, the Commission to have full regard to the Wartime Wages Control Order in Council, P.C. 5963.

On September 14 His Honour Judge I. M. Macdonell, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between De Havilland Aircraft of Canada, Limited, Toronto, and its employees, members of Local 112, United Automobile Workers of America, in connection with which an application had been received in August for the establishment of a Board of Conciliation and Investigation (Labour Gazette, September, 1942, page 1004). Pursuant to the provisions of Section 5 of Order in Council P.C. 4020, as amended, the Commissioner also was authorized to investigate the dismissal of three of the company's employees, allegedly on account of their union membership and activity. Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, previously had been appointed a Commissioner to investigate the dismissal of one of these employees (Labour Gazette, September, 1942, page 1005), but the illness of the employee had prevented Commissioner Ainsborough from conducting the investigation prior to the appointment of Commissioner Macdonell.

On September 11 Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between Engineering Products of Canada, Limited, Montreal, and its employees, members of the Metal Trades Council of Montreal and Vicinity, in connection with which an application had been received in August for the establishment of a Board of Conciliation and Investigation (Labour Gazette September, 1942, page 1004).

On September 19 Mr. H. R. Pettigrove, Industrial Relations Officer of the Dominion Department of Labour, Fredericton, N.B., was authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Atlantic Sugar Refineries, Limited, Saint John, N.B., and its employees, members of Local 20, Sugar Refinery Workers' Union, affiliated with the Trades and Labour Congress of Canada, in connection with which an application had been received in August for the establishment of a Board of Conciliation and Investigation (Labour Gazette, September, 1942, page 1004).

Commission Appointed under Section 65 of Statute

On September 14, pursuant to the provisions of Section 65 of the Industrial Disputes Investigation Act, a Commission was appointed under the provisions of Part I of the Inquiries Act to inquire into the facts and circumstances pertaining to applications submitted on behalf of certain employees of the Algoma Steel Corporation, Limited, Sault Ste Marie, Ont., members of Local 2251, United Steelworkers of America, and certain employees of the Dominion Steel and Coal Corporation, Limited, Sydney, N.S., members of Local 1064, United

Steelworkers of America, to the Ontario Regional War Labour Board and the Nova Scotia Regional War Labour Board, respectively, for increases in basic rates of pay. While findings and directions had been issued by the respective Regional War Labour Boards in this connection, representations were made on behalf of the aforementioned employees to the effect that further consideration of the applications was warranted. The Commission was instructed to confer with the Minister of Labour for Canada (who is chairman of the National War Labour Board) and with the Ministers of Labour for Ontario and Nova Scotia (who are chairmen of the respective Regional War Labour Boards) and, in its report, to advise what adjustments, if any, in the wage rates of the employees concerned are justified under the terms of the Wartime Wages Control Order in Council, P.C. 5963. The personnel of the Commission is as follows: Mr. F. H. Barlow, K.C., Toronto, chairman; Mr. King Gordon, Montreal; and Mr. J. T. Stewart, St. Thomas, Ont.

Other Reports of Industrial Disputes Inquiry Commissioners

Reports were received on September 3 from Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, Vancouver, who had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate disputes involving the Royal View Mine and the Chester Mine, both of Lethbridge, Alta., and their respective employees, members of Locals 7302 and 7751, United Mine Workers of America (Labour Gazette, September, 1942, page 1003). The Commissioner reported that he had been successful in effecting mutually satisfactory settlements of the disputes whereby the interested parties would enter into new collective agreements providing for the upward revision of wage rates. The agreements were approved by the National War Labour Board and the employees withdrew their applications for the establishment of Boards of Conciliation and Investigation. Summaries of the agreements will be found in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

A report was received on September 8 from Mr. H. R. Pettigrove, Industrial Relations Officer of the Dominion Department of Labour, Fredericton, N.B., who had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between Halifax Shipyards, Limited, Halifax, N.S., and its employees, members of Local 361, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, and Lodge 1250, International Association of Machinists (Labour Gazette, September, 1942, pages 1005-1006). At the end of the month, the Commissioner's report was before the Minister of Labour for consideration.

A report was received on August 8 from Mr. R. H. Hooper, Industrial Relations Officer of the Dominion Department of Labour, Winnipeg, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Dominion Bridge Company, Limited, the Manitoba Bridge and Iron Works, Limited, and the Vulcan Iron Works, Limited, all of Winnipeg, and their respective employees, members of Lodge 646, International Association of Machinists, Local 126, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, Local 174, International Moulders and Foundry Workers' Union of North America, and Local 565, International Brotherhood of Blacksmiths, Drop Forgers and Helpers (Labour Gazette, September, 1942, page 1003). In his report the Commissioner indicated that, in his opinion, the circumstances did not warrant the establishment of a Board of Conciliation and Investigation. Subsequently the interested parties were notified that a board would not be established.

A report was received on September 12 from Mr. Bernard Rose, K.C., Montreal, who had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between the Quebec Asbestos Corporation, Limited, East Broughton, P.Q., and its employees, members of the National Catholic Union of Asbestos Workers of East Broughton (Labour Gazette, August, 1942, page 884). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute whereby the interested parties would enter into a collective agreement. The agreement is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

A report was received on September 22 from Mr. J. S. McCullagh, Industrial Relations Officer of the Dominion Department of Labour, Ottawa, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between Algoma Ore Properties, Limited, Wa Wa, Ont., and its employees, members of Federal Labor Union 23159, American Federation of Labor (Labour Gazette, September, 1942, page 1005). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute whereby the interested parties would enter into a collec-

tive agreement. The agreement is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue. Subsequently the employees withdrew their application for the establishment of a Board of Conciliation and Investigation.

A report was received on September 26 from Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, Vancouver, who had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate a dispute between West Coast Shipbuilders, Limited, Vancouver, and its employees, members of Local 1, Boilermakers and Iron Shipbuilders' Union of Canada (Labour Gazette, September, 1942, page 1005). At the end of the month the Commissioner's report was before the Minister of Labour for consideration.

A report was received on September 29 from Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Whitby Malleable Iron and Brass Company, Limited, Whitby, Ont., and its employees, members of Local 2458, United Steelworkers of America (Labour Gazette, September, 1942, page 1003). The Commissioner's report indicated that he had been successful in effecting a mutually satisfactory settlement of the dispute whereby the interested parties would enter into a collective agreement. The agreement is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue. Subsequently the employees withdrew their application for the establishment of a Board of Conciliation and Investigation.

Other Settlements

On September 1 the Chrysler Corporation of Canada, Limited, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America, executed a collective agreement based upon the recommendation of a Board of Conciliation and Investigation established to deal with a dispute between the parties (Labour Gazette, April, 1942, pages 396-398). A summary of the agreement will be found in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

Full particulars concerning the settlement of a dispute between the R.C.A. Victor Company, Limited, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's R.C.A. Union, will be found in the report of a Board of Conciliation and Investigation which is published immediately hereunder.

Report of Board in Dispute between R.C.A. Victor Company, Limited, Montreal, P.Q., and its Employees

On September 14 the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the R.C.A. Victor Company, Limited, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's R.C.A. Union (Labour Gazette, September, 1942, page 1004). Attached to and forming part of the board's report is a copy of a collective agreement executed by the interested parties on September 12.

The personnel of the board was as follows: the Honourable Mr. Justice M. B. Archibald, of the Supreme Court of Nova Scotia, Halifax, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Drummond Wren, Toronto, appointed on the nomination of the employees; and Mr. J. J. Perrault, Montreal, appointed on the nomination of the employer.

The texts of the board's report and the collective agreement are printed below.

Report of Board

To the Honourable
Humphrey Mitchell, P.C., M.P.,
Minister of Labour,
Ottawa, Canada.

Re Industrial Disputes Investigation Act and re dispute between R.C.A. Victor Company, Limited, Montreal, P.Q., and its employees members of the Montreal Metal Trades Council's R.C.A. Union.

Sir:

The Board of Conciliation and Investigation, established in the above matter, has the honour to report that it met at the Windsor Hotel, Montreal, P.Q., on the 2nd, 3rd, 10th, 11th and 12th days of September, 1942.

At the hearings, the Company was represented by Mr. E. C. Grimley, its President, Col. H. J. Trihey, Chairman of its Board of Directors, and by Mr. D. McCallum, its Personnel Manager. The employees were represented by Mr. Victor Walker, President of the Montreal Metal Trades Council's R.C.A. Union, and by Miss Lea Roback and Mr. L.

Levasseur, members of the Negotiating Committee of the said Union.

At the first session of the Board, the representatives of the Company took the objection that the Montreal Metal Trades Council's R.C.A. Union was not authorized to negotiate an agreement on behalf of the employees of the R.C.A. Victor Company, Limited, Montreal, P.Q. After much discussion, the representatives of both parties requested that a vote of the employees be taken, to ascertain the wish of the employees in this regard, and that such vote be taken under the supervision of the proper officials of the Department of Labour, Canada. This vote was taken on Tuesday, September 8th, 1942, under the supervision of Mr. R. Trepanier, Industrial Relations Officer of the Department of Labour. The question submitted to those employees entitled to vote, was:—

"Is it your wish that the Montreal Metal Trades Council's R.C.A. Union act as bargaining agent on your behalf in negotiations with your employer, the R.C.A. Victor Company, Limited?"

The result of the vote showed that 1185 employees voted "yes," 122 voted "no," and there were 49 spoiled ballots. Annexed to and forming part of the report, marked as Schedule "A" and identified by the signatures of the members of the Board, is a summary of the result of the vote so taken, together with a sample of the ballot and certificates of the scrutineers.

At the suggestion of the Board, representatives of the parties to the dispute met on the 9th, 10th and 11th days of September, 1942, for the purpose of negotiating an agreement. These negotiations were continued throughout the afternoon and evening of September 11, in the presence of the Board, and, as a result, an agreement was reached. An original copy of this agreement, marked as Schedule "B" and identified by the signatures of the members of the Board, is annexed to and forms part of this report.

In reporting this happy result, the members of the Board wish to commend the representatives of both parties for the careful and thorough presentation of their arguments and for the spirit of moderation, fairness and conciliation in which the negotiations were conducted. The members of the Board are grateful, also, for the co-operation they received from Mr. Trepanier, Industrial Relations Officer at Montreal, for the Department of Labour; and for the courtesy and assistance they received from the representatives of the parties concerned.

Respectfully submitted.

(Sgd.) M. B. Archibald,
Chairman.

(Sgd.) J. J. Perrault,
Member.

(Sgd.) Drummond Wren,
Member.

Montreal, P.Q.,
September 12, 1942.

SCHEDULE "B"

Memorandum of a collective agreement entered into by and between the R.C.A. Victor Company Limited, herein represented by E. C. Grimley, its President, and G. J. White, its Secretary, both for the purposes hereof duly authorized; hereinafter called the "Company," and The Hourly Paid Employees of the said R.C.A. Victor Company Limited, acting and represented by Metal Trades Council's RCA Victor Union, their negotiating agent, for the purpose hereof duly authorized; hereinafter called the "Union."

1. *General Purpose*

The "Company" and the "Union" declare that the purpose of this Agreement is to provide for the maintenance of good relations between them as they believe that the maintenance of good relations between Employer and Employee is essential to the due execution of war contracts and the production of necessary materials therefor, and that particularly in wartime the safety of the nation must be the first consideration of all patriotic citizens. Consequently all the provisions of this Collective Agreement extend to obligate and benefit all the Hourly-Paid Employees of the Company.

2. *Co-operation*

The "Company" and the "Union" hereby promise to co-operate to the fullest extent for the purpose of maintaining efficient and uninterrupted production. For this purpose, a Joint Production Committee composed of equal representation by the employees and the Company shall be set up. The sole function of this Committee will be to study and recommend methods of increasing production.

3. *Employees Right to Organize*

The employees shall be free to organize in Trade Unions, free from any control by the Company or its agents, and the Employees, in the exercise of their right to organize, shall use neither coercion nor intimidation of any kind to influence any employee to join their organization.

4. *Hours of Work*

(*a*) The present regular working week of 48 hours shall be continued, except in the case of firemen, watchmen and janitors for whom the regular working week shall be fifty-six (56) hours, pending approval of change by the Regional War Labour Board.

(*b*) A schedule shall be arranged by the Company to allow employees to return tools to the tool crib before the end of each shift.

(*c*) Late starting shall be penalized to the amount of fifteen (15) minutes for lateness in excess of three (3) minutes of each quarter of the hour; i.e., for lateness from four (4) to eighteen (18) minutes the penalty will be fifteen (15) minutes; from nineteen (19) to thirty-three (33) minutes the penalty will be one-half hour, etc.

(*d*) Should war production require more than a reasonable amount of overtime, the Company will discuss the advisability of employing second and third shifts with the Shop Committee.

5. *Overtime*

(*a*) Any time worked on the following days shall be paid for at overtime rates: New Year's Day, Good Friday, Empire Day, St. Jean Baptiste Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, and all Sundays, or the alternative day of rest.

(*b*) Any day declared by statute or decree to be observed as one of the holidays mentioned above, should the latter fall on a Sunday, shall be paid for at overtime rates.

(*c*) Except in emergencies, employees shall be notified before lunch period of the necessity to work overtime on that day.

6. *Classification of Employees*

All hourly-paid employees of the Company shall be classified as follows:

(*a*) Beginners

A beginner shall be an employee who has had no previous shop experience. An employee hired as a beginner shall be so classified for three months from the date of employment and at the end of that time shall either be classified according to the Company's established classification or discharged. The Company may at its discretion promote or discharge a beginner at any time prior to the expiration of the said three months.

(*b*) Classified Employees

Every employee other than a beginner shall be classified according to the job classification established by the employer and shall be notified whenever that classification is changed. No discrimination on account of age or sex shall be made in classifying any employee.

The classification of an employee in accordance with the terms of this agreement, shall be done by the Company and, where there is a difference of opinion, in collaboration with the Grievance Committee. In case of a disagreement over any classification, the employee will be given an opportunity to show whether or not he can qualify for the classification which he believes he deserves, provided a vacancy in such an occupational classification occurs.

7. Names of foremen, assistant foremen, supervisors and group leaders constituting the permanent organization of each Department shall be posted on departmental notice boards in each department so that there may be no doubt as to the responsibility of all operators.

8. *Safety and Health*

The Company shall continue to make reasonable provisions for the safety and health of its employees during the hours of their employment. Protective devices, special wearing apparel and other equipment, which in the opinion of the Company is necessary to protect the employees from injury, shall be provided by the Company. Heating, ventilation and washroom facilities shall conform to all legal requirements.

9. *Rest Periods*

The Company shall allow all employees a ten minute rest wth pay in the morning and in the afternoon; shifts other than the day shifts shall be allowed two similar periods.

10. *Settlement of Disputes*

Any disputes arising out of disagreement or any grievance or misunderstanding which any employee or group of employees may desire to discuss or adjust with the Company shall be handled as follows:

(1) The employee may take the matter directly to his foreman with or without his committee man or, his committee man may take the grievance to the foreman.

(2) If a settlement is not reached within a reasonable time, the committee man may take the matter to the division superintendent.

(3) If a settlement is still not reached, the committee man shall report the matter to the Grievance Committee in writing, and the Grievance Committee shall discuss the matter with the Manager of Manufacturing. Such matters shall normally be discussed during working hours but lengthy negotiations for settlement of disputes shall be discussed outside of working hours.

(4) If a settlement is still not reached, the matter may be referred to an executive officer of the Company.

(5) All decisions arrived at between the Management of the Company and the Grievance Committee shall be final and binding upon the Company, the Shop Committee, and the employee, or employees.

(6) In the event that no agreement is reached the two parties will refer the matter to an arbitration committee, one of whom shall be appointed by the Company, another shall be appointed by the Grievance Committee, and the third, the Chairman, shall be agreed to by the other two. In the event that a decision is not reached within seven days, the Minister of Labour shall be asked to appoint a Chairman, not an employee of his Department.

(7) During the term of this agreement the Company agrees that there shall be no lockout and the workers agree that there shall be no slow down, strike or other stoppage or interference of work.

11. *Promotion, Lay-off or Increase of Staff*

(*a*) In all cases of promotion, lay-off or increase of staff the following factors shall be considered:

(1) Ability, skill and experience
(2) Length of service.

Where other factors are relatively equal, length of service shall govern. These rules for promotion, lay-off or increase of staff shall only apply to an employee who has completed at least three months of continuous service.

(*b*) The Company agrees that any alleged case of injustice in the application of these rules shall be a discussable grievance as provided for by Clause 10.

12. *Discharges*

In the event that an employee has been discharged and alleges he has been unjustly dealt with, he may ask for and receive from the employer the reasons for dismissal. Such discharge shall constitute a case arising under the method of adjusting disputes provided for by Clause 10.

13. *Recognition*

The Company recognizes the Metal Trades Council's R.C.A. Victor Union as the sole bargaining agency in respect of all its hourly-paid employees, as long as they represent a majority thereof.

14. *Personnel of Committees*

The Union Shop Committee agrees to notify the Management of the Company of the names of the members and officers of the Shop and Grievance Committees elected or appointed by the employees, and also of any changes that may take place from time to time. The Shop Committee will support the enforcement of Company Rules and Regulations on the part of the employees. Shop Committee members who are required to leave their jobs for the performance of Union business, shall obtain permission from their foremen before doing so.

15. *Leave of Absence*

(*a*) The Company will give fair consideration to granting reasonable leaves of absence, without pay, to delegates of the Union, not exceeding three in number, when necessary for the transaction of business of the R.C.A. Victor Union.

(*b*) Any employee elected as a full-time Union Official shall be given special consideration as to re-employment upon termination of his term of office. If at such time, a position suitable to his experience and ability is open, he shall be given preference over other applicants. The Union also agrees to discuss with the Management the nominees for such offices.

16. *Renewal and Termination*

(*a*) This Agreement which became effective on the date of execution, shall remain in full force and effect for a period of one year, unless changed by mutual consent of the parties signatory hereto. It shall remain binding for a further period of one year unless either party shall give to the other written notice of termination at least sixty days before the termination of the Agreement.

(*b*) In the event of written notice of termination having been given by either party, as provided for in Clause (*a*), negotiations shall be carried on during the period of notice of termination with a view to arranging another Agreement.

Signed at the City of Montreal, in the Province of Quebec, on the twelfth day of September, 1942.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

REPORTS have been received of five cases heard recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the Labour Gazette, June, 1942, page 666, and in previous issues, and the seventh report of the proceedings of the Board covering the period from October 1, 1936, to September 30, 1939, was recently issued as Bulletin No. 14 in the Industrial Relations Series published by the Department of Labour.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war of 1914-18. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following Railway Brotherhoods: The Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 501—Canadian National Railways (Atlantic Region) and the Order of Railroad Telegraphers.—This case dealt with a controversy over the application of Article 5, Clause "B" of the Telegraphers' Schedule. According to the joint statement of facts, the ticket agent at Campbellton, N.B., was being required to commence duty at 10 a.m., was allowed two hours for a meal period between 1.30 and 3.30 p.m., and was then excused for the day at 8 p.m.

Clause "B" of Article 5 of the Telegraphers' Schedule provides that the hours of duty of all agents shall commence between the hours of 6 a.m. and 8.30 a.m. Accordingly the employees contend that no agent, except ticket agents, can be kept on duty after 5.30 p.m., unless overtime payment is made.

Ticket agents, according to Clause "J" of the same article, may have their hours of service arranged to provide eight hours duty within ten, including meal periods. This would set their quitting time at not later than 6.30 p.m. unless overtime payment was made, according to the employees' contention.

The ticket agent at Campbellton, being required to work from 6.30 p.m. to 8.30 p.m., made a claim for overtime worked. This claim was denied him. The employees contended that the overtime claimed should be paid.

The Company, in support of its contention, quoted previous rulings dealing with the matter, and contended that under the schedule ticket agents could be allowed to have irregular starting hours

The Board's decision denied the claim of the employees.

Case No. 502—Temiskaming and Northern Ontario Railway and the Order of Railway Conductors and the Brotherhood of Railway Trainmen.—Claim of a conductor and crew for "runaround" at Englehart.

In this case the conductor and crew concerned stood first out and came on duty, but were not despatched until after the crew which stood second-out. The conductor accordingly claimed a "runaround".

The employees, in asking payment of his claim, quoted Article 26 (*a*) of their schedule which reads: "Through freight crews will be run, first-in, first-out of the terminals in their respective sub-divisions." It was emphasized that the Rule reads "will be run first-in, first-out," not "called first, or on duty first."

The Railway contended that where crews are called and come on duty in their proper turn no "runaround" occurs. In the particular case, the Company declared, the locomotive for the Conductor's train was found on being coupled to have its steam heat connection frozen and was returned to the shop to have this condition corrected. Before the engine returned, the second crew's train was ready to go and was despatched.

The Board sustained the employees' contention for this particular case but suggested that the parties confer together with a view to reaching an understanding to avoid claims of a similar nature.

Case No. 503—Temiskaming and Northern Ontario Railway and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen—Claim of a conductor and crew for wayfreight rates, having been required to handle wayfreight while on auxiliary service.

The conductor and crew were called at Englehart for auxiliary service, and proceeded

to the derailment. While clearing the wreck, an empty box car was required to transhipa car of lumber. The conductor and crew were instructed to go to Larder Lake, pick up a box car there and return to the working point. The box car contained a quantity of freight, and the station staff not being on duty the train crew were required to unload this freight into a shed, before removing the car to the working point. Accordingly the conductor and crew, on returning to Englehart, claimed 575 miles at wayfreight rates; but were paid at through freight rates.

Article G of the Schedule states that road conductors and trainmen performing more than one class of road service in a day or trip "will be paid for the entire service at the highest rate applicable to any class of service performed."

The employees claimed that the conductor and crew, having handled wayfreight in addition to their other services, were entitled to wayfreight rates.

The Company contended that the work performed by the train crew in this case was incidental to their duties in wreck service. It was not performed for the purpose of getting freight into the shed for delivery, but for the express purpose of securing a car to continue clearing the wreck. It was pointed out that the freight unloaded in this case consisted of only three small pieces having a total weight of less than fifty pounds. The Railway stated that it understands the term "wayfreight service" to apply to a crew operating between terminals or designated points, loading and/or unloading freight en route. A train crew in wreck service, it was claimed, may be required to perform any class of service ordinarily performed by train crew incidental to the clearing of a wreck, and such incidental work does not constitute another class of service.

The Board's decision was that in view of the circumstances and the fact that the employees were engaged in auxiliary service the claim of the employees was not sustained.

Case No. 504—Temiskaming and Northern Ontario Railway and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.—Claim from a conductor and crew for "deadheading," Noranda to Timmins.

This crew, which had been working on passenger service between Swastika and Noranda, answered a bulletin calling for applications for crews to operate out of Timmins, and were assigned to the new set of runs.

The employees contended that the conclusion of their old assignment left the crew tied up at Noranda. Their new assignment opened the following day with a lay-off day, and on this day they were ordered by the Railway to "deadhead" to Timmins. The employees claimed that the "deadheading" was not a voluntary movement on the part of the crew in the act of exercising seniority, and that consequently they should be compensated for 153 miles, passenger rates, according to Article 6, paragraphs 1 and 2 of their schedule.

The Company contended that the conductor and crew were "deadheading" to exercise seniority rights, and that according to the last paragraph of Article 6 they were not entitled to compensation. Reference was made to decisions in similar cases, Nos. 475 and 480. (Labour Gazette, September 1939, p. 905, and November 1939, p. 1101).

The Board denied the employees' contention.

Case No. 505—Temiskaming and Northern Ontario Railway and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.—Claim of conductors and trainmen on certain trains that they were being improperly paid.

According to the joint statement of facts, the three crews concerned were assigned to certain trains operating between Timmins, Noranda and Swastika under a schedule which caused each crew to sometimes handle two trains in one day. The crews were being paid on a continuous time basis.

The employees contended that they were being improperly paid, and that they should be paid on the basis of two separate days. They based this claim on Interpretation No. 8 of Article B and C of their Schedule, which reads that a passenger crew operating a "turnaround" run of 150 miles or over one way shall be paid on the basis of two separate days.

The Railway contended that Interpretation No. 8 should not apply, claiming that the assignments in this case were not "turnaround" runs since the crews did not return to the starting point.

The Board decided that the contention of the employees should not be sustained.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1942

DURING the month of September the number of strikes and lockouts recorded, the number of workers involved and the resulting time loss in man working days were all substantially down from the corresponding figures for August, 1942. There were 43 disputes during September, involving 13,316 workers and causing 37,838 days time loss, as compared with 59 disputes involving 21,795 workers and 53,535 days time loss in August, 1942, and 29 strikes involving 10,773 workers and 82,463 days time loss in September, 1941. Most of the strikes were terminated within a short time but several disputes involved a considerable number of workers and caused a large percentage of the time loss. These were tobacco factory workers in Montreal, P.Q.; saw and planing mill workers at Rimouski and Priceville, P.Q.; salmon fishermen at Fraser River, B.C.; paper mill workers at Beauharnois, P.Q.; and freight handlers at Halifax, N.S., and Saint John, N.B.

Seven disputes, involving 394 workers were carried over from August and 36 commenced during September. Of these 43 disputes, 42 were terminated during the month. Five resulted in favour of the workers, fifteen in favour of the employer, three were compromise settlements, four were partially successful and fifteen were indefinite in result.

At the end of the month there was one strike reported as in progress, namely laundry workers at Saskatoon, Sask.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such disputes are listed in this paragraph for a period up to one year after their removal from the table of current strikes. Information is available as to one dispute of this nature, namely: truck drivers and helpers, Toronto, Ont., October 7, 1941, to December 31, 1941.

The following comparative table gives information for August and September, 1942, and September, 1941.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*September, 1942.....	43	13,316	37,838
*August, 1942.....	59	21,795	53,535
September, 1941.....	29	10,773	82,463

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1942

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to September, 1942				
MANUFACTURING—				
Boots and Shoes—				
Shoe factory workers, Quebec, P.Q.	1	17	100	Commenced August 29, 1942; for payment of cost of living bonus weekly instead of monthly; terminated September 10; return of workers and replacement; in favour of employer.
Textiles, Clothing, etc.—				
Textile factory workers, Hull, P.Q.	1	20	20	Commenced August 29, 1942; against reduction in certain piece rates; terminated September 1; conciliation (federal); in favour of workers.
Miscellaneous Wood Products:				
Lumber yard workers, Fernie, B.C.	1	10	5	Commenced August 31, 1942; against income tax deductions; terminated September 1; return of workers; in favour of employer.
Lumber yard workers, Charlottetown, P.E.I.	1	10	20	Commenced August 31, 1942; for cost of living bonus; terminated September 2; replacement; in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1942—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to September, 1942—Concluded				
Metal Products—				
Foundry Workers, Hull, P.Q.	1	125	85	Commenced August 31, 1942; for increased wages and reinstatement of three workers; terminated September 1; conciliation (federal); in favour of workers.
Non-Metallic Minerals—				
Optical workers, Montreal, P.Q.	4	80	600	Commenced August 31, 1942; for increased wages and union recognition; terminated September 19; negotiations; partially successful.
Construction—				
Building and Structures—				
Carpenters and labourers, Quebec, P.Q.	1	132	132	Commenced August 29, 1942; for increased wages; terminated September 1; conciliation (federal); in favour of employer.
(b) Strikes and Lockouts Commencing during September, 1942				
Agriculture—				
Hop pickers, Sumas Prairie, B.C.	1	400	200	Commenced September 9; for increase in piece rates; terminated September 9; replacement; in favour of employer.
Logging—				
Fallers and buckers, Jordan Rivers, B.C.	1	30	30	Commenced September 24; for increased wages; terminated September 24; negotiations; in favour of employer.
Fishing and Trapping—				
Salmon fishermen, Fraser River, B.C.	11	*(a)* 3,260	10,000	Commenced September 21; against reduction in price for salmon; terminated September 30; negotiations; compromise.
Mining—				
Gold miners, Pickle Crow, Ont.	1	60	81	Commenced September 18; *re* meals after the night shift; terminated September 19; negotiations; compromise.
Coal miners, East Coulee, Alta.	1	61	61	Commenced September 24; *re* working conditions; terminated September 24; return of workers; in favour of employer.
Loaders, East Coulee, Alta.	1	10	10	Commenced September 26; against income tax deductions; terminated September 26; return of workers; in favour of employer.
Manufacturing—				
Tobacco and Liquors—				
Tobacco factory workers, Montreal, P.Q.	1	3,181	7,000	Commenced September 8; for increased wages and union recognition; terminated September 10; conciliation (federal); union agreement and joint application *re* wages to Regional War Labour Board; partially successful.
Textiles, Clothing, etc.—				
Dressmakers, Montreal, P.Q.	1	9	36	Commenced September 9; for union recognition; terminated September 12; replacement; in favour of employer.
Cotton factory workers, Montmorency Village, P.Q.	1	*(b)* 88	176	Commenced September 12; against promotion of a helper; terminated September 15; return of workers; worker whose place was being filled returned to work; indefinite.
Textile factory workers, Granby, P.Q.	1	185	275	Commenced September 14; against dismissal of worker; terminated September 14–15; conciliation (provincial); discharged worker transferred to other work; compromise.
Pulp and Paper—				
Pulp and paper mill workers, Kingsey Falls, P.Q.	1	58	900	Commenced September 9; for hourly rates of pay, cost of living bonus and union recognition; terminated September 26; conciliation (provincial); union recognition not granted: partially successful.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1941." The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned. Information as to particular disputes is taken for the most part from newspapers.

Great Britain and Northern Ireland

The *British Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in July was 74, and 5 were still in progress from the previous month, making a total of 79 disputes in progress during the month; 18,500 workers were involved in the disputes in progress during the month and the time loss was 42,000 working days.

Of the 74 disputes beginning in July, 30 arose out of demands for increased wages and 19 over other wage questions; 4 over working hours; 13 over questions as to the employment of particular classes or persons; 8 over other questions as to working arrangements. Final settlements were reached in 53 disputes, of which 11 were settled in favour of workers, 28 in favour of employers and 14 resulted in compromises; in 18 other disputes, work was resumed pending negotiations.

New Zealand

The number of disputes reported for the first three months of 1942, was 37, involving 42 firms and 8,570 workers. The time loss for this period was 28,068 man working days.

British India

Statistics for the first quarter of the year 1941, show 71 disputes in progress, involving 25,945 workers, with a time loss of 185,506 man working days. For the second quarter of that year, 121 disputes were in progress, involving 64,475 workers, with a time loss of 1,225,240 working days.

United States

The number of strikes beginning in August was 350, involving 80,000 workers in these new strikes. The number of man working days lost in all disputes in progress during the month was 450,000.

The Monthly Labor Review of the United States Department of Labor mentions the following among the larger disputes occurring in July: a strike of 8,000 employees of the American Car and Foundry Co. at Berwick, Pennsylvania, for a day for some and two days for others, after which work was resumed pending further negotiations, and the discharged men were reinstated; a one-day stoppage on July 31, of 5,000 employees of the General Motors Corporation at Pontiac, Michigan, owing to the picketing of the plant by workers involved in a dispute with a food dealers' association; a two-day strike, July 21 and 22, of about 3,000 truck drivers in St. Louis, Missouri, after which work was resumed pending further negotiations on the question of a wage increase; a three day strike of 2,800 employees of the Electric Storage Battery Company in Philadelphia and Crescentville, Pennsylvania, "over distribution of work in the interest of employees with seniority rights," which strike was settled by representatives of the company and the union.

A strike of 2,000 aircraft factory workers at Paterson, New Jersey, began Friday, August 28, and work was resumed Monday noon, August 31. The dispute was over job classifications under a recent agreement granting wage increases, and it was agreed to refer the classifications to a technical adviser of the Department of Labor.

Employees of a glass manufacturing firm at Vineland, New Jersey, went on strike September 8, demanding increases in wages; 2,400 workers were involved. Work was resumed September 18, and the dispute referred to the National War Labor Board.

A strike of several thousand workers at a munitions plant at East Alton, Illinois, began September 8, over the discharge of a union official and failure to negotiate a new agreement. A settlement was reached September 12, by which work was resumed and the matters in dispute referred to the National War Labor Board.

Some 10,000 shipyard workers at Mobile, Alabama, were involved in a dispute which began September 15, and was settled September 18. The stoppage occurred when the workers refused to pay a ferry fare to and from their work, as the company had previously provided this transportation free. Work was resumed September 19, and the question of the ferry charge referred to arbitration.

EXPANSION OF NATIONAL SELECTIVE SERVICE

Registration of Women—Release and Transfer of Workers—Recruiting of Harvest and Lumber Workers—Military Training for Students

IN an address on August 19, Prime Minister W. L. Mackenzie King indicated that the mobilization of man-power for all purposes, both military and industrial, would be concentrated in the Department of Labour (Labour Gazette, September, page 1018). Subsequently, it was announced that the transfer of military mobilization authority from the Department of National War Services to the Department of Labour would become effective on December 1.

Appointment of Arthur Eugene Pequegnat as Associate Director of National Selective Service—Civilian, and of Major-General Thomas Louis Tremblay and Major-General Harold J. Riley as Joint Associate Directors of National Selective Service brought important additions to the branch of the Department of Labour which is handling the man-power. Paul Goulet has become Senior Associate Director, in charge of the headquarters, or planning division of National Selective Service.

The announcement of these appointments indicates the steps being taken to extend the National Selective Service organization to meet the "tightening" manpower situation in Canada and to prepare for taking over the military call-up.

Elliot M. Little, Director of National Selective Service, recently stated that 100,000 additional workers would be required by the end of the year to meet industrial and military requirements, and forecast a severe curtailment of all non-essential industry to meet these demands.

A joint committee has been established between the Department of Munitions and Supply, the Wartime Prices and Trade Board, and National Selective Service to co-ordinate the recruitment and placement of man-power. Munitions and Supply will keep this committee informed of anticipated man-power needs. Curtailment of non-essential activities will be carried out by a special committee of the Wartime Prices and Trade Board, while National Selective Service will carry out the allocation of the released man-power.

Registration of Women

The Women's Division of National Selective Service has completed its first nation-wide registration of women. This registration, in addition to beginning the establishment of an inventory of woman-power, reveals many useful and hitherto unknown facts regarding the number of women in certain age groups, their availability for certain work, and their skills. Further, it provides information on the number of these women already employed both in essential and non-essential industries.

There were 258,583 women between the ages of 20 and 24 registered at Employment and Selective Service offices and Post Offices across Canada. An analysis of some of the figures shows that in the main industrial centres fewer women are unemployed than in the less highly industrialized regions. In all the Quebec and Ontario industrial areas combined, there were 18,671 women, between the ages of 20 and 24 inclusive, both married and single, not engaged in full-time work or now engaged at certain work but willing to change to other more essential war work. On the other hand, the prairie provinces revealed a total of 20,149 women who expressed willingness to undertake full-time work of any kind.

Release and Transfer of Workers

In two widely separated sections of Ontario and Quebec, action was taken to curtail the newsprint and gold mining industries, with a view to releasing men for other work and economizing the use of electric power in non-war industry. Even in the latter case, however, there was a man-power problem, in that it released men from their current work and created a local surplus for which preparations had to be made so that there would be a minimum loss of time.

Speaking at Niagara Falls and Toronto, Honourable Humphrey Mitchell, Minister of Labour, declared that there was an acute shortage in the essential base metal mining industry, particularly at Sudbury. Steps were taken to meet the crisis in two ways: Women were introduced for the first time into heavy mining operations by the employment of a group of women for surface work. Announcements by Labour Department officials revealed that this first action would be expanded widely until the majority of surface employees are women. The second and most significant step was the transfer of gold miners, on a vountary basis, from Timmins and Kirkland Lake camps.

The other major shift of man-power occurred at Thorold where reduction of power supplied to two mills, the Ontario Paper Company and Beaver Wood Fibre Company, reduced operations. Shortly after these first transfer moves, it was announced that five

paper mills in the Lac St. John area of Quebec would also be curtailed. An advisory committee of the newsprint industry is at present engaged in handling the man-power problem created in this area.

In both the mining and the paper industries, use of the recently created Manpower Advisory Committee was invoked. Under the plan sponsored by National Selective Service, these committees, equally representative of management and labour, were told of the looming changes and requested to work out details of the transfer of men. In each instance, numerous details of welfare and similar factors had to be worked out by the committees. The transfers involved such important issues as union membership, sickness and health insurance plans, housing, transportation, etc., which were worked out to the satisfaction of the employees and employers. These negotiations involved undertaking the establishment of plans by such groups as the Life Insurance Underwriters' Association which could form the basis for transfers of men in future undertakings. Basic theme of all the transfers, whether caused by Labour need or by power curtailment, has been the minimum of lost working time by the affected men.

Recruiting Harvest and Lumber Workers

In response to an appeal from provincial authorities in the Western Provinces, Department of Labour and National Selective Service officials took action to meet the shortage of help for grain harvesting. Through press releases and radio bulletins, farm workers in Eastern Canada who had completed harvest were asked to offer their services, and larger eastern Canadian universities also issued an appeal to students to volunteer for western harvesting. Some 5,000 men were sent to Saskatchewan and parts of Alberta. Travelling expenses to Western Canada and wages for harvesting work were paid to those who responded to the call.

The Department of Labour and National Selective Service officials have launched a drive to bring more than 100,000 men into bush, sawmill and pulp operations, in order to meet increasing demands in Canada and among the United Nations for timber, lumber and pulp for explosives and other uses.

Efforts have been made to try to move farmers and farm labourers and fishermen into seasonal bush and sawmill work as the harvest season ended. Co-operation of Provincial Departments of Agriculture, Lands and Forests, and Mines and Resources, in addition to municipal officials, has been enlisted to get the message across to farmers that Selective Service regulations made it feasible for farmers and hired men to move into off-season employment without changing their agricultural status.

Military Training for Students

The present position of university students in the man-power scheme was outlined by L. Austin Wright, Assistant Director of National Selective Service, in an address to the faculty and student body of Queen's University at Kingston, on October 17. Mr. Wright pointed out that a recently enacted Order in Council provided that every male student of a college or university over the age of 20 must pass a physical examination at the beginning of the term. If the student is physically fit, he must enroll in the Canadian Officers' Training Corps or other training organization approved by the District Officer Commanding. The student must answer a call to military service if he refuses to take the training, or does not perform the training to the satisfaction of the D.O.C., or fails in his examinations. It is also provided that no student may change courses without the approval of the college authorities and the D.O.C., and then may change only with definite relation to the national interest.

Accidents reported to The Workmen's Compensation Board of Ontario in 1941 amounted to 113,822 cases, of which 456 were fatal, according to a bulletin issued by the Industrial Accident Prevention Associations of Ontario. It is noted that the increase in total accidents reported was 40 per cent over 1940 figures, while fatal cases increased by 20 per cent. The bulletin also states that the Chairman of The Workmen's Compensation Board is of the opinion that employers are now reporting many minor accidents, a high percentage of which involve either no payments whatsoever or payments for medical aid only, without payments for compensation to the injured worker.

During September, accidents reported to the Board totalled 11,965, which included 27 death cases. This compares with 11,142 accidents, including 28 fatalities, in the previous month. Compensation and medical aid paid by the Board during the same period amounted to $754,347.51, with $140,605.29 of this for medical aid alone.

The Co-operative League of the U.S.A. reports that there are 18,000 consumer co-operative associations in the United States with over two million members and an annual turnover in business of over $1,000,000,000.

MOBILIZATION OF MANPOWER IN GREAT BRITAIN

I.L.O. Publishes Survey on British Experiences in Wartime Transference of Labour

LABOUR reserves available for the war industries of Britain have been "nearly exhausted," and to satisfy the requirements of war production from now on it will be "necessary to rely to an increasing extent on a redistribution of the existing munitions labour supply and on a new drive to make the most efficient use of the services of each war worker," it is declared in a report published recently by the International Labour Office.

Although there are still untapped sources of supply in the less essential industries and among the unoccupied population, the report declares, these sources are being drained by a steady tightening of the measures already taken to mobilize men and women for war work. It seems improbable, the report adds, that these measures can bring "any appreciable increase in the total labour force available for war industries" in view of the necessity of meeting the "tremendous needs" of the armed and auxiliary services.

The report is the latest in the I.L.O.'s continuing series on employment and unemployment, and is published under the title of "Wartime Transference of Labour in Great Britain." Its author is Elizabeth Mayer Johnstone, a member of the Employment and Labour Conditions section of the I.L.O., and it was prepared at the request of E. J. Phelan, acting director of the I.L.O., following a suggestion of a tripartite Canada-United States meeting on labour supply problems held under I.L.O. auspices.

A foreword explains that the report was completed and revised by the author during a stay of three months in Great Britain.

Sweeping Changes in Employment

For security reasons, the study explains, "statistical analysis of the movement of labour to war work is still excluded." Nevertheless, it estimates that out of an active population of some 33,000,000, at least 75 per cent are now effectively occupied in the armed forces, in war industry, or in other work or service. In less than three years of war, between 4,000,000 and 5,000,000 persons, it says, "have been shifted from their homes and transferred to war work in other parts of the country."

"Persons never before employed in industry and never before away from home have been brought into war factories by the hundreds of thousands," the study points out, "while, in addition, other hundreds of thousands of workers have been transferred from less essential to essential work. The limited number of highly skilled workers are gradually being shifted into the work where their skills can serve the industrial effort to best advantage."

The policy involved in the transference of labour from peacetime to war production has now reached the stage at which its general outlines are virtually complete, the study declares.

"The Government possesses the necessary powers for mobilizing manpower for war industries. The controlling principles, the methods and the machinery for directing men and women into jobs where they are most needed have been clearly established. The collaboration of labour and management has been secured. While changes will certainly be made in the future, as they have been in the past, the general pattern of action is readily apparent from the experience of these last years of war."

Difficulty of Finding Unused Labour Reserves

From now on, the study says, the principle work of the labour supply machinery will be the continuing transference of workers among the basic industries and among the undertakings within each of these industries. Continuous mobility, it says, is "an essential element in the labour force assembled for the munitions industries." This, it says, can be secured only by persistent effort.

"It means reaching deeply into each plant to analyse its labour requirements in order to uncover possible unused reserves of labour power. It necessitates further action to eliminate the obstacles to transference from one war industry to another and from one job and plant to another in the same industry. It requires added effort to improve the techniques of making the transfers which are clearly in the national interest."

In its 163 pages, the report provides a survey of the British manpower mobilization program from the early days of the war until recent weeks. The methods by which this mobilization has been effected, the study points out, "are of immediate practical interest to other nations now engaged in mobilizing their manpower for total war." (A brief account of the British labour mobilization program appeared on page 931 of the August Labour Gazette.)

The powers of the British Government to control the distribution of the country's

human resources are very great, the author notes. But until comparatively recently, she says, the Government has found it unnecessary to exercise its compulsory powers, and even to-day full use is not being made of them.

Importance of Voluntary Acceptance of Program

It has been the general policy, she explains, to rely on the "co-operative will" of workers and employers to plan and put into effect the whole manpower program. The development of this "co-operative will," she says, has not been "an easy or short-term task," and as a result labour redistribution policy has developed "in a rather piece-meal manner which has often precluded the possibility of obtaining a comprehensive view of the manpower situation as a whole." But, she points out, Ernest Bevin, the Minister of Labour and National Service, "has often emphasized the futility of speeding the evolution of labour supply policy at the expense of the understanding, acceptance and participation of labour and management in the execution of the policy."

The study, which the I.L.O. says it hopes "will provide a useful and suggestive survey of the evolution of policy and practice in a country which has reached a relatively advanced stage in the mobilization of its manpower," is divided into four principal sections. These discuss incentives to labour transference, the direct organization of transference, social problems connected with transference, and its administration. A brief final section is devoted to "the present situation."

In her consideration of the social problems involved in transference, the author expresses the opinion that "there is an ingrained immobility among British workers which has no exact counterpart among most other workers, and which has tended to slow down the tempo of transference." In addition, she points to other factors limiting the mobility of the British worker such as wage differentials and variable living and welfare conditions.

While the Government was slow to recognize these factors, she says, it has now—largely because of pressure from the trade union movement—accepted "the principle that everything possible must be done to assure that conditions of life and work for transferred war workers are satisfactory." The report describes in detail the measures that have been taken in line with this principle to establish national minimum standards of income and living and working conditions.

COST OF LIVING STABILIZED IN THE UNITED STATES

Control of Wages, Salaries, Prices, Profits and Rents Introduced to Check Inflation

AN executive order intended to stabilize the cost of living in the United States was signed on October 3 by President Roosevelt. The order was issued immediately after the passing by Congress of the "anti-inflation" bill which the President had requested a month previously (LABOUR GAZETTE, September, 1942, p. 1031) and includes the following important points:

1. Wage rates are stabilized at September 15 levels, with allowance for some adjustments.
2. A limit of $25,000 is placed on salaries after taxes and certain other allowances have been deducted; in most cases no increases are to be granted to salaries already in excess of $5,000.
3. Price control, which formerly had included only manufactured wholesale and retail goods, is extended to include most farm products.
4. Nation-wide rent ceilings are ordered.
5. "Unreasonable or exorbitant" profits are to be prevented.
6. An Office of Economic Stabilization is established, whose director is charged with the duties of developing an over-all economic policy, and issuing directives on policy to the Federal departments and agencies concerned.

Administration

The President announced the appointment as Director of Economic Stabilization of Mr. Justice James F. Byrnes, who resigned from the Supreme Court to accept the position. The Director is instructed under the terms of the Order to "formulate and develop a comprehensive national economic policy relating to the control of civilian purchasing power, prices, rents, wages, salaries, profits, rationing, subsidies and all related matters—all for the purpose of preventing avoidable increases in the cost of living, co-operating in minimizing the unnecessary migration of labour from one industry to another, and facilitating the prosecution of the war."

The actual administration of this vast program is divided amongst various government agencies (such as the National War Labor Board, the Department of Agriculture, and the Office of Price Administration). The

Director is to carry out his over-all policy by issuing directives to the various government agencies concerned.

He is to be assisted by a 14-man Economic Stabilization Board, whose members are to consist of eight high-ranking government agency heads and two representatives each of labour, management, and farmers.

Wage Stabilization Policy

The basis of the wage policy is that wage rates shall be standardized as nearly as possible at the levels prevailing on September 15, 1942. Private agreements between labour and management as to wage changes are not allowed to take effect unless approved by the Board. The Order, however, reaffirms the policy of the Federal Government to encourage free collective bargaining between employers and employees.

Administration of the wage policy is in the hands of the National War Labor Board, which consists of twelve members appointed by the President, four representing the public, four representing employees, and four representing industry.

The clauses of President Roosevelt's executive order which relate to wages are as follows:

"1. No increases in wage rates, granted as a result of voluntary agreement, collective bargaining, conciliation, arbitration, or otherwise, and no decreases in wage rates, shall be authorized unless notice of such increases or decreases shall have been filed with the National War Labor Board, and unless the National War Labor Board has approved such increases or decreases.

"2. The National War Labor Board shall not approve any increase in the wage rates prevailing on September 15, 1942, unless such increase is necessary to correct maladjustments or inequalities, to eliminate substandards of living, to correct gross inequities, or to aid in the effective prosecution of the war.

"Provided however, that where the National War Labor Board or the Price Administrator shall have reason to believe that a proposed wage increase will require a change in the price ceiling of the commodity or service involved, such proposed increase, if approved by the National War Labor Board, shall become effective only if also approved by the director.

"3. The National War Labor Board shall not approve a decrease in the wages for any particular work below the highest wages paid therefor between Jan. 1, 1942, and Sept. 15, 1942, unless to correct gross inequities and to aid in the effective prosecution of the war.

"4. The National War Labor Board shall, by general regulation, make such exemptions from the provisions of this title in the case of small total wage increases or decreases as it deems necessary for the effective administration of this order."

Higher Salaries Limited

Salaries also are to be controlled by the National War Labor Board under the Order. Salaries at present exceeding $5,000 a year are not to be increased without official approval, except in cases where the individual has been assigned to more difficult or responsible work. Neither are decreases to be allowed below the highest salary paid between January 1 and September 15, 1942, "unless to correct gross inequities and to aid in the effective prosecution of the war."

President Roosevelt had previously designated $25,000 as the highest net income that anyone should receive in wartime, after payment of all taxes. The following section of the Order deals with the matter of maximum salaries:

"In order to correct gross inequities and to provide for greater equality in contributing to the war effort, the director is authorized to take the necessary action, and to issue the appropriate regulations, so that, in so far as practicable, no salary shall be authorized to the extent that it exceeds $25,000 after the payment of taxes allocable to the sum in excess of $25,000. Provided, however, that such regulations shall make due allowance for the payment of life insurance premiums on policies heretofore issued, and required payments on fixed obligations heretofore incurred, and shall make provision to prevent undue hardship."

Salaries and wages are defined under the Order to include all forms of indirect as well as direct remuneration, including bonuses, additional compensation, gifts, commissions, fees, and any other form of remuneration.

Price Control

The principal development in the field of prices is that control is now applied to farm products as well as to other goods. Control of prices of other commodities, including all manufactured articles had been in effect since May, (An article on page 571 of the May 1942 Labour Gazette compares the Canadian system with the American system then in effect.) The new order extends control to prices of agricultural products and commodities manufactured from them, and directs that they be stabilized "so far as practicable" on the basis of levels which existed on September 15. The bill passed by Congress establishes a floor as well as a ceiling for farm prices.

Administration of the farm policy is jointly vested in the Secretary of Agriculture and the Price Administrator, with the Director of Economic Stabilization empowered to resolve any disagreement between them.

Action taken by the Price Administrator in immediate response to a letter from President Roosevelt freezes the prices of about 90 per cent of all food items for a preliminary 60-day period. The 10 per cent not covered consists chiefly of fresh fruits and vegetables and fresh fish.

The Price Administrator was also directed by the President to extend rent control, which previously had applied only to defence rental areas, to cover both urban and rural dwellings throughout the country.

Profits and Subsidies

A policy designed to prevent excess profits from contributing to an inflationary cycle is set forth in the Order. The Price Administrator, in fixing, reducing, or increasing prices, is empowered to determine prices "in such a manner that profits are prevented which in his judgment are unreasonable or exorbitant."

Provision is also made for the payment of subsidies. In a situation where the price ceiling is threatened, various government agencies may be directed to subsidize any type of commodity, or to purchase it for resale beneath the price limit. Such action may be taken "to insure the maximum necessary production, and distribution of any commodity, or to maintain ceiling prices, or to prevent a price rise inconsistent with the purposes of this Order."

Relation to Canadian Policy

It had been apparent for some time that rising commodity prices in the United States were making more and more difficult the maintenance of price ceilings in Canada, due to the close relationship in the economies of the two countries. Hence the establishment of wartime controls in the United States has been welcomed in Canada.

A comparison between the two systems indicates a marked similarity both in general policy and in the form of control established. One of the main differences lies in the field of administration. No single Canadian office has the over-all control which the American Office of Economic Stabilization has been given. In Canada authority is divided, wages being under the supervision of the War Labour Board whose chairman is the Honourable Humphrey Mitchell, while prices are controlled by the Wartime Prices and Trade Board which is responsible to the Minister of Finance, the Honourable J. L. Ilsley.

There is a difference also in the provisions regarding wages. As in Canada, wage adjustments may only be made where serious inequities exist. However no machinery has yet been established in the United States comparable to that of the Canadian cost-of-living bonus which insures that no appreciable price fluctuation may occur without being reflected in a corresponding adjustment in the amount of cost of living bonus paid.

President Roosevelt issued a statement with reference to the executive order which reads in part as follows:

"I am certain that from now on this substantial stabilization of the cost of living will assist greatly in bringing the war to a successful conclusion, will make the transition to peace conditions easier after the war, and will receive the whole-hearted approval of farmers, workers and housewives in every part of the country."

Co-operation in Canada

Designed to present a more complete picture of co-operative activity in Canada than has heretofore been available, a circular entitled "Co-operation in Canada" has been issued by the Economics Division of the Department of Agriculture.

The circular, written by J. E. O'Meara and Lucienne M. Lalonde, gives a resumé of the history of the co-operative movement in Canada, and the legislation under which the societies operate.

It gives tables showing the latest figures for farmers' organizations in Canada, which indicate an increase in activity among farmers' co-operatives during the year 1941. Business done during the year amounted to almost a quarter of a billion dollars, with membership close to the half million mark. Actual figures show that in 1941 there were 1,395 farmers' co-operative associations doing a total business of $242,158,305, an increase of about six million dollars over the 1940 total. Membership increased by 1,232 from the 1940 total, to reach a total of 451,685.

Membership in fishermen's co-operatives is estimated at 4,500, with a volume of business reported to be $2,645,698.

The circular describes also the progress of consumers co-operatives, co-operative credit societies, and miscellaneous types of co-operative organizations. It states that statistics on consumers co-operation have been difficult to obtain, but that a rough estimate places the number of co-operative retail stores at about 365. These have a membership of about 30,000 and do between four and five million dollars worth of business annually.

PRICE CONTROL IN CANADA DURING SEPTEMBER, 1942

Establishment of Industrial Division for Curtailment of Non-Essential Work —Setting-Up of Local Ration Boards—Simplification and Conservation—Allocation of Supplies—Price and "Squeeze" Adjustments

THE current work of the Wartime Prices and Trade Board reflects the fundamental problem of price control—the problem of physical shortages of materials and labour for civilian use.

The principal activities of the Board during September were:

(*a*) The establishment of an Industrial Division to prepare and direct plans for curtailment of non-essential activity with the purpose of releasing man-power for the war services and for war production;

(*b*) The extension of the program of simplification and conservation to additional articles made from metals, textiles, and other materials in short supply;

(*c*) The launching of a plan for setting up approximately 500 local ration boards throughout Canada to deal with local problems arising out of consumer rationing; and

(*d*) The adjustment of prices of civilian commodities, mainly with a view to maintaining and expanding supplies.

Industrial Division

Following the announcement by the Prime Minister in August that the Board had been directed to curtail or eliminate non-essential civilian activities until the point of minimum civilian requirements had been reached, an Industrial Division was set up which is to include and expand the work of the Simplified Practice Division. The new division is headed by R. F. Chisholm, formerly the Wholesale Trade Administrator for the Board.

The work of the Industrial Division will be to lay down the degree of curtailment which seems appropriate in given instances and to co-ordinate the direction and speed of the new program. The Division has asked each of the commodity and service administrators for the Board to draw up plans for his trade or industry.

In restricting civilian activity, the Board will collaborate closely with National Selective Service whose duties in this connection are to direct the man-power released from non-essential civilian activities into the most useful channels of employment or service. The Department of Munitions and Supply will also play a significant role in this program since it will endeavour to see that any suitable productive facilities made available are used for war purposes.

63621—3½

Simplification and Conservation

The program of simplification and conservation, which becomes increasingly important as the supply of materials and labour for civilian production grows short, was extended to more products using metals, textile materials, paper and other scarce materials. Several orders were passed prohibiting or restricting the use of metal in certain goods or cutting down or simplifying the production of articles which must necessarily be manufactured from metals.

Metals.—With respect to *metal containers,* one more size has been added to the list of sizes which have been eliminated for paint and varnish materials (A375, September 3). After October 30, 1942, metal containers may not be used for packaging safety razors or blades; and copper, with the thickness specified, may be used for plating only (A416, September 30). The manufacture of *metal windows* has been prohibited except on orders approved by the Administrator of fabricated steel and non-ferrous metals (A373, September 3). A production quota for *wire screen cloth* has been prescribed at 60 per cent of the yearly average of 1940-1942, and simplification measures introduced (A374, Sept. 3). The production of *safety razors* and of safety razor blades for domestic sale has been restricted to 70 per cent and 100 per cent respectively of 1940 domestic sales (A416, September 30). A further order on *typewriters* applied the 65 per cent sales quota to each month as well as to the year's sales. It also provided that sales to Class B consumers (aircraft, and other plants producing war goods) must be approved, and prohibited entirely sales to Class C consumers (transportation, communication systems, etc.) (A379, September 5).

The manufacture and importation of *farm machinery* and equipment for the coming year (November 1, 1942 to October 31, 1943), with the exception of a few articles, has been further restricted to certain classes, types and sizes with specified quotas. The new quotas are lower than those which applied during the current year. The quota for repair parts, however, has been increased (A395, September 17).

The simplification program has been extended to *electrical storage batteries,* the production of which is restricted to five types

of specified dimensions, plus one other type. All batteries are to be of one grade and to bear a date stamp, but no batteries are to bear a brand name unless such brand name was in use prior to the date of the order (A406, September 22). Specifications were set out for types and sizes of grey cast iron and malleable iron *pipe fittings,* not applicable however to fittings for electrical conduit and other specified heavy work (A390, September 11). Another order prohibited the use of fixtures using metal parts in the manufacture of *luggage bags,* or the use of exterior straps or buckles in the making of Gladstone bags (A408, September 24).

Metal, Paper and Textile Fabrics.—With a view to conserving these materials, simplification and conservation measures were applied to several articles. One order limited the number of designs of *bedding equipment,* standardized the sizes of equipment, and eliminated the manufacture of open coil bedsprings (A376, September 4). In the clothing field, colours and packaging of *circular knit hosiery* were restricted (A383, September 5), while *men's and boys' furnishings* were further simplified (A405, September 22).

Other simplification orders were concerned with *wooden pencils and pen-holders,* loose leaf sheets, indexes and forms (A384, September 5) and converted paper products (A389, September 11). With respect to wooden pencils, styles have been limited and crude rubber erasers and metal ferrules eliminated (A371, September 1). With certain exceptions, a secondary finish may no longer be applied, after present orders are completed, in the manufacture of certain *papers,* including uncoated book, litho, and offset papers, and writing bond, stationery and sulphite converting papers (A397, September 12).

Allocation of Supplies

Wool and Newsprint.—More direct controls were applied to the allocation of supplies of wool and newsprint. Under an order of the wool administrator, the amount of raw wool which may be put into process for different civilian uses, in the six months ending March 31, 1943, was limited to from 10 per cent to 25 per cent of the amount used for such production in 1941 (A402, September 18). Under a special Board Order, effective September 4, 1942, the newsprint administrator was given power to allocate production and shipments of newsprint (Board Order No. 170). The administrator will act as co-ordinator with respect to all the major problems affecting the industry, especially those arising from diversion of electric power to war industries and from direct restrictions on pulpwood production. The administrator has also been given power to effect a distribution of the burdens and benefits resulting from such allocation among manufacturers.

Fuelwood.—The use of fuelwood in the Vancouver and Victoria areas in British Columbia has been placed under a system of rationing, owing to the critical condition of supplies. A limit has been set to the number of units of sawdust or cords of millwood which may be delivered to, or stored by, consumers at any time in these areas. To ensure more efficient and equitable distribution, the Deputy Fuel Administrator may divide the area into zones and allocate specific zones to dealers. In addition, no sawdust burners are to be installed after October 1, 1942 (F36, September 12 and F40, September 14). A prohibition was also placed on certain methods of disposal of Douglas fir millwaste which is usable as domestic wood fuel (F34, September 5).

Consumer Rationing Controls

During September the Board arranged for the establishment of some 500 local ration boards throughout the country, to be composed of local citizens. This extension of the consumer rationing organization is intended to provide more flexible control by bringing local knowledge to bear on local problems. Among the functions which will be allotted to the new boards are replacement of lost ration books, temporary ration cards, and issuance of extra rations for special occasions.

Meat.—A voluntary rationing by consumers of the amount of bacon, fresh pork and ham bought, up to November 1, was urged by the Foods Administration of the Board in order that weekly shipments of bacon to Britain might be maintained. The possibility of rationing beef arose during the month, and plans for rationing are being studied in case the shortages should prove to be more than temporary.

The rationing system for sugar, tea and coffee, with respect to household use has been little changed. Use of the permanent ration books began on September 7. A minor change allowed coupons to become valid in pairs, thus enabling a month's supply to be purchased at one time. Members of the armed forces on leave or on subsistence, and visitors to Canada are to be issued with temporary (ten week) ration cards. The use of purchase vouchers was discontinued on September 30, and sugar bought for preserving before that date is to be used before October 31. (Board Order No. 176, August 25).

Sugar.—Several changes were made in the rationing system with respect to users of sugar other than household consumers. Those

who had formerly signed purchase vouchers in obtaining sugar—public caterers, institutions, industrial users, etc.,—are now to fill out requisition forms and the amount of sugar they can obtain in the next three months (October to December) is limited to the quota set for them by the Supervisor of Rationing. This method, more flexible than the flat 30 per cent cut, is designed to allow for increasing or decreasing volume of business. Commercial fishermen, formerly in the institutional category and tied to one supplier, are now to be issued with temporary ration cards which they may use in addition to their permanent ones.

Tea and Coffee.—Similar changes have been made in the documentary procedure and the quota system applying to tea and coffee. Public caterers, institutions and industrial users are required to register through a supplier with the Board, but they may have a separate supplier for tea and for coffee. In relation to the rationing of tea, a bulletin issued by the tea director translated the retail price per pound set by an order in January last into appropriate prices for small packages; and an order, effective October 1, prescribes the packaging of tea only in sizes containing an even two, four, eight or sixteen ounces, or a multiple of sixteen ounces (A403, September 21).

Price Adjustments

Fish.—Several price adjustments were effected during the month with a view to encouraging additional supplies of certain products, mainly foods. New ceiling prices were set for *canned pilchards,* increasing processors' prices by 50 cents per case of 48 one-pound tall tins (A381, September 8). To encourage the supply of *tuna fish,* formerly chiefly imported from Japan, specific maximum prices were set for processors in the Maritimes and Quebec (A380, September 8). Both price adjustments provided that wholesalers and retailers may add to their laid-down costs their normal mark-up of the base period, but this is not to exceed 10 per cent of selling price for wholesalers and 25 per cent for retailers.

In order to secure the processing of new varieties of fish on the Pacific Coast, to replace canned salmon and canned herring, (the entire pack of which has been earmarked for Great Britain), new ceiling prices were set for *frozen salmon, fresh and frozen soles, brills and witches.* Wholesalers' and retailers' prices are to be determined on the basis of laid-down costs plus normal markup, the markup again being limited to a fixed maximum percentage (A382, September 8).

Honey.—With the objective of maintaining uniformity of honey supplies in all sections of the Dominion, maximum wholesale and retail prices have been adjusted for *extracted honey and pasteurized granulated honey.* Prices were fixed on the basis of prices paid (to producers or wholesalers), including transportation charges, plus the markup used in the base period. Ceilings were placed on these mark-ups, and, in addition, specific maximum prices have been stipulated for wholesalers. Maximum prices on the sale of extracted honey by primary producers to consumers are to be the sum of the maximum wholesale price specified in the order plus an amount not greater than 25 per cent of such wholesale price. (Board Order No. 182, September 8).

Nuts.—An order concerning *brazil nuts* laid down a formula for determining maximum importers' prices based on landed seaboard costs for various grades and kinds. Upper limits were placed on the landed costs which may be used in calculating maximum prices. From this scale, wholesalers' and retailers' maximum prices are to be computed by adding transportation costs and normal markup, subject to a maximum percentage, in each case. Upper limits were placed in each case on the markup which may be used. (A404, September 21.)

Cheese.—An order respecting *processed cheese* allowed an adjustment of dealers' prices which had not reflected increased processors' prices. Wholesalers and retailers were permitted to add their normal markup of the base period to the actual price paid, with the provision that the markups were not to exceed 10 per cent and 25 per cent of selling price for wholesalers and retailers respectively. (A372, September 2.)

Beef.—The normal seasonal decline in prices of *beef cuts,* contemplated by Board Order No. 149, June 24, was carried out in an administrator's order for the period September 14-November 30. (A393, September 11). Reductions, up to September 30, total 3½ cents per pound since the seasonal schedule order became effective on June 25. A minor amendment to Board Order No. 149 changed the maximum prices chargeable in Zones 5, 6 and 10 for carcasses or sides. (Board Order No. 188, September 11).

Fuelwood.—Specific maximum prices for *fuelwood* were set in one Ontario district (F35, September 8), and several minor extensions and amendments were made in orders applying to certain Quebec districts (F37, F38 and F39, September 14). Maximum prices (delivered) were specified for sawdust and millwood sold in Vancouver, Outer Vancouver and Victoria areas. (F36, September 12, and F40, September 14).

Lumber.—To ensure supplies, increases were allowed in maximum manufacturers' and wholesale dealers' prices for *lumber, shingles and laths* produced in the mountain and interior regions of British Columbia over the maximum prices established in a previous order, A158. Maximum prices for retail dealers were not increased, remaining at the levels established on or before September 13, 1942. The provisions of the new order now cover sales in British Columbia and the Prairie Provinces (A412, September 14).

Exemptions.—There were no further exemptions to the price ceiling during the month, but all former orders permitting exemptions from the price ceiling were consolidated in Board Order 189, (September 22, effective October 1.) The order lists the original exemptions contained in the Order in Council of November 1 last, and those approved afterwards. Since January exemptions have been few in number and of rather minor significance.

Prices of Used Goods

Maximum prices were fixed for several used goods made wholly or partly of metal. These orders in effect clarify the price provisions of the Maximum Prices Regulations in so far as these goods are concerned. Maximum prices for *used industrial and used domestic sewing machines* are not to exceed 75 per cent and 60 per cent respectively of the selling price when new. This applies only to Ontario and Quebec, specific variations being allowed on sales to allow for freight differentials in the other provinces. (A391 and A392, September 11). With respect to *used typewriters,* specific maximum amounts for different makes and models and in different conditions—rebuilt, reconditioned and otherwise—were fixed. Maximum rentals and maximum charges for alterations, for inspection and service were also set (A394, September 11). *Used electric stoves,* in good condition and guaranteed for 30 days are subject to a maximum of 60 per cent of the price for a similar new stove or the base period price for a similar used stove, whichever is the lower (A396, September 11).

"Squeeze" Adjustments

Several "squeeze" adjustments were arranged during the month. Manufacturers of *fall weight work shirts* were allowed to increase their prices by 12 per cent over the period January-February, 1941. Since manufacturers' costs are estimated to have increased by 15 to 17 per cent, part of the "squeeze" will be absorbed at each level. The order also specified that a manufacturer must make articles in the same price ranges and with the same proportions in each as in the 1941 period (A399, September 10). Manufacturers of *pianos and organs* have been allowed to increase their prices by 5 per cent over the base period with no increase in retail price (A377, September 4). Price increases of specific amounts were permitted manufacturers of *brick and hollow structural or terra cotta tile* in Ontario; dealers' prices could be increased only by the resulting increase in their costs (A410, September 28).

Canned Fruits and Vegetables.—A new order has been made adjusting the price regulations with regard to *canned fruits and vegetables* of the 1942 pack (Board Order No. 186, September 8, amending Board Order No. 148, June 24, 1942). Formerly, the major items of the pack (Schedule "A"—canned tomatoes, tomato juice, peas, corn, beans, peaches, pears, plums and apricots) were subject to individual retailer's ceilings established in the base period. Under the previous adjustment (Board Order No. 148) specific maximum prices were set for canners, but the margin left for dealers proved so narrow that some lines could not be handled and an artificial scarcity developed. The new order is designed to overcome these difficulties and will result in a more uniform ceiling throughout the country. Wholesalers' and retailers' prices for these items are now to be determined by their laid-down cost plus a percentage markup which is not to exceed 10 per cent and 20 per cent of selling price respectively. This corresponds to the method of determining dealers' prices for items in Schedule "C" (23 other varieties), which was adopted in the previous order.

Other Developments

Moving Picture Films.—Because of special technical conditions and to ensure rigid adherence to the Regulations, an order respecting the rental and exhibition of moving picture films defined in general terms the policy which the Services Administration has been following in the motion picture field. One important feature of the order provided that the run categories of theatres are to be maintained as they existed during the basic period. Distributors are required to submit groupings of their products to the Administrator for approval before commencing to sell and before rental contracts will be valid; exhibitors are not to change the numbers or location of seats in any price range; and a premium policy cannot be commenced now if the theatre did not give premiums during the basic period or during August, 1942 (A398, September 16).

Rents.—A rentals order strengthened the position of the Rentals Administrator by giving him definite powers to appoint Rental Committees and by more clearly defining his powers with respect to the fixing and variation of maximum rentals and termination of

leases. It is possible for him to fix maximum rentals for accommodation according to the number of persons or otherwise, or to prescribe the manner in which any maximum rental shall be fixed. (Board Order No. 183, September 8).

September 1 Cost of Living Index

A further decline of three-tenths of one point occurred in the cost-of-living index during August, with the September 1 index standing at 117·4 (August, 1935=100). Since November 1, 1941, one month before the price ceiling came into effect, the index has increased only 0·9 per cent. The food index, which declined 1·1 per cent between August 1 and September 1, was the only one to register a change. Lower prices for potatoes, beef, lamb and onions more than offset increases for eggs, milk, butter, oranges and bananas.

ANNUAL CONVENTION OF CANADIAN CONGRESS OF LABOUR

Summary of Proceedings—Featuring an Address by Philip Murray, President of the Congress of Industrial Organizations

THE third regular convention of the Canadian Congress of Labour was held in Ottawa, September 14-18, 1942. There were 420 delegates in attendance from 55 Congress units, representing all of the basic industries, as well as many of the other industries in Canada.

The Mayor of Ottawa, Mr. Stanley Lewis welcomed the delegates to the Capital City and in the course of his remarks referred to the heroic effort being made by the United Nations to preserve "our way of life". In order that this united effort be not wasted, he urged the delegates to be prepared to improve "our way of life" when peace comes.

Address of Minister of Labour

In opening his address the Minister of Labour, the Honourable Humphey Mitchell, drew attention to the mighty conflict which had been raging for over three years with no prospect of an early termination. "Our enemies", he said, "are still on the offensive, but one of these days the tide will surge the other way and the forces of the United Nations will be sweeping forward to victory. Our enemies are strong. Let us not deceive ourselves. They have shown no lack of manpower or equipment. They know it is an all-out war for them as it is an all-out war for us". Credit was given to labour by the Minister for the part it was playing both in enlistments in the fighting forces and on the home-front in the production of weapons.

He asked the delegates to give their full co-operation to the Minister of Finance, who had a difficult job to do in raising money through taxation and loans to finance the war.

Mr. Mitchell referred to the criticism of the Government's Wage Policy and asked the delegates to be just in their consideration of this policy. "It is a benefit to the worker", he said, "and linked with the prices stabilization policy it is a control over the cost of living. Without this control you would have inflation with higher and higher prices for goods and chaotic wage conditions". The Minister declared that the twin policies were designed to protect the common people against the ill effects of inflation.

He denied that the Government's Wage Policy was to "freeze" wages, stating that the national and regional war labour boards have the power to adjust wage rates. "It is our aim", he said, "to remove anomalies, to eradicate injustices. These are the points you must keep uppermost in your minds:

"(1) Without control of prices and stabilization of wages there would be a condition of panic to-day. The spread between prices and wages would mean much suffering and a lowering of public morale.

"(2) Stabilization of wages does not mean that the worker is not to be justly paid for his toil. Wages to-day are better than the average of the so-called prosperous years of 1926 to 1929.

"(3) Uncontrolled prices would add enormously to the cost of the war which the people must pay.

"(4) There cannot be fixed prices if there are constantly rising wages".

In referring to the numerous small strikes which have occurred in Canada since the beginning of the war, Mr. Mitchell said "There have been too many small strikes in our country, stoppages of work for a few days. There is no justification for letting down the men who fight for us or who brave the hazard of the merchant marine. I do not care what arguments are advanced. There is no complaint big enough to warrant ceasing one day in making the munitions required by those who are fighting for us. We cannot have industrial strife or inter-union strife and make the contribution the Canadian people expect of us at this critical time". He

appealed to the delegates to fight the serious problem of absenteeism.

Mr. Mitchell expressed the hope that there would be increasing co-operation between employers and employees organizations in the advancement of policies having to do with the successful prosecution of the war.

Address of President Mosher

In opening his address the president of the Congress, Mr. A. R. Mosher, referred to the titanic conflict in which the Allied Nations were engaged and expressed the hope, that at the beginning of the third year of war, the tide has turned in our favour. "At such a time as this," he said, "the need for national unity, for loyalty to the principles of democracy and freedom, for unstinted devotion to the common cause and for the utmost contribution which every individual and group can make to the winning of the war, transcends every other consideration. At this convention, one of our chief purposes must be once again to pledge ourselves and the organized workers whom we represent to the fullest co-operation in an all-out war effort, and to increase our capacity to make it more and more effective".

The delegates were advised that "no sacrifice was too great, no self-restraint too hard to impose, no task too onerous, to ensure the triumph of our armed forces, and that must be the keynote of the deliberations at this convention".

Dealing with the subject of "right of association", President Mosher stated that "the chief defect in the Government's labour policy in the past had been its failure to protect the right of workers to organize freely and bargain collectively with their employers through representatives of their choice." This attitude, he said, has caused bitterness and resentment among the workers and they look to the Government for redress, knowing that the right to organize has been won in Great Britain and is now taken for granted and that in the United States this right is protected by the National Labor Relations Act.

The president claimed that there was an additional source of criticism "in the fact that the Government and employers have so far failed to co-operate with organized workers in the calling of national conferences in the basic industries and the formation of industrial councils and joint labour-management production committees".

Mr. Mosher repeated a statement he made at the last convention in Hamilton "that the workers should realize the necessity of avoiding industrial strife, particularly in those industries which were essential to the successful prosecution of the war." He asserted: "My convictions in this respect have not changed during the past year, except that, if possible, they have become stronger."

He said that the war would be long and difficult and that it would take all that we have and are to win through to victory. "As workers and Canadian citizens, we must not think of our immediate interests and lay undue emphasis upon our rights, however important, if our fight for them involves the slightest slackening of our efforts to produce war materials. The first consideration is the winning of the war. We must not endanger the war effort, no matter how great the provocation may be to do so, by strike or slowdowns in war industry. Not a single day's production of war materials should be lost through any action on the part of the workers, for that means a loss, not to the employer or the Government alone, but to the nation and to the Allied cause."

He expressed his conviction that only through organization could the workers assist in the war effort to the fullest extent. Mr. Mosher maintained that in extending the membership of its affiliated and chartered unions, and in organizing the unorganized workers of Canada, the Canadian Congress of Labour was not carrying on activities which were opposed to the public interest, but was serving the public interest and contributing to the war effort.

President Mosher expressed the opinion that the labour movement could also make a great contribution toward the solution of post-war reconstruction problems, if it were given an opportunity to share in the determination of the policies and the carrying out of plans adopted. He was convinced that "the workers of Canada who are organized in unions affiliated with the Canadian Congress of Labour are eager and willing to do everything in their power to strengthen the hands of the fighting forces, setting aside every other consideration, if necessary, until the war is won. Then," he continued, "we shall work wholeheartedly with all other groups of citizens in every country to rebuild a shattered world, along new lines of justice and brotherhood, a world of peace and joy and freedom, a world in which the hopes of all the ages will find their fulfilment and their fruition."

Executive Council Report

The report of the Executive Council reviewed its activities during the past year. Some of the subjects of special interest dealt with were: the wages and price control legislation; the Kirkland Lake strike; the National and Regional War Labour Boards; the Congress memorandum presented to the Government; co-operation with other labour bodies;

and Industrial Councils. A detailed statement on the Congress' organizational activities was also presented. Mention was made in the report of the resignation of Mr. M. M. Maclean as a member of the executive committee and his appointment to the position of Director of Industrial Relations in the Department of Labour.

Financial Statement

The financial statement covering the fiscal year, August 1, 1941, to July 31, 1942, was presented by the secretary-treasurer Mr. P. Conroy, and showed total receipts, amounting to $97,086.75, with expenditures of $65,400 leaving a balance of $36,484.44.

Convention Addresses

Hon. Peter Heenan, Minister of Labour for Ontario, expressed his pleasure at the opportunity of addressing the convention. He thanked the workers of Ontario for keeping down the number of strikes, which only amounted to a few days per month. It was the Minister's opinion that the chief cause of disputes concerns collective bargaining. He thought that employers would be glad to deal collectively with their employees thus securing their assistance and co-operation.

The Minister made reference to a recent meeting of members of the Ontario Cabinet and representatives of the Canadian Congress of Labour. He stated that "following the representation of the Congress' Officers the Cabinet agreed to bring down legislation to force employers to bargain collectively with their employees."

Mr. Elliott M. Little, Director of National Selective Service, told the delegates that Canada was facing an acute man-power shortage and this was deterring war production. The latest figures on Canada's man-power needs, indicated that almost 200,000 men and women would be required in industry by the end of the year. An additional 100,000 men would be required for seasonal logging needs. Mr. Little said: "We must review the way in which we are using our man-power, even in the most essential industries and re-allocate our man-power so that it will be used more efficiently." Working as a team, management and labour will meet the demands, he stated, adding that most unions are co-operating to the full. He contended that "our civilian standard of living should be kept to the bare minimum necessary to maintain health and efficiency." Unions would have to reconcile themselves to large-scale employment of women, not only in industry but also in services previously considered suitable only for the employment of men. "We are past the stage where we only need in industry women who are working because they need the money," he said. "From now on, as our armed forces expand and our munition production grows accordingly, women who never had to work because of economic necessity should come forward and offer their services to industry in their own and the nation's interest. Not only will we need the single young women but also married women with the exception only of those with considerable family responsibilities." The induction of women into industry would be accelerated but assurance was given that the employment of women would not undermine wage agreements.

In reviewing recent man-power legislation, Mr. Little stated that "the regulations do not freeze labour and were not intended to interfere with the operation of any existing collective bargaining agreement." Plans for new man-power boards, which would be required in the transfer of military draft administration to selective service, were not yet complete he said, but it was possible that they would include representatives of Labour. The Director made a strong plea for improved relationships, not only between labour and management, but also within the ranks of labour.

After his address, Mr. Little gave the delegates an opportunity to ask questions.

Address of Mr. Philip Murray

An outstanding event of the convention was the address of Mr. Philip Murray, President of the Congress of Industrial Organizations and President of the United Steel Workers of America.

After extending greeting on behalf of the members of the Congress of Industrial Organizations, President Murray said "I bring to you from them a word of cheer and goodwill and an expression of a very wholesome desire to co-operate with the Canadian Congress of Labour and all those engaged in this great struggle."

The people of the United States, Mr. Murray declared, are obsessed with the performance of an outstanding task, the winning of the war, because underlying that thing which we call the war are the symbols of freedom—the symbols of a democratic way of life, and the symbols of a free labour movement.

Mr. Murray said: "In 1939, when the British Parliament declared war against Germany, I favoured the British point of view on that day because I believed Britain was right and that the Fascist and Nazis were wrong, and when talking to workers, I expressed my

whole-hearted sympathy for the aspirations and laudable objectives of Great Britain and the Commonwealth of Nations. I have constantly maintained that attitude, believing that this can never be a free world until tyranny and all forms of aggression, represented as they are by the Axis governments, are completely driven from the face of the earth."

In the year 1939, he said, plans were being devised by the leaders of the Congress of Industrial Organizations whereby industry and labour could co-operate for the purpose of greater and more efficient production. "These plans were brought to Washington but the politicians thought it a little bit revolutionary and the manufacturers were afraid of it because they said it was dangerous." He pointed out that it was not until after Japan had attacked the United States and President Roosevelt had established the National War Production Board for the purpose of increasing production, that the need for joint co-operation of management and labour was recognized. "At the present time," stated President Murray, "more than 2,000 of these industrial councils are in operation, labour and management working together to bring victory to the United Nations' cause. In almost every agency of the federal government, labour has its representatives, not only for the purpose of policy making but administration. Perhaps that is not sufficiently adequate, but it is more than labour has ever had in the history of the movement in the United States."

Dealing with strikes in wartime Mr. Murray said, "The C.I.O. will not tolerate a strike during the war, particularly a strike over jurisdictional differences." In addition he added that he and the President of the A.F. of L. had agreed with the President of the United States that, for the duration of the war, neither of the two major labour organizations would recognize strikes, providing the Government of the United States would create an agency to peacefully mediate, conciliate, and if need be, arbitrate, differences between employer and labour, for the duration of the war. Complying with the request President Roosevelt issued a directive establishing a National War Labour Board to which all disputes will be referred for the duration of the war.

Referring to the granting of charters to international unions in Canada, Mr. Murray stated that "charters are issued to each of the international unions in Canada, with the clear understanding that each of the international unions so involved exercise their own autonomy. They are free to function in their own way and to dispose of their own business in their own fashion, without interference on the part of the officers of the organization in any other country".

Concluding his address, President Murray urged the delegates to "work together cooperatively and unitedly, as you work to help your unions, to help your families, and above all, to bring speedy and complete victory to your country and to my country, and to all of the countries in the great family of the United Nations".

Address of Mr. Staal

Mr. A. Staal of the International Labour Office gave a very interesting address in which he outlined the history, composition and functions of the International Labor Office. Since the inception of the I.L.O. that organization had developed some seventy conventions and an equal number of recommendations on such subjections as working hours; protection of women workers and young workers; sickness, accident, invalidity, old-age and unemployment insurance; accident prevention; compensation for occupational diseases; labour inspections; holidays with pay: special legislation for seamen, etc. He emphasized that these were only plans and must be implemented by the national parliaments of the various countries. It was the opinion of the speaker that if more of the plans drafted by the I.L.O. were implemented by the Canadian Government they would be of great benefit to the workers. The question of implementing these draft conventions, said Mr. Staal, "certainly deserves the closest attention of the organized workers of Canada if they do not want to remain at a disadvantage as compared with workers of non-federal countries in the post-war period."

Other speakers addressing the convention were Mr. Russell T. Kelley, convenor for Ontario of the Red Cross Blood Donors' Service; Dr. Maxwell MacOdrum, of the National War Finance Committee; Honourable Frank Langstone, High Commissioner for New Zealand; and Mr. Fred. Knowles, National Secretary, Amalgamated Civil Servants of Canada.

Government's Wage Policy

Twelve resolutions were submitted to the convention, with reference to the wage-policy of the Government. The resolutions committee, to which these were referred, brought in the following substitute resolution which after a lengthy debate was adopted.

(1) That adequate minimum wages be paid all workers in industry, to be arrived at through full collective bargaining, and that these be established taking into consideration the impact of taxes, etc.

(2) That the investigational staff of the National and Regional War Labour Boards be increased to eliminate delays in the handling of cases.

(3) That all hearings of the Boards be public and that all findings and decisions shall be a matter of public record.

(4) That applications shall only be submitted to the Boards after an attempt has been made to come to an agreement through the processes of collective bargaining.

(5) "Full and proper" cost-of-living bonus for every worker.

(6) Establishment of industry-wide wage stabilization in each of the key industries, auto, steel, shipyards, etc.

The resolution also endorsed certain sections of the memorandum submitted to the Dominion Government by the Canadian Congress of Labour on February 27, 1942, a summary of which was published in the Labour Gazette for March, 1942, page 291.

Collective Bargaining

There were nineteen resolutions presented dealing with the subject of collective bargaining. The Convention adopted a substitute resolution which read as follows:

(1) That this Convention maintains that industrial democracy is a solution to industrial strife and disharmony.

(2) That this Convention declare itself in favour of Dominion legislation similar to that contained in the National Labor Relations Act of the United States, which gives full protection to workers who by majority vote in a given plant choose a bona fide Labour union as their bargaining agent; and which Act outlaws Company unions and makes collective bargaining and signed contract compulsory on the employer, and which Act further provides for proper administration and appeals in which Labour is given full and equal representation.

(3) That the incoming Executive be instructed to prepare a specimen Act along these lines containing the democratic features of the National Labor Relations Act of the United States and press upon the Government for its immediate enactment.

(4) That this draft Act be immediately distributed to all affiliated unions of this Congress, in order that the most advantageous action be taken to enlist the full support of the public for its implementation.

(5) That this Congress call upon the Government to set an example of genuine industrial democracy for victory in this war within the meaning of P.C. 2685 by immediately guaranteeing collective bargaining and signed union contracts in Government owned and operated plants.

Labour Unity

A substitute resolution on the question of labour unity replaced seven other resolutions submitted to the convention. Adopted unanimously it read as follows:

That the incoming executive be instructed to again approach the Trades and Labour Congress of Canada, and the Confederation of Catholic Workers of Canada with a view to joint action on all issues confronting the Canadian labour movement and to urge the local unions affiliated with the Congress to undertake a campaign of education for all workers in their district on the true objectives of labour organization.

Unemployment Insurance

The following resolution was substituted and adopted for six resolutions submitted to the convention.

That the Canadian Congress of Labour make representation to the Dominion Government to make the Unemployment Insurance Act to include:—

(1) All Government employees.

(2) All workers, regardless of income, who are not now included under the Act.

(3) Provision to be made for sickness and hospitalization.

(4) No discrimination because of strike activities.

(5) Increase the benefits to bring a minimum of amount to cover health and decency.

(6) Increase employer's contribution to meet the additional cost.

(7) Payment to all unemployed people regardless of their contribution. Payment for full period of unemployment.

Post-war Problems

The convention adopted the following resolution as a substitute for a number received on the subject of post-war problems:—

That the governments of the United Nations should recognize:

(1) The absolute need of utilizing the brains and energy of all the people in the struggle to achieve victory in war.

(2) The need of formulating to-day policies and plans which will assure the people of the world the four freedoms—freedom of speech and assembly, freedom of religious worship, freedom from fear and freedom from want.

(3) The need of being fully prepared so that after the United Nations have achieved victory in war the same energy and resources of men and machinery which are now creating maximum production for war may be turned toward maximum production to achieve full employment and decent standards of living for all the people of the world.

Other Resolutions

The recommendations contained in other resolutions adopted were:

Public ownership and control of financial institutions.

Exemption of cost-of-living bonus from income tax.

Cost-of-living bonus for soldiers' dependents.

Two weeks holidays with pay.

Free transportation for members of armed forces.

No discrimination against race, colour and creed.

Protective legislation for persons compelled to purchase homes because of the housing shortage.

Extensions of wage control legislation to employees of the government and public utilities.

Immediate enactment of a full active selective service for the armed forces and the reserve.

Amendment of income tax provisions exempting salaries of single persons up to $750 and married persons to $1,250, with $400 exemption for each child.

Allowance of mortgage payments on new purchases of houses as an income tax exemption comparable to life insurance policies.

That the Amalgamated Civil Servants be invited to affiliate with the Canadian Congress of Labour.

Expressing opposition to interference with the present regulations covering the manufacture and sale of alcoholic beverages.

Implementation of the recommendations of the House of Commons Committee on the Defence of Canada Regulations, lifting the ban on the Communist Party and other organizations and the release of interned persons known to be anti-Fascist.

That authority be granted the Director of National Selective Service, to direct the most efficient use of manpower, including training and allocation.

That proper machinery be established for the compilation of the statistics for the payment of cost-of-living bonuses on a regional or district basis.

Creation of a national wage policy in the shipbuilding industry in Canada.

Appointment of a permanent Government conciliator for the automobile industry.

That a joint management conference of all Canadian automobile companies be held under the chairmanship of J. H. Berry, director-general of war vehicle production to discuss ways and means of achieving total war production.

Requesting the Government to make Orders-in-Council P.C. 8253 and P.C. 1549 applicable to all citizens.

That some form of National Health Insurance be put into effect immediately.

That the qualifying age under the Old Age Pension Act be reduced to 60 years, and the pension increased to $60 per month.

Favouring the payment of cost-of-living bonus to widows and old age pensioners.

Equal pay for equal work.

That a "Second Front" be opened in Europe.

Increased pay for members of the armed forces with protection under the unemployment insurance plan.

Expressing appreciation to the C.C.F. members in the House of Commons for the assistance given to labour and advising affiliated unions to study the C.C.F. program.

Election of Officers

The officers elected for the ensuing year were:

President, A. R. Mosher (Canadian Brotherhood of Railway Employees and Other Transport Workers), Ottawa; vice-presidents, Alex McAuslane (Vancouver Metal Workers' Union), Vancouver, and Sol. Spivak (Amalgamated Clothing Workers of America), Toronto; secretary-treasurer, P. Conroy (United Mine Workers of America), 230 Laurier Ave. W., Ottawa; executive secretary and editor of the *Canadian Unionist*, N. S. Dowd (Canadian Brotherhood of Railway Employees and Other Transport Workers), Ottawa.

Executive Board Members; J. E. McGuire (Canadian Brotherhood of Railway Employees and Other Transport Workers), Ottawa; T. Prezeau (National Union of Operating Engineers of Canada), Montreal; F. Millard (United Steelworkers of America), Toronto; T. T. Johnson (United Automobile Workers of America), Windsor; Silby Barrett (United Mine Workers of America), Glace Bay.

Montreal was selected as the convention city for 1943.

CONVENTION OF THE AMERICAN FEDERATION OF LABOR

President William Green Pledges that Production Quotas Will Be Exceeded

THE American Federation of Labor held its sixty-second annual Convention in Toronto, Ontario, October 5-14, 1942. The 501 credentials received represented 87 international and national organizations, 4 departments, 34 state branches, 95 central bodies, 58 local trade and federal labour unions and 3 fraternal delegates, 2 from the British Trades Union Congress and 1 from the Trades and Labour Congress of Canada.

After the invocation by His Grace, the Most Reverend J. C. McGuigan, D.D., Chairman William Jenoves greeted the delegates on behalf of the Toronto and District Trades and Labour Council and Mayor F. J. Conboy extended a civic welcome.

Premier Hepburn, in welcoming the delegates to Ontario, informed them that the Hon. Peter Heenan, Minister of Labour, had recommended that official legislative recognition be given to the right of collective bargaining in Ontario, and added that, at the earliest date possible a measure for that purpose would be introduced in the Legislature. Referring to

the causes which he alleged had rendered the League of Nations impotent, Mr. Hepburn said "I believe that the future peace of this world is only secure in the hands of labour and the great masses of an organized society."

Welcome of Minister of Labour

In opening his address, the Minister of Labour, Hon. Humphrey Mitchell stated "I think the labour movement of the North American continent has made the greatest contribution to peace of any group of individuals in the world. If it were possible that the great German trade union movement could meet as you are meeting to-day I do not think the war would have happened."

The Minister commended the action taken in the United States to adopt price stabilization and urged the delegates to give co-operation in the carrying out of this new policy.

The delegates applauded his prediction that "when the history of our time is written, your great President Franklin Roosevelt, will be remembered as one of the greatest human beings who ever lived."

President Green's Address

In replying to the addresses of welcome, President Green stated that the delegates present represented six million loyal and devoted workers of the United States and Canada, and emphasized "we are privileged to meet as free men and women in a free country and to exercise in a convention of this kind the right to shape our own policies and to administer the affairs of our own free democratic unions in a free land."

In referring to the war, President Green declared that "the great issues involved in the World War transcend and overshadow every other question that could be presented or considered at this convention."

Answering President Roosevelt's appeal for the achievement of production objectives, Mr. Green asserted: "Speaking for six million working men and women, I declare here that the President of the United States need not hope. I assure him, that before the end of this year all the standards he set will be excelled by the workers of America."

Labour Unity

In reporting on the progress being made in bringing about unity in the ranks of labour in the United States, Mr. Green stated:

"I can report to those in attendance at this convention that it is expected that a committee representing the American Federation of Labor and a committee representing those who left us will sit around the conference table in a friendly atmosphere, within the near future, for the purpose of trying to find a basis of accommodation and settlement of our differences. We will do everything that lies within our power to make it a full and complete success. I will give all I can in order to promote the realization of that purpose and if I could reach that objective and realize it within the life of my official service to you, I would feel then that I had practically completed my work as your representative."

President Green declared that "labour must be represented by a large membership" at the peace conference at the end of the war and that a large international force, democratically controlled, should be established to maintain peace.

Report of Executive Council

The report of the Executive Council drew attention to the fact that labour fully appreciates the dangers which confront the United States of America, and the responsibilities which devolve upon the wage earners of America as citizens and as producers of materials necessary to the war effort.

The total paid-up membership of the Federation was 5,482,581, an increase over 1941, the peak year up to that time, of 913,525, comprised of 102 national and international unions and 1,517 directly affiliated local trade and federal labour unions. In addition the Federation had under charter 4 departments, 49 state federations of labour and 780 city central bodies.

Message from President Roosevelt

The following message from President Roosevelt was read:

"Your invitation to attend the annual convention of the American Federation of Labor is always a welcome one, but because of pressing duties here I must deny myself the privilege of being with you.

"Will you, however, express to the officers, delegates and members of the American Federation of Labor assembled at this, its sixty-second annual convention, my cordial appreciation of all they have done to further the war effort? Our production record speaks for itself and for the working people; it is splendid. Everywhere during my recent inspection of war activities, I found the workers doing all that was laid out for them and more. At every turn they gave assurance that they can take whatever it takes to win the war. They are not afraid of hard, continuous, precise and dangerous work. They are walking up to it as their duty and part in the war. They are proud of it.

"The various groups which comprise the Federation will, I hope, make available at this

time their most statesmanlike leadership. Officers and delegates of the trade union movement, consecrated to preserve the freedom of humanity, can serve to-day the whole people of this country, as well as the loyal membership.

"With best wishes for a convention whose words and actions will contribute to that unity of purpose so essential in this hour when civilization itself is at stake and with warm congratulations."

Address of Miss Frances Perkins, United States Secretary of Labour

Miss Frances Perkins, Secretary of Labor of the United States, after visiting several Canadian munition plants, said "It is inspiring to us of the United States, who are just beginning the use of women in our war industries, to see the intelligence, the skill and devotion to duty shown by women in the munition plants here. In these plants I saw just what I wanted to see—round-the-clock production. It was a great inspiration and a great education, and I am grateful for the privilege extended to me through the Canadian government to visit these two great enterprises where munitions of war were being made.

"I was particularly interested in the number of women employed and I asked the managements how effective they had found women employees. I was told that the management's only problem was to make the women comfortable to do their work, that if they were made comfortable they were highly efficient."

In speaking of the National War Labor Board of the United States which was established in the spring of 1942, with equal representation of management and labour to hear and settle wage disputes, Miss Perkins said, "Let us not scrap the War Labor Board process when peace comes. If we retain and develop the machinery conscientiously, we shall build up gradually an all but universal reliance on the process of adjustment rather than on the strike or lockout as a method of settlement of differences about wages, hours and working conditions, about unions' rights and obligations, individual rights and obligations, and employers' rights and obligations."

Ontario Minister of Labour

In a short address before the delegates to the A.F. of L. Convention, the Minister of Labour for Ontario, Hon. Peter Heenan invited members of the Federation to visit his office and examine the draft bill on "collective bargaining" which he had prepared and would introduce at the next session of the Legislature.

The Minister quoted figures to show how few days were lost through strikes in Ontario during the present year, and he added, "Most of these days lost due to strikes this year were due to fights for union recognition or fights for collective bargaining. . . . So far as my power will permit, there will be no more fighting for the right of collective bargaining in Ontario."

U.S. Under-Secretary for War

A warning was sounded by the U.S. Under-Secretary for War, the Hon. Robert P. Patterson, that organized labour must accept suspensions of many peace time standards as to hours and working conditions. "To equip an army of the size we have and contemplate, and at the same time to furnish our allies with equipment, is the biggest production job we have ever tackled. It will require that there be no deviations from the pledges given by leaders of labour that there will be no strikes or stoppages of work on war production."

Addresses of Fraternal Delegates

As one of the fraternal delegates from the British Trades Union Congress, Mr. Jack Tanner, president of the Amalgamated Engineering Union of Great Britain with a membership of 665,000, described at some length, conditions under which the people of the British Isles are working. He emphasized that the manufacture of non-essential goods had practically ceased. Referring to three different enquiries into conditions of production by his union, he indicated how each succeeding enquiry had shown a marked improvement, some of which was attributed to better co-operation between employees and management. "Another factor in this situation," he said, "was the tremendous improvement in the efficiency of the new entrants into industry."

Mention was made of the establishment of an Anglo-Russian Council of Labour and the exchange of visits by both parties with a view of acquainting themselves with the methods of war production in each country. The speaker urged that the greatest efforts be made to link the workers of Britain, Russia and the United States, claiming that "such allied labour unity is necessary, not only to achieve maximum war production in our respective countries, but also because international unity will permit the workers in each country to gain prestige and be in a position to play a greater role in the councils of war and in the national organization of the war industries, and in making the peace."

Mr. Bryn Roberts, the second representative from the British Trades Union Congress,

enumerated the established rights of organized labour that were voluntarily given up in order that production might be speeded up. In referring to the measure of unity that had been established between the labour movement and the government, the representative of the B.T.U.C. stated, "We have not given up our right to criticize, to oppose and to condemn if we think circumstances justify it."

The delegates were informed that in all workshops employing more than 150 persons, joint works production committees are being established, upon which the trade unions and managements will be represented, for the purpose of further increasing the production of the instruments of war.

In his address Mr. Donovan Swailes, fraternal delegate from the Trades and Labour Congress of Canada, gave a very complete picture of Canada's war effort, which he said, "has been made possible by the use of human energy which was unemployed before the war." The fraternal delegate expressed the opinion that "prices cannot be completely controlled," while on the other hand "effective control over wages is a fairly easy matter," with "the inevitable result of lower real wages and a reduced standard of living for those who depend upon wages for a livelihood."

Prime Minister's Address

In addressing the delegates, the Right Hon. W. L. Mackenzie King told them that Hitler had gained success through fear. With one class he used the fear of communism; with another, the fear of unemployment and want; still others were brought into subjection by fear of violence to themselves or their families. "Once in power in Germany," he said, "the Nazis used fear to gain their ends in other countries, the fear of other classes and other races, the fear of social change, the fear of revolution, the fear of war; the war of nerves in reality is simply the exploiting of fear, and in the conquered countries, the use of fear has become a reign of terror. . . . There is only one way to destroy fear," stated the Prime Minister, "it is to destroy the powers which are striving to dominate and enslave all peoples on all continents." Mention was made of many other forms of fear which must be eliminated before the war for freedom is won. (Further remarks of the Prime Minister are quoted on page 1113 of this issue.)

Other Speakers

Other speakers to address the convention were: Mr. Edward J. Phelan, Acting Director, International Labour Organization; Mr. Archibald McDonald Gordon, Labour Attaché, British Embassy, Washington; Mr. L. Metcalfe Walling, Administrator of the Wage and Hour Public Contracts Division, U.S. Department of Labor; Mr. Spencer Miller, Jr., Director of the Workers Education Bureau of America; Mr. John M. Fewkes, President, American Federation of Teachers; Mr. Harold Butler, Former Director, International Labor Organization; Mr. Russell Kelly, Chairman, Canadian Red Cross Blood Donor Committee; Mr. Arthur J. Altmeyer, Chairman, Social Security Board of the United States; Mr. Roane Waring, National Commander, The American Legion; Mr. Wendell Lund, Director, Labor Production Division, War Production Board; Rear Admiral Clark H. Woodward, Chief, Incentive Division, United States Navy; Mr. Joseph A. Padway, General Council, American Federation of Labor; Hon. James J. Davis, United States Senator, Pennsylvania; Mr. J. F. M. Stewart, Chairman, Payroll Section, National War Finance Committee of Canada; Mr. Lessing Rosenwald, War Production Board, Conservation Division.

Committee Reports

The Convention received and adopted a number of recommendations from its various committees. The Legislation Committee dealt with legislation coming before the seventy-seventh Congress of the United States. This committee suggested time and one-half rate of pay for overtime of all government employees and endorsed the legislative program of the American Federation of Government Employees.

The Committee on International Labour Relations asked for the fullest co-operation with the International Federation of Trade Unions and requested that every effort be made to secure adequate financial support for the International Labour office to enable it to carry on and extend its program. The Committee commended the creation of the Anglo-American Trade Union Committee.

The Education Committee urged that notwithstanding the present crisis schools should be kept in full operation and that every teacher should receive a salary of not less than $1,500 per annum.

The Committee on a Shorter Work Day drew attention to the study made by Princeton University on the question of hours of work in which the 8-hour day and 48-hour week was considered to be the most satisfactory for optimum war production. Other important points brought out by the study were: (1) Optimum work hours are likely to be shorter for women than for men. (2) Workers need one day of rest in seven. (3) Absenteeism becomes progressively worse with longer hours. (4) Accidents increase when

excessive overtime is worked. An increase in hours should be accompanied by improvement of accident prevention plans. (5) Adequate lunch and rest periods are important in maintaining a high level of efficiency, even on the 8-hour day. A lunch period of less than 30 minutes is not generally satisfactory. (6) Although excessive hours may be required of some employees for an emergency period, it is imperative for American industry to hire and train additional workers as quickly as possible to permit reduction of weekly hours to a level of maximum efficiency.

In connection with the subject of manpower, the Committee on Resolutions stated that:

"Workers who are asked to give up rights inseparable from personal freedom must be assured in return adequate representation of their own choosing and a degree of social security that will make up for loss of right to make personal decisions.

"Cost of travel to carry out employment orders and of moving families to new homes should be borne either by the employer, the government, or by both jointly."

Among other proposed safeguards were the maintenance of equities in social insurance and the unimpairment of the right to union membership.

The Committee on Resolutions considered that "the National Labor Relations Act, despite improvements resulting from legislative and other efforts of the Federation, continues to present important deficiencies and serious problems," and expressed the opinion that "unless the constructive amendments of the A.F. of L. which place reasonable limits on the extent of that power, are adopted by Congress, then we shall be confronted with a dangerous challenge to the principle of trade union autonomy and voluntarism."

The Resolutions Committee claimed that it was justified in calling attention to the fact that "the outstanding material contribution to the present war effort has been made by management and labour through its co-operative relationship; in fact the contribution of management and labour to war production so outstripped the most optimistic estimates of Federal agencies that they have actually, in some instances, outstripped the immediate capacity of the country to supply them with necessary raw material."

Other Resolutions

Recommendations contained in some of the resolutions adopted were as follows:

Establishment of the National War Labor Board as the authority on all wage policies and issues arising out of the Anti-Inflation Act.

Centralization of authority over contracts in one agency.

Limiting the relaxation of labour standards to the war emergency.

Providing of necessary safeguards for the use of prison labour in war production.

Appointment by the President of the United States of a military and civilian strategy board.

Distribution of labour publications to the armed forces.

Establishment of a post-war problems committee.

Opposition to federal taxes on state and local government securities.

Urging the executive council of the American Federation of Labor to free the organization of internal strife.

Maintenance of standards pertaining to child labour in the present crisis.

Direct labour representation on all state agencies set up to control, plan or direct the national economy.

Recognition of war service of merchant seamen on a parity with that given to persons in the armed forces.

Pledging the united strength of the A.F. of L. to President Franklin D. Roosevelt and the armed forces to achieve final victory.

Election of Officers

The officers elected were: President, William Green, Washington; first vice-president, William L. Hutcheson, Indianapolis; second vice-president, Matthew Woll, Washington; third vice-president, Joseph N. Weber, New York; fourth vice-president, G. M. Bugniazet, Washington; fifth vice-president, George M. Harrison, Cincinnati; sixth vice-president, Daniel J. Tobin, Indianapolis; seventh vice-president, Harry C. Bates, Washington; eighth vice-president, Edward J. Gainor, Washington; ninth vice-president, W. D. Mahon, Detroit; tenth vice-president, Felix H. Knight, Kansas City; eleventh vice-president, Edward Flore, Buffalo; twelfth vice-president, Harvey W. Brown, Washington; thirteenth vice-president, William C. Birthright, Indianapolis; Secretary-Treasurer, George Meany, Washington.

Boston, Mass., was selected as the convention city for 1943.

Employment of Women in Canadian Fisheries

Almost 45 per cent of the workers employed in Canadian fish canneries and other fish processing plants last year were women, according to a Department of Fisheries publication. It is expected that the percentage will go still higher this year.

So far none of the women have gone to sea as fishermen but even that may come the report states, and in one or two instances at least the male cooks on fishing craft have been replaced by women. In spite of the encroachments of wartime demands on manpower the output of fisheries on both coasts increased considerably last year, in response to demands from Great Britain for food supplies from Canada.

ANNUAL CONVENTION OF NEW BRUNSWICK FEDERATION OF LABOUR

THE thirtieth annual convention of the New Brunswick Federation of Labour was held in Campbellton, N.B., September 22-24, 1942, with 66 delegates and 8 fraternal delegates present.

President James A. Whitebone in his report, dwelt at some length on the present war effort, the failure of the Government to consult Labour in the formulation of its labour policies, and also the failure of many employers to accept the co-operation of their employees in the production of war materials. In spite of this he pointed out it was our duty to do everything possible to produce the much needed materials.

Report of Secretary-Treasurer

The report of the Secretary-Treasurer showed that during the year four new locals affiliated with the Federation and that there had been an increase of nearly 500 members.

The financial statement indicated that an additional $300 had been invested in Victory Bonds and that $50 had been contributed to the Queen's Canadian Fund.

Resolutions

The recommendations contained in some of the adopted resolutions were as follows:—

That no person be permitted to accept full time employment until 16 years of age.

That several isolation hospitals be established in the Province to take care of contagious diseases.

That employees of hotels, restaurants and public eating houses be required to undergo periodical physical examinations to guard against spread of contagious diseases.

That a minimum rate of 25 cents per hour be set for female labour, and that equal pay for equal work be granted female workers where they displace male workers.

That Provincial and Municipal employees be included under the Labour and Industrial Relations Act.

That Provincial and Municipal employees be included under the Wartime Wages and Control Order P.C. 5963.

That the Workmen's Compensation Act be amended so that a person receiving an injury arising out of his employment will be considered as receiving it in the course of his employment.

That in minor permanent partial disability cases no consideration shall be taken of the age of the injured person in computing the disability allowance.

That the widows allowance be increased to compensate for increased living costs.

That the Old Age Pensions Act be amended to provide for: payment of pensions at 65 years of age; that 15 years residence in Canada shall qualify a person for pension; that no deduction be made in pensions on account of income of less than $500 per year; that the pension be increased by $5 per month; and that the practice of combining the Parents' Maintenance Act and Old Age Pensions Act be discontinued.

That all Government employees be placed on a basic salary scale so that no person shall evade the present income tax.

The Convention adopted the report of its Post War Reconstruction Committee in which it was recommended that the Provincial Government, in co-operation with the municipalities throughout the Province, set up a Works Program Board, on which organized labour would be fully represented, to prepare plans for the necessary public work and the renewal and extension of existing public utilities.

Election of Officers

The following executive officers were elected: President, Jas. A. Whitebone, Saint John; Vice-Presidents, G. W. Roy Myles, Moncton, F. C. Sherwood, Campbellton, and Jas. Coffey, Milltown; Secretary-Treasurer, Geo. R. Melvin, Saint John; Legislative Representative, J. S. MacKinnon, Saint John; District Vice-Presidents were elected for the various districts of the Province in which there are affiliated organizations. Joseph Monteith of Saint John was elected as a delegate to attend the next convention of the Trades and Labour Congress of Canada, and Milltown was chosen for the next convention city.

WORKMEN'S COMPENSATION IN BRITISH COLUMBIA

Report of Commissioner Appointed to Inquire into Operation of Act

THE findings of the Commissioner appointed to inquire into the operation of the British Columbia Workmen's Compensation Act were announced on September 15. The inquiry was promised during the 1941 session of the legislature and Mr. Justice Gordon McG. Sloan of the Court of Appeal was appointed Commissioner in July, 1941. His terms of reference covered the administrative policy of the Workmen's Compensation Board, proposed amendments to the Act, questions of law and fact which might be submitted by the Government and other facts which the Commissioner might think necessary to investigate.

The purpose of the inquiry according to a statement made by the Minister of Labour at the time it was undertaken, was to meet complaints which had been made from time to time that the present compensation scheme works injustices on some groups and that the decisions of the Workmen's Compensation Board are not always in accord with the spirit of the Act. All interested groups were permitted to present their views in person, and 26 laymen-representatives made submissions.

Policy of the Board

The Commissioner found that very few of the criticisms of the administrative policy of the Board were supported by the evidence. "It is my duty," he said, "to express my firm opinion founded on the evidence that the Board is carrying out its duties honestly, efficiently and wholly in the public interest . . . the members of the Board are thoroughly competent, diligent in their duties and fully aware of their responsibilities." In this opinion the Commissioner was supported by the representatives of the major organizations making submissions.

The Commissioner emphasized the necessity of an independent Workmen's Compensation Board and stated that the appointment thereto of representatives of particular groups would be a retrograde step. A few labour organizations advocated some form of appeal from Board decisions especially on disputed medical points. The Report did not recommend appeals either on medical or legal grounds but suggested that the Board might be given the right to apply to a superior court for its opinion on questions of law.

Scale of Compensation

The Act itself came in for considerable criticism. Many proposals were made for its amendment and the Commissioner recommended the acceptance of most of them.

In particular it was considered that the scale of benefits now provided is too low. At present the maximum annual wage on which compensation may be calculated is $2,000, and it was recommended that this should be raised to $2,500. The minimum weekly compensation to disabled workmen should also be increased from $10 to $12.50 as in Ontario, Quebec and Saskatchewan (it is $15 in Manitoba). In fatal accidents the sum allowed for each dependent child up to 16 years of age should, in the Commissioner's opinion, be $10 rather than $7.50 per month. Moreover, dependent children should receive allowances up to 18 years, and "in order to provide some incentive for children between the ages of 16 to 18 years to remain at school, [I recommend] that, if at school, the allowance be increased during those two years to $12.50 per month."

In order that the section limiting to $70 the monthly payment to widow and family might be brought into line with the recommended increases for dependent children, it was suggested that the maximum should now be $80. Orphans were considered to be particularly in need of assistance and it was recommended that their allowance should be increased from $15 to $20 per month and should continue until the child reaches the age of 18. It was suggested that widows and foster mothers should receive $100 in addition to the first compensation cheque to provide for the extraordinary expenses experienced in the home on the death of the breadwinner, and that the maximum allowance to widows on remarriage be increased to $960. Finally, the maximum allowance to dependent parents should be increased from $30 to $40 per month. A proposal that non-dependent parents of unmarried workers killed in industry should receive $1,000 was rejected as being "foreign to the basic concept underlying the Workmen's Compensation legislation," but it was recommended that the definition of dependents be extended to include a wife, husband, parent or child who is able to satisfy the Board that he or she has a reasonable expectancy of pecuniary benefit from the continuance of the life of the deceased worker and that an award of up to $1,000 be permitted in such cases.

Neurosis, Hernia and Silicosis

Some extensions of the coverage of the Act was also recommended. No extension of the industrial coverage of the Act was recommended since "there are relatively few employees who would benefit should the compulsory system of coverage be extended to all industries and occupations," and a proposal for a general coverage of occupational diseases was also rejected. Substantial revision of policy was deemed necessary, how-

ever, in regard to certain specific disabilities. The problem of neurosis was considered in detail and it was concluded that a disabling neurosis, whether caused directly by the accident, or "occasioned," "excited," or "contributed to" by the accident, is a personal injury by accident within the meaning of the Act and therefore compensatable. With regard to hernia, the policy of the Board has been to compensate only that which is truly accidental. The Commissioner stated the opinion that a man who is disabled because of the aggravation of an existing condition, is entitled to benefit, and suggested as a sound compromise that compensation be paid for such proportion of the hernial disability as may reasonably be attributed to the inquiry.

In the case of silicosis it was recommended that "the Act be broadened to compensate silicotics incapacitated from silica dust in any industry in which the Board is satisfied the hazard exists," and also that a disabling silicosis which develops in less than five years should be compensatable if the dust exposure has been entirely in the province. It was also stated that a rehabilitation program is necessary for those who, though not disabled, are advised to discontinue work likely to lead to further dust exposure.

Rehabilitation and Medical Treatment

Rehabilitation was also deemed to be particularly necessary in the case of traumatic neurosis, which is generally curable, and in fact the entire problem of rehabilitation was considered in detail. It was pointed out that the British Columbia Act is the only one in Canada which does not provide a fund for a rehabilitation program, and the Board has had to do what little it could by commuting pensions and using the amount thus obtained to assist handicapped men in reestablishing themselves. The Commissioner believed that there ought to be a comprehensive rehabilitation program under the direction of the Board, the cost of which would amount to between $75,000 and $100,000 annually.

Recommendations were also made with regard to medical treatment. Men brought to Vancouver from other localities to be examined medically or treated without hospitalization ought to be paid a per diem allowance of $2.50 in addition to travelling expenses and compensation for time lost. The Act should be broadened to permit the Board to order and pay for chiropractic treatment in compensation cases. An objection of the B.C. Hospitals' Association to the Board's statutory power to fix the amount payable to hospitals was overruled, but it was suggested that the Hospital Act should be amended to meet the problem of overstay in hospitals and to protect hospitals from possible damage actions for disclosing to the Board charts of compensation patients.

Cost of Compensation

Most of the recommendations would, if implemented, have the effect of increasing substantially the cost of compensation, but the Commissioner also made a number of recommendations which were designed to relieve the burden on industry. It was pointed out that workmen's contributions, which in 1919 amounted to 73 per cent of the Medical Fund had declined to 36 per cent in 1941, and it was therefore suggested that the Board should have power to adjust on an equitable basis the present cent-a-day payments of workers. (In British Columbia, as in Alberta, workmen contribute to the cost of medical aid, the amount being deducted from their wages.) It was not recommended that any of the proposed increases in benefits should be retroactive, except those for invalid children. A proposal to add cost-of-living bonuses to compensation payments was rejected, although it was suggested that if a worker is receiving a bonus at the time of the accident it should be added to his total earnings in reckoning compensation rates.

A change in the method of assessing incapacity was recommended on the ground that some workers are being paid too much. The Commissioner was of the opinion that the payment should be measured so that the "ability of an injured man to earn his living in some employment or business suited to his residual capacity can be taken into account." The present system is to assess capacity "in simple terms of physical disability."

Other Recommendations

The Commissioner also made the following other recommendations: (1) that the present three-day waiting period be retained but that sulphur poisoning in the coal mines of Vancouver Island be made the subject of a special study by the Board because it was alleged that men are "losing wages for recurrent two and three day layoffs due to disability caused by sulphur poisoning"; (2) that the numerous accident prevention services at present existing in the province be simplified and unified and a bureau of industrial hygiene established; (3) that the efforts of the B.C. Loggers' Association to reduce accidents by a safety campaign at its own expense be recognized by a lower assessment rating if the campaign is successful; (4) that the far-reaching proposal for the inclusion within the Act of independent fishermen selling fish to particular canneries under contract be made the subject of a special study; and (5) that the Board's priority in the collection of its assessments be limited to three years' arrears.

TRADE UNIONS UNDER VICHY

Control of Organized Labour in Unoccupied France

IN a recent article entitled "Trade Unions Under Vichy", the London *Times* provides some revealing evidence on the struggle of trade unions for their existence under the Vichy regime. Vichy has contrived to twist and control the trade union organizations, and to re-group them into a symmetrical pattern more susceptible to the control of the state.

A number of decrees have limited the functions of trade unions both nationally and locally. In addition, the unions face a struggle against the corporative ideals of a single union for each industry and a single-party state. While organized labour has been placed on the defensive it, nevertheless, is offering resistance to preserve what limited rights remain.

If the complaints of the ardent collaborationists are true, the trade unions are largely responsible for the poor response to Laval's appeals for skilled workers to go to Germany. "There are some trade unionists in our zone," writes Déat, "not so very different from their opposite numbers in Vichy, who cherish dearly the sacrosanct independence of syndicalism." He accuses them of obstructing the recruitment of workers.

The Vichy government has continued to increase pressure on French workers in an effort to get them to leave for Germany. In a current statement in the press, it is reported that the Vichy Government has naturalized 500 Gestapo agents to assist in rounding up workers. These German secret police, having worked for two years in occupied France, were said to have been given citizenship rights so as to operate under full Vichy auspices not only to seek workers but also to combat unrest and disorders.

The present organization of trade unions is governed by Pétain's decrees of August 16 and November 9, 1940, and the Labour Charter which appeared on October 4, 1941. The two earlier decrees dissolved all associations "bringing together on a national scale" any kind of occupational organization, thus getting rid of the *Comité des Forges* as well as of the *Confédération Générale du Travail*. Individual trade unions and regional associations survived intact, along with most of the trusts. The long-awaited Labour Charter was given a very tepid and critical reception in both zones. It consists of some 80 articles, about a third of which depend upon subsequent decrees for their definition and fulfilment.

One such decree published in March attempted to define the functions of the trade unions. They are allowed to represent and defend professional interests, and to receive subscriptions from members. They may not disburse funds for other than welfare activities without permission of the Secretary of State for Labour. The national confederations of trade unions are replaced by an invention of Laval's, the *Comité d'Information ouvrière et sociale,* consisting of 36 members under the presidency of the Under-Secretary of Labour.

More direct local control of the trade unions is maintained through a *Comité d'Organisation* for each industry, consisting of Government nominees with immense powers. These committees are officially described as "neither deliberative assemblies nor bodies representing professional interests, but instruments of economic action called upon to take decisions, issue regulations, and impose a discipline." Though every trade union is subject to the control of the organizing committee for its branch of industry, it has no representatives on the committee. The employer, however, is often well represented, and the power of the trusts is a familiar subject of bitter complaints in both Vichy and Paris.

Social Committees

There is also, within each concern, a *Comité social d'entreprise,* constructed on a tripartite basis of equal representation of employers, technicians, and workers. At the end of July the Secretary of State for Labour issued instructions that these "social committees" were to assume all functions formerly entrusted to the workers' delegates (*délégués d'usine*), who were the voice of the trade union in each factory. In conditions of widespread unemployment and distress the employer's interests will inevitably dominate these committees, so that trade unionism has been stifled at the very point where its influence is most needed.

Single Union

Further subjection of the trade unions is foreshadowed by Vichy's campaign for the fusion of all unions in each industrial category into a *syndicat unique*. The corporative ideal of Vichy is a single union for each industry, unconnected with any wider federation of unions in kindred trades. This idea runs contrary to the whole structure and tradition of trade unionism in France. Indeed, the unified union is depicted as an integral part of the "national revolution" and a deliberate reaction against the excessive individualism and diversity of the Third Republic.

But the new plan is not finding ready acceptance. As *La Vie Industrielle* recently ad-

mitted, "the rules of syndicalist unity will be imposed with difficulty on the temperament and customs of Frenchmen: they are strongly opposed to them." Déat constantly accuses trade unionists of apathy and stubbornness in their response to the Government's appeals that they should negotiate fusion. Two organizations stand out openly in hostility to the scheme. The views of the old *Confédération Générale du Travail* and the Christian Unions still find expression in the reports of the *Comité d'études économiques et syndicales* and in the trade union paper *Au Travail* now published at Chambery. Their leaders consistently denounce all parts of the Labour Charter which would "undermine trade union freedom and would subordinate the unions and federations to the corresponding social committees." It is not Vichy's will but its weakness which allows the claim for democratic rights of free association to be so clearly voiced.

One Party

A fundamental threat to trade union independence comes from the demand, heard more insistently in Paris than in Vichy, that the counterpart to the *syndicat unique* should be its control by the *parti unique*. Ever since the famous "Charter of Amiens" of 1906, French trade unionism has remained faithful to its tradition of independence of all political parties. When the *Conféderation Générale du Travail* was founded in 1895 the first article of its constitution stated that "the elements constituting the *C.G.T.* will remain independent of all political schools."

The single-party state, as Déat never tires of explaining, must be totalitarian, and therefore the intervention of the party in every activity is "an organic necessity." It must be present in the unions as much as elsewhere, and upon its unifying activity depends the effective working of both the unions and the social committees. There must be a party-cell in each factory and each union. Political neutrality is inconceivable.

The resistance of the *Au Travail* group has been strengthened by the fact that, while each Fascist group in France presses similar arguments in favour of a *parti unique*, each asserts its own exclusive claim to be the party best fitted to wield such omnipotence. In this way some at least of the advantages of the multi-party state remain, and the unions evade the political grasp of any one of these rival groups.

From time to time trade union manifestos appear, which show how strong is the traditional labour movement. *Au Travail* published on July 25 a statement by union leaders of the unoccupied zone, demanding such radical changes as the representation of workers on the organizing committees and even on the boards of directors of all businesses, and claiming trade union independence against all governmental, political, and religious organizations. The teachers' union recently formulated its views on post-war reconstruction; and similar documents which periodically appear in the clandestine Press bear witness that some of the solidarity of the underground front is provided by trade union organizations.

Meanwhile, the moderates have decided to accept the Labour Charter critically, and to use it as a platform for defending the existing unions and preserving them from something worse. The picture of trade unionism in France to-day is one of fluidity and half-measures, and reveals every shade of opinion ranging from active collaboration through suspicious compromise to violent resistance. Organized labour is on the defensive. But German necessities and French political rivalries, Vichy's inefficiency and Laval's cautious scheming, have so far left it with an influence which, though variable and precarious, is not without importance for the immediate and the ultimate future of France.

Railway Workers in France

The curb on the functions of trade unions under Vichy rule has been accompanied by the loss of many hard won rights of French workers. One illustration of this condition is the difficulty that railway men in both the occupied and unoccupied parts of France are having to keep going. The headquarters of the International Transport Workers' Federation in a survey provided information on the longer working hours, food shortage and rising costs of living being faced by French railway workers.

The substantial progress made by the French labour movement in 1936 gave the railwaymen the forty-hour week and extension of their annual vacation to 21 days. Crippled by the 1938 strike, they were unable to put up an effective resistance when the Government decided, in 1939, to increase the working week to 45 hours. . . . . On June 16, 1941, the Vichy Government increased the average working week once more to 48 hours, which means a normal working day of as much as nine hours at some seasons of the year, with a spreadover of as much as ten and a half hours.

In July 1941 the railway administration made some allowances for undernourishment

in the case of apprentices, giving orders that as far as possible they should not be given heavy work. Reduction of their working hours was refused. In January 1942, once more, any concession in the matter of working time was flatly refused. The management claimed that it would be impossible to find the extra men who were required if the working week were shortened, as there were hardly any more unemployed. A few months later, however, there were unemployed enough to send them to Germany, ostensibly for the purpose of setting free agricultural workers who were prisoners of war. The 20,000 French railwaymen who are also prisoners of war in Germany can apparently stay there.

The men running the trains are allowed extra rations of bread, cheese, fat and wine—in theory at least. In practice, while it is generally possible to get the extra bread ration, there is nothing to be had for the other coupons. Only occasionally is there a special concession. In March 1941, for instance, when the bread ration in the unoccupied zone was reduced to about three ounces below that of the German occupied zone, the ration for locomotivemen—who are of course in constant touch with the railwaymen in the occupied zone—was increased by a like amount.

In a letter sent by the Railwaymen's Federation to the Ministry of Food, at the end of 1941, it was pointed out that the men would be unable to keep up their endeavours to maintain and increase the output of work unless prompt steps were taken to improve food conditions. The unusual conditions under which the railway men now have to work, and the state of their physical weakness made such measures urgent. The results of a medical examination of the railwaymen in the Nancy district had been very disquieting.

It is true that those who have money enough can buy as much as they want in the black market. But this cannot be done on the French railwaymen's wages, which are still based on conditions as they were at the beginning of September 1939, while official prices have increased 70 per cent, to say nothing of black market prices. It is true that two small cost of living bonuses have been granted but they are quite insufficient to meet the increased cost of living. The first one barely sufficed to cover increased taxation. The railwaymen have not been given the same cost of living bonuses as the civil service employees, while the bonuses granted to the railway pensioners are even less than those of the railwaymen proper.

THE LABOUR UNION PRESS IN THE U.S.S.R.

ACCORDING to information released by the Consulate General of Soviet Republics in New York, there are three million workers in Russian factories acting as reporters for the labour press and they are given credit for playing an important part in the greatly increased industrial production in Russia since the beginning of the war.

Daily papers are published by the largest soviet factories, particularly in the heavy industries. These compare in size and influence with the national dailies issued in Moscow. In single industry towns, where the majority of employees are engaged in one factory, the plant newspaper is the most widely-read publication in the community. Of the ten largest daily newspapers in the Soviet Union, three are labour papers: *Trud,* organ of the Central Council of Trade Unions, with a circulation of 500,000; *Goudok* published by the Railwaymen's Union; and *Uchitelskaya* Gazzette, published by the Teacher's Union.

In smaller plants, the weekly or semi-weekly printed paper is supplemented by daily hand-written wall-newspapers posted on bulletin boards in every department. At the big Stalin Motor Works, now producing tanks and armoured cars, in addition to the daily plant-wide newspaper, there are 23 daily wall papers and 326 weeklies. The papers in this one plant are staffed by 350 part-time editors and 6,000 correspondents and reporters.

Plant-wide papers are devoted mainly to solving production problems, although considerable space is also given to national and international news. Production shortcomings are dealt with in a belligerent manner which gives the labour press an appearance of constant dissatisfaction. On examination, the production items prove to be realistically hard-headed and constructive. This story, for example, appeared recently in the factory paper at the Stalin Works:

"Brother Ivanov has developed a fixture enabling him to turn out ten times the normal amount of work on his turret lathe." (Here a detailed description of Ivanov's fixture was given, accompanied by a diagram and performance figures.) "Why hasn't the superintendent seen to it that all other turret lathe operators are equipped with the same fixture and taught Ivanov's method? This is war, brothers. Superintendents and department heads have to realize that they can't be as slow in introducing new ideas as in peacetime."

Soviet labour editors use satire and humour as well as direct exhortation. Workers who

show up late or drunk, collective farmers who are earning more money than they ever saw before, and are thus content with unskilled work, workers who take advantage of high overtime earnings to relax on the job, foremen who are suspicious of new ideas and executives who fail to move with the times, are the subjects of bitter cartoons or humorous sketches written by workers.

Labour papers not only carry stories promoting more efficient use of materials and labour power, but follow up the stories in later weeks to see what has been accomplished. When a new device is reported from one part of the plant, they follow its performance from week to week. They also print the objections or counter-proposals of management and the union production committees.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for September, 1942

A TOTAL of 17,374 persons were attending classes under the War Emergency Training Program on September 30, 1942, an increase of 1,018 over the numbers in training on August 31st. During the first six months of the fiscal year a total of 67,755 persons have been in training under the program.

Of the 17,374 persons who were receiving training on September 30th, 7,040 were attending industrial classes held in Vocational Schools, 8,628 were members of the Armed Forces, and 1,706 were attending classes held in plants or at centres other than Vocational Schools.

Training in Vocational Schools

At the end of September a total of 15,668 persons were attending classes conducted in Vocational Schools under the War Emergency Training Program. Of this number 4,378 were attending full-time industrial classes to fit them for employment in war industries, while 2,573 employed persons were in the part-time industrial classes. 89 were receiving training under the rehabilitation plan for honourably discharged men of the Armed Forces while 8,628 were enrolled in classes to train enlisted men as tradesmen for the three Armed Services.

With the supply of male trainees steadily decreasing, women are being encouraged to enter the full-time pre-employment industrial classes. During the month of September 2,989 new trainees were admitted to full-time pre-employment industrial classes, 1,507 of these being men and 1,482 being women. During the month 891 men and 604 women entered part-time industrial classes.

Of the 24,101 trainees attending pre-employment industrial classes during the first six months of the fiscal year 14,015 were men and 10,086 women. During September 1,426 men and 1,149 women who had been training in pre-employment industrial classes completed their training and secured employment. During the first six months of the fiscal year 9,654 men and 7,174 women were placed in employment from these classes.

With the closing of certain non-essential industries being imminent, persons employed in such industries are being encouraged to attend part-time classes under the War Emergency Training Program to fit them for employment in essential industries.

The total enrolment in the part-time classes during the first six months of the fiscal year was 7,765 made up of 1,160 women and 6,605 men.

Training in Industry

The present fiscal year, beginning April 1st, began a period in which the Training Branch offered and industry increasingly accepted assistance in the development of training on its own premises in an organized way. The types of training assistance offered, fall under three general heads—Plant Schools, Part-time Classes, Supervision Training.

Plant Schools, carrying the certificate of approval of the Department, are now in operation in 48 plants and cover instruction in a wide variety of manufacturing operations including aircraft production, shipbuilding, both steel and wooden ship construction, machine shop and bench work, welding, power sewing, fine instrument work, etc. Assistance given by the Department to approved firms includes technical assistance in the organization of the school and the development of the curriculum, also financial assistance, where wanted, to help defray the cost of instruction and the cost of trainees' time. Since the beginning of the fiscal year 2,735 male and 1,629 female trainees

have been enrolled in plant school organizations, the current enrolment numbering 753 male and 508 female trainees.

Part-time classes in Industry are conducted at the request of the employer, usually to upgrade workers to higher skills, and are held on company premises with instructors usually supplied by the Department from outside training centres. Sometimes, when available, instructors are supplied by the companies concerned. In these classes, as in plant schools, a wide variety of subjects is covered including, mathematics, blue-print reading, welding, first-aid, coppersmithing, electricity, mould loft work, etc. Assistance is rendered by the Department both financial and technical through the provision and payment of instructors and in the laying out of courses.

Enrolments since the commencement of the fiscal year in part-time classes in industry numbered 1,475 men and 344 women, current enrolments being 377 and 68 respectively.

The first unit of Supervision Training for industry was introduced and offered at the end of May under the title "Job Instructor Training Plan". This plan, designed to increase the instructing ability of foremen, supervisors, charge hands etc. to train a new man on a new job or to pass on new skills to old hands, has been very widely accepted and enthusiastically received. Reports from trainers who were coached for the participating companies by specialists attached to the Department and who were men chosen by the companies from their staffs, indicate that highly successful and practical results are being obtained through the application of Job Instructor Training principles. To date some 5700 supervisors have been certificated as War Production Job Instructors under the program and firms report that they anticipate the issuance of an additional 5,000 certificates on the basis of existing staffs. An interesting development took place recently when 24 training officers of the R.C.N. and R.C.N.V.R. drawn from 18 training centres across the Dominion qualified as trainers under the Job Instructor Training Plan. Reports are beginning to come in that indicate the Navy too is finding practical benefits from its use.

Below is shown a brief summary indicating the numbers afforded training, placed in employment, and the numbers who have completed their training in the various classes carried on under the War Emergency Training Program. The totals given are for the six-month period April 1, 1942 to September 30, 1942.

WAR EMERGENCY TRAINING—TOTALS FROM APRIL 1, 1942, TO SEPTEMBER 30, 1942

—	(1) Numbers Provided Training	Numbers placed in employment from pre-employment industrial and rehabilitation classes	Numbers who have completed courses in classes other than pre-employment and rehabilitation classes
Training in Vocational Schools

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Statutory Holidays—Military Call-up—Women in Metallurgical Works—Japanese Workers—Compensation to Seamen—Living Allowances—Commission on Steel Dispute—Minimum Wages in British Columbia and Quebec—Alberta Motion-Picture Projectionists—Workmen's Compensation in British Columbia—Window-Cleaners in Quebec

THE Federal Government has issued a declaration in regard to the observance of statutory holidays in wartime and made it mandatory for the Public Service. The machinery for calling up men for military service is to be transferred to the Department of Labour to co-ordinate it with National Selective Service. The Order in Council permitting women to be employed in the plant of the International Nickel Company has been amended and regulations issued setting forth the conditions under which they may be employed. Coverage of the Order in Council relating to the employment of Japanese in work camps or by the British Columbia Security Commission has been extended and the Minister of Labour has made regulations in regard to conditions of work. The Order in Council providing compensation to seamen for war damage to their personal effects has been amended and consolidated. Supplementary living allowances are to be paid to workers producing airplane spruce in the Queen Charlotte Islands. A Royal Commission has been appointed to investigate the wages dispute involving steel plants in Sault Ste. Marie and Sydney.

In the provincial field, British Columbia has consolidated three minimum wage orders applying to stationary engineers and male and female janitors in apartment houses, and Quebec has renewed its Order governing the wholesale foodstuffs trade in Quebec District. Alberta has accepted a War Emergency Training Program course in lieu of apprenticeship for persons seeking motion-picture projectionists' licences. The British Columbia Workmen's Compensation Board has added several diseases to its schedule of compensatable industrial diseases and Quebec has amended its regulations protecting window-cleaners.

Dominion

Statutory Holidays

A declaratory Order in Council stating the Government's policy in regard to the observance of holidays in wartime was issued September 25 (P.C. 8682). Apart from Sundays or other days observed as a weekly rest-day, the Government recommends the observance of the following six holidays: New Year's Day, Good Friday, the first Monday in July, Labour Day, Thanksgiving Day and Christmas Day. Reasonable time should be granted employees for the performance of their religious duties. The terms of collective agreements inconsistent with the declared policy should be suspended by mutual consent but are to remain in force pending such suspension. The Order is mandatory for members of the Public Service of Canada. The provisions of the Dominion Day Act have been suspended to permit the observance of Dominion Day on the first Monday in July for the duration of the war.

Military Call-Up Transferred to Department of Labour

To co-ordinate the allocation of man-power between industry and the armed forces, the administration of the National War Services Regulations, 1940 (Recruits) under which men may be called up for compulsory military training (Labour Gazette, 1940, p. 916; 1941, p. 1237) is to be transferred from the Minister of National War Services to the Minister of Labour on December 1, 1942. This change was authorized by P.C. 8800, September 26, 1942.

Women in Metallurgical Works

The Order in Council permitting women to be employed in certain occupations by the International Nickel Company at its Sudbury plant (Labour Gazette, September, 1942, p. 1044) has been amended by an Order in Council passed September 23, (P.C. 8603) to extend the permission to the operations of the Company in the vicinity of Port Colborne, Ontario.

Regulations governing the conditions of work for women employed by the Company under these Orders were issued by the Dominion Minister of Labour on September 28. They are to be administered by the Ontario Department of Mines.

The regulations stipulate that women shall be employed on the surface only and fix a

minimum age of 18 years for female employees. All women must be medically examined before employment to determine their fitness for the work. Wages are to be fixed in accordance with rulings of the National War Labour Board which recently advocated the principle of equal pay for equal work (Labour Gazette, September, 1942, p. 996).

Hours of work are not to exceed eight a day or 48 a week. When changing shifts, however, women may work two eight-hour shifts in 24 hours with an eight-hour rest between the two shifts. Also, when relief fails to report for duty, women may do overtime up to four hours but in no case may their work-week exceed 60 hours. A half-hour must be permitted for lunch. Shifts for women may not begin or end between 12 midnight and 6 a.m., and if it is necessary for a worker to leave the plant between 12.30 a.m. and 6 a.m., she must be provided with transportation to her home.

Facilities which must be provided for women workers include adequately equipped dressing-rooms, rest-rooms, and wash-rooms separate from those furnished to the men, a sufficient supply of wholesome drinking water with sanitary drinking arrangements, suitable lunch rooms separate from the wash-rooms and a sufficient number of seats to enable the women to sit when their work does not require them to stand.

As regards supervision, a qualified matron or attendant must be on duty between midnight and 6 a.m. and on all shifts with more than 12 women workers. If women are employed on shifts in an isolated location, not less than two must be assigned to any such shift.

Women are forbidden to lift unduly heavy weights and to clean or oil any machinery in motion if it is necessary to touch the moving part. All except those employed in offices must keep their hair tightly confined in a close-fitting cap and are required to wear clothing selected in the interests of safety. Where necessary, proper measures against dermatitis and other occupational diseases, especially lead poisoning, are to be taken.

A list of occupations approved for women in the mine plants is appended to the regulations. It includes office and clerical work of all kinds, operation of elevators and trucks, employment as helpers in a wide variety of specialized jobs and such technical positions as reagentmen, analysts, etc.

Japanese Workers

The Order in Council establishing work-camps for Japanese Nationals evacuated from the protected area of British Columbia and prescribing working conditions for such enemy aliens whether in work-camps or employed by the British Columbia Security Commission (P.C. 1348, February 19, 1942, Labour Gazette, September, 1942, p. 1045) has been further amended to extend its application to other persons of Japanese racial origin by P.C. 8173 of September 11. Originally it was planned that persons born of Japanese parents in Canada or Japanese naturalized as Canadians would be invited to enlist in a Canadian Japanese Construction Corps but the formation of the Corps has been postponed. (Labour Gazette, March, 1942, p. 254).

Under authority of P.C. 1348, a wage schedule for various types of skilled Japanese workers employed in work-camps by the British Columbia Security Commission has been approved by the Minister of Labour. P.C. 1348 stipulates that unskilled workers are to be paid 25 cents an hour for an eight-hour day and a 48-hour week—a rate which represents 55·5 per cent of the prevailing wage-rate in the Yellowhead-Blue River District. The rates set for skilled workers are the same percentage of prevailing rates. A wage schedule for Japanese professional workers such as doctors, nurses, etc., employed by the British Columbia Security Commission has also been approved.

On August 31 regulations retroactive to February 19, 1942, were issued under authority of P.C. 1348 in regard to the payment of workmen's compensation to Japanese workers in work-camps or employed by the British Columbia Security Commission. P.C. 1348 brings these classes of workers under the Government Employees' Compensation Act and stipulates that in cases of temporary disability they are entitled only to first aid and medical and hospitalization expenses, but for permanent disability they may receive compensation up to two-thirds of their average weekly earnings regardless of any minimum rate of compensation in effect in any province at any time.

The regulations declare that injured workers are to receive medical and hospital care in accordance with Workmen's Compensation Act regulations and rates in effect in the district where the care is given. In cases of permanent disability or death, the percentage of disability and the form and amount of compensation are to be determined after the war by the Workmen's Compensation authorities of the province where the accident occurred. No compensation will be paid during the war. In computing such awards the authorities must consider all payments made by the Dominion Government to or on behalf of the claimant except the cost of medical and hospital care for himself and his dependents, direct relief, earned wages and

dependent child allowances. In fatal accidents, no payment will be made to any heir, representative or dependant residing outside Canada at the time of the accident.

In determining average weekly wages to decide the limit of compensation, the workers' earnings are to be averaged over the 12 months immediately preceding the accident or over any shorter period of employment prior to the accident. Compensation is not to be retroactive beyond the last date upon which the beneficiary was employed under P.C. 1348 or upon which he was in receipt of subsistence in any form from the Dominion Government under P.C. 1665 (Labour Gazette, March, 1942, p. 254). In no event is interest to be payable on any compensation.

Seamen

The Order in Council relating to the payment of compensation to merchant seamen and salt-water fishermen who suffer war damage to their personal effects while at sea (Labour Gazette, 1939, p. 1203) has been amended and consolidated by the Compensation to Seamen (War Damage to Effects) Regulations, 1942, (P.C. 149/8785) passed September 26 and effective August 1, 1942.

The amendments increase the maximum amounts of compensation payable to certain classes of seamen and extend the coverage of the Order to include damage to personal effects sustained by seamen when proceeding by land, sea or air outside of Canada to or from their respective ships or when on leave from their ship in a port outside of Canada. The Orders providing compensation to seamen in cases of disability or death due to enemy action (Labour Gazette, 1939, p. 1202; 1941, p. 650) have already been extended to cover these circumstances (Labour Gazette, June, 1942, p. 691).

The Order applies to the masters and crews of all ships of Canadian registry or licence, to Canadians employed on non-Canadian ships engaged in war work on behalf of the British Commonwealth or its Allies, to members of the Pilotage Service, to persons employed on pilot or light vessels and to Canadian salt-water fishermen. There is no longer any distinction in the matter of compensation between Oriental ratings not domiciled in Canada and other seamen.

Allowances for Loggers in Queen Charlotte Islands

To induce workers employed in the production of airplane spruce in the Queen Charlotte Islands to remain in such employment, a supplementary living allowance of not more than $5 a week has been authorized for them by P.C. 8974, passed October 1. The allowance will be paid by the Government only to such workers as the Minister of Labour, with the concurrence of the Timber Controller, declares to be essential. Payment will be deferred until the worker has completed four months' service subsequent to October 1 but he will receive an allowance for the entire period of employment.

Industrial Disputes Investigation Act and Inquiries Act

A Royal Commission to investigate the recent dispute over wage rates in steel plants at Sault Ste. Marie, Ontario, and Sydney, Nova Scotia, was appointed by an Order in Council passed September 14 (P.C. 8267). The Commission is authorized to inquire into the facts of the dispute which arose over the rejection of the employees' applications for wage increases by the Regional War Labour Boards concerned, and to recommend what adjustments, if any, in the rates are justified under the terms of the Wartime Wages Control Order (P.C. 5963, Labour Gazette, July, 1942, p. 778). The Commission is to be composed of J. King Gordon nominated by the Canadian Congress of Labour, James T. Stewart representing the employers and F. H. Barlow, K.C., Master of the Supreme Court of Ontario, Chairman.

Provincial

Alberta Theatres Act

Alberta has accepted the course given under the Dominion-Provincial War Emergency Training Program on the operation, care and maintenance of motion-picture equipment as an alternative to the six-months' apprenticeship required of applicants for a third-class motion-picture projectionist's licence (Labour Gazette, June, 1942, p. 691). The new regulation, gazetted September 15, stipulates, however, that the final month of the course must be served in a projection-room on standard 35 millimetre equipment in operation while the theatre is open to the public. Not more than one student or apprentice may be employed for each full shift in a theatre, and all students must be under the direct supervision of a projectionist holding the licence appropriate for the class of theatre.

63621—5

British Columbia Minimum Wage Act

Three new orders, effective September 21, were gazetted September 17, one under the Female Minimum Wage Act and two under the Male Minimum Wage Act.

Order 18 (1942) applying to stationary steam engineers consolidates an Order issued in 1935 and its amendments (Labour Gazette, 1935, pp. 243, 427; 1936, p. 699; 1937, p. 645). One change removes from the class of workers covered by Order 18, workers employed as janitor-engineers in apartment blocks to which Order 43 (1942) below applies.

Order 43 (1942) and Order 44 (1942) relate respectively to male and female janitors in apartment buildings. The new Orders are consolidations of the earlier Orders as amended. (Labour Gazette, 1937, p. 645; 1941, pp. 138, 959). The term "janitor" has been extended in Order 43 (1942) to include janitor-engineers.

British Columbia Workmen's Compensation Act

By an Order in Council gazetted September 10, British Columbia has added several diseases to the schedule of industrial diseases for which compensation is payable under its Workmen's Compensation Act. The additions include dermatitis from contact with alkalis, soaps, chromates or chromic acid, or from glue used in ply-wood or airplane manufacture; poisoning from solvents containing acetates, alcohols or chlorinated hydrocarbons or from wounds by yellow cypress or various types of cedar woods; vascular disturbances in the upper extremities caused by continuous vibration from pneumatic or power-driven drills, riveting machines or hammers used in the construction industry; aseptic inflammation affecting the sheaths and tendons of the wrist, resulting from processes involving constant vibration or excessive use of the forearm muscles; conjunctivitis, bronchitis, tracheitis, pulmonary oedema or gastric irritation caused by gases and fumes from oxy-acetylene or electric arc cutting or welding; and carbon monoxide and carbon dioxide poisoning by fumes from coke used in the shipbuilding industry.

Quebec Industrial and Commercial Establishments Act

The regulation for the protection of window-cleaners issued under this Act (Labour Gazette, 1940, p. 125) has been reworded by an amendment gazetted September 19. The new regulation unlike the old specifically states that the owner is responsible for supplying window-cleaners with a movable platform or safety belts. As before, if the latter are used, the window must be fitted with hooks or anchors to which the belts may be secured. Supplementary precautions must be taken if the windows are too large or too narrow-brimmed. This regulation applies to all windows cleaned from the outside, whether or not they may be opened from the inside. The former regulation exempted inside-opening windows.

An identical regulation has been issued under the Public Building Safety Act replacing a regulation passed in 1938 (Labour Gazette, 1939, p. 159).

Quebec Minimum Wage Act

Order 33 relating to the wholesale foodstuffs trade in the Quebec district (Labour Gazette, 1939, p. 1113; 1940, pp. 243, 447) has been renewed until January 1, 1944, by a notice gazetted October 3.

Women in U.S. Ammunition Plants

A bulletin entitled "Women's Employment in Artillery Ammunition Plants, 1942" has been issued by the Women's Bureau of the United States Department of Labour. The writer, Martha J. Ziegler, describes in detail the various kinds of occupations in which women are engaged in these plants, such as the making and loading of powder bags, the assembling and loading of shells and cartridge cases, and of small parts such as fuzes, boosters, primers, and detonators. Working conditions, safety measures, wages, hours, and food service are also dealt with by the writer.

The bulletin states that although prior to the outbreak of war some plants had planned to use 35 to 40 per cent women, female labour requirements have now generally been raised to 60 or 70 per cent, while some companies expect to be employing as high as 80 to 90 per cent women. At the time of the survey, some 25,000 women were employed in this industry, but when peak production is reached, a total of 100,000 women is expected to be employed by all plants producing ammunition in the United States.

Co-operation in Great Britain

Membership in British co-operatives increased during the year 1941, according to official figures prepared by the Co-operative Union Research Department in Great Britain and appearing in the *Co-operative News* for September 5. Total membership of retail societies was 8,773,255, an increase over the 1940 figure of 56,361, or 0·64 per cent.

The increase is said to be the smallest recorded since 1923, but the Union declares that it is remarkable that any net increase can be claimed with large numbers of men and women called into the armed forces and considerable migration occurring among the civil population.

The total trade of the retail societies reached the record figure of £302,246,329, an increase of £3,365,339.

SOCIAL SECURITY IN AUSTRALIA

Parliamentary Committee Issues Reports Dealing With Pensions, Unemployment and Housing

THE Parliamentary Joint Committee on Social Security appointed by the Australian Commonwealth Parliament in July, 1941 "to inquire into . . . ways and means of improving social and living conditions in Australia and of rectifying anomalies in existing legislation" has now issued four interim reports dealing with pensions, unemployment and housing.

The first report, issued September 24, 1941, deprecated the attitude that the development of a social security program should wait until after the war, pointing out that such a program could improve both the morale and the efficiency of workers in time of war. The Committee stressed the need for a Commonwealth Social Security Act to secure uniformity of legislation and an integrated program, and favoured a scheme of Commonwealth grants-in-aid to States undertaking specific social services on lines laid down in Commonwealth legislation. The Committee suggested the employment of research and social workers by the Social Services Department which in 1940 was made a part of the Commonwealth Department of Labour and Industry. It also recommended the removal of anomalies in Commonwealth legislation relating to invalid and old-age pensions and maternity allowances, and the development of a Commonwealth scheme of unemployment benefits and pensions for widows, children and dependents of pensioners. At present only one State, Queensland, has unemployment insurance legislation and only two, Victoria and New South Wales provide pensions for widows.

Problem of Unemployment Caused by War Conditions

The second report of the Committee issued on March 6, 1942, dealt with the question of unemployment due to war conditions. The Committee took the view that the wartime obligation imposed on all workers to be at the disposal of the Government should not be unilateral, but that there should be an obligation on the Government to maintain workers during unemployment in the same way as soldiers are paid whether fighting, training or resting. A comprehensive scheme of benefit payments to protect persons against distress arising from unemployment was recommended and it was suggested that the scheme be administered by the Department of Social Services and financed by a graduated tax on incomes. The Committee also urged the establishment of a central co-ordinating authority to deal with any civil emergency caused by enemy action in Australia.

The third report of the Committee presented on March 25, considered unemployment as the social and economic problem which constituted the greatest threat to the achievement of a decent standard of living. It was the Committee's opinion that seasonal, casual and "frictional" unemployment could not be appreciably reduced but that Government policy could minimize technological and cyclical unemployment. The Committee felt that contributory unemployment insurance schemes such as the one in Queensland only partially met the problem because they cover only the employed population and exclude farmers, shopkeepers and other persons working for themselves. Moreover, the benefits provided by an actuarially sound scheme are often inadequate and have to be supplemented by direct relief in many cases. The Committee declared that every unemployed person must be provided with work or maintenance as a right but a person should not be able to claim maintenance until he had complied with a work test. It was estimated that the "hard core" of unemployment in Australia constitutes about 30,000 persons at present but that a substantial number, particualrly of the younger persons, could be fitted for useful work by vocational training.

Planning Against Post-War Unemployment Advocated

The Committee advocated immediate planning to provide against post-war unemployment and suggested that the Social Services Department co-ordinate the activities of State and local government authorities in this field. Measures proposed to meet the problem included the establishment of an efficient system of employment exchanges which could be developed from the organization of local offices now under the Director-General of Man-Power and from the existing State labour exchanges, the extension of State educational systems to include youth-training schemes, and the planning of a National Works Development policy which would embrace a housing and slum-clearance program. In regard to the more immediate social problems arising from the war, the Committee urged that the administration of wartime relief and the care of evacuees be under the Social Services Department which should establish branch offices in the larger provincial centres.

63621—5½

The fourth report of the Committee, issued on May 20, was a comprehensive study of housing problems. The inadequacy of the Commonwealth Housing Act, 1927-1928, and of the various schemes of housing assistance administered by the States was indicated by the estimated deficiency of over 100,000 houses and the existence of about 50,000 sub-standard dwellings in Australia at present. The Committee recognized that the return from the construction of houses for low-income groups was not sufficient to attract private enterprise, but declared that the provision of adequate housing was a national responsibility because of the far-reaching effects of slums on health and welfare. It recommended the establishment of a Commonwealth Housing Planning Authority to formulate and supervise a national post-war housing policy which would be executed by State Housing authorities under uniform Federal and State legislation. In the opinion of the Committee, the carrying out of this plan should provide employment for at least 25 per cent of the labour which will be released from wartime activities at the close of the war.

The Committee made detailed recommendations in regard to the financing at low rates of interest or by subsidies of schemes by which low-income workers could rent or purchase homes, slums could be cleared and minimum housing standards established. It urged research into means of reducing the cost and improving the quality of homes and suggested that the planning of housing be linked up with general post-war economic planning so that new housing projects would be located where the post-war industries are to be developed and a better distribution of population secured.

The Personal Factor in Accidents

A pamphlet of this title has recently been issued by the Industrial Health Research Board of the British Medical Research Council as Emergency Report No. 3. The Board has published two previous Emergency Reports (LABOUR GAZETTE, 1940, p. 564; May, 1942, p. 511). Its members remark that in war-time many people regard a high accident rate as a regrettable necessity, especially in view of the great risks assumed by members of the Forces, but they point out that the Services themselves are most careful to eliminate any unnecessary risks and, apart from all other considerations, this is merely sound economy whether in the Forces or in industry.

The present Report does not deal with the dangers of factory operations themselves but with those personal characteristics of the individual operative and his reaction to his environment which help to cause accidents. It is divided into two parts. Part I is concerned with certain external factors which affect all workers though in different degrees, and Part II is an analysis of the individual differences which make some persons more liable to accidents than others even under the same working conditions.

Excessive hours of work, temperatures above or below 65°-69° F., and inadequate ventilation and lighting are all found to be factors which increase the liability to accidents of workers generally. Inexperience is also a fruitful cause of accidents, whether it be inexperience with factory conditions generally or with a particular type of work. Moreover, quite apart from experience, young people of about 14 to 23 are found to be more liable to accidents than older people. Accident rates are also high among people who are physically unfitted to their work or are mentally ill-adapted because their jobs are either below or above their capacity. Finally, the fatalistic attitude of management and the carelessness of workers, especially highly proficient workers, are often important factors. Several methods are suggested for dealing with these various causes of accidents.

With regard to individual characteristics, it has been established that certain persons have a natural proneness to accidents, i.e., that under any given set of external conditions they will suffer more accidents than other persons working under identical conditions. It is obviously desirable that such persons should not be employed in dangerous occupations, but the difficulty is to detect them before they have already suffered a long series of accidents. The Board has devised certain tests of hand and eye coordination by which can be distinguished many though not all of the personal characteristics which make for a high degree of accident proneness. If these tests are properly applied many persons who are particularly liable to accidents will be discovered before they are placed in dangerous jobs. Because of the incompleteness of the tests, however, there are some who will be passed who nevertheless are of high accident proneness. It is important, therefore, that proper accident records should be kept so that such persons may be discovered as soon as possible. Detailed recommendations are made as to the method in which records should be kept.

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Insurance Registration as at October 1—Statement of Unemployment Insurance Fund—Report of Employment and Selective Service Offices—Employment Conditions at end of September

REPORTS from local offices of the Unemployment Insurance Commission showed that at October 1, 1942, 158,152 employers and 3,125,762 employees were registered. Of the latter 2,563,385 were insurable and 562,377 were uninsurable.

The insurable group consisted of insurable employees of registered firms and unemployed males whose last employment was insurable. The uninsurable group consisted of uninsurable employees of registered firms, partners and proprietors of these firms, unemployed males whose last employment was uninsurable, and women between the ages of twenty and twenty-four not engaged in insurable employment.

Operational areas have not yet been assigned to Employment and Selective Service Offices recently established. Accordingly, these offices are not to date handling the registration of employers and employees and are not listed.

The Interest column represents the interest received on the due dates of the various Government bonds and includes accrued interest at the time of purchase. This figure does not include the accrued interest earned to August 31st

'er and 'ee—employers' and employees' contributions.

Report of Employment and Selective Service Offices for August, 1942

During the month of August, 1942, reports received from Employment and Selective Service Offices showed a loss of nearly 7 per cent in the average daily placements effected when compared with those of the preceding month, but a gain of nearly 8 per cent in comparison with August last year. All industrial groups, except agriculture, logging, transportation and services recorded increases over August, 1941, the most noteworthy being in manufacturing, followed by moderate gains in trade, construction, mining and finance. A marked decline was registered in services and substantial reductions in agriculture and logging, but that in transportation was small.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

When comparison is made with July, 1942, except for a noticeable gain in agriculture and a nominal increase in mining, all groups recorded a loss, the most outstanding being in construction, services and manufacturing.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and placements effected for each 100 applications for work registered each month at the employment offices throughout Canada. It will be seen from the graph that the trend of the curve of vacancies and of placements in relation to applications showed an upward tendency. The ratio of vacancies to each 100 applications being 88·3 during August, in contrast with a ratio of 75·0 during the corresponding period of 1941 and of 83·3 at the end of July of this year. The ratios of placements to each 100 applications during the period under review was 53·6, compared with 70·3 during the corresponding month 1941, and 48·6 at the end of July, 1942.

The average number of vacancies reported daily by employers to the offices throughout Canada during August, 1942, was 3,194, compared with 3,567 during the preceding month and with 1,919 in August a year ago.

The average number of applications for employment received daily by the offices during the month under review was 3,617, in comparison with 4,280 in July, and with 2,558 during August last year.

The average number of placements made daily by the office during August, 1942, was 1,937, of which 1,692 were in regular employment and 245 in work of one week's duration or less, compared with a total daily average of 2,079 during the preceding month. Placements in August a year ago averaged 1,798 daily, consisting of 1,143 in regular and 655 in casual employment.

During the month of August, 1942, the offices referred 57,526 persons to vacancies and effected a total of 50,360 placements. Of these, the placements in regular employment were 43,995, of which 34,362 were of men

and 9,633 of women, while placements in casual work totalled 6,365. The number of vacancies reported by employers was 59,851 for men and 23,176 for women, a total of 83,027, while applications for work numbered 94,018, of which 66,429 were from men and 27,589 from women. Reports for July, 1942, showed 92,719 positions available, 111,269 applications made and 54,049 placements effected, while in August, 1941, there were recorded 49,884 vacancies, 66,494 applications for work and 46,740 placements in regular and casual employment.

The following table gives the placements effected by employment offices, each year, from January, 1932, to date:—

Year	Placements		
	Regular	Casual	Totals
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942 (8 months)	216,476	63,916	280,392

Nova Scotia and Prince Edward Island

During the month of August, 1942, positions offered through Employment and Selective Service Offices in Nova Scotia and Prince Edward Island were 25 per cent fewer than in the preceding month, but 19 per cent above the corresponding month of last year. There was a decrease in placements of 27 per cent when compared with July and of over 9 per cent in comparison with August, 1941. When comparing placements by industrial divisions with August of last year, the only gain of importance was in manufacturing, which was more than offset by a heavy loss in services. There was a moderate decline in construction, and smaller decreases in transportation and trade, but mining showed a small increase and the changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: Construction, 952; manufacturing, 829; services, 702; trade, 97, and transportation, 95. During the month 1,941 men and 392 women were placed in regular employment.

New Brunswick

Opportunities for employment, as indicated by orders received at Employment Offices in New Brunswick during August, were 15 per cent fewer than in July, but 231 per cent above August, 1941. There was a decrease of 17 per cent in placements, when compared with the previous month, but an increase of 105 per cent over the corresponding month of last year. With the exception of a moderate decline in services, and a small loss in agriculture, all industrial groups participated in the increase in placements over August, 1941. The most important gains were in construction, manufacturing and transportation. Industries in which employment was found for over 100 workers, included: Construction, 831; services, 487; manufacturing, 344; transportation, 239, and trade, 140. Placements in regular employment numbered 1,595 of men and 305 of women.

Quebec

There was a decrease of 30 per cent in the number of positions offered through Employment Offices in the province of Quebec during August, when compared with the preceding month, but an increase of 40 per cent in comparison with the corresponding month of last year. Placements were over 2 per cent higher than in July and over 3 per cent above August, 1941. Although placements for the province as a whole showed only a slight increase over August, 1941, there was a considerable variation in placements by industrial groups. The most noteworthy changes were a gain in manufacturing and a decline in services. There were fairly substantial increases in construction and trade and losses of similar proportions in logging and transportation. The changes in other groups were small and included gains in mining and finance, and a loss in agriculture. Placements by industrial divisions included: Manufacturing, 6,311; construction, 3,963; services, 1,194; trade, 920; transportation, 210; mining, 144, and logging, 111. There were 9,874 men and 2,522 women placed in regular employment.

Ontario

The demand for workers as indicated by orders listed at offices in Ontario during August was nearly 11 per cent less than in the preceding month, but 79 per cent above the corresponding month of last year. There was a decrease of 10 per cent in placements when compared with July, but an increase of 11 per cent in comparison with August, 1941. Placements in manufacturing industries were considerably higher than during August of last year, but large decreases were reported in services, construction, logging and agriculture. All other groups showed increases, the most important of which, was in trade. Placements by industrial divisions included: Manufacturing, 7,281; services, 3,061; construction, 2,444; agriculture, 1,334, trade, 963; mining, 619; transportation, 569 and logging, 348. During the month 10,342 men and 3,946 women were placed in regular employment.

* 1,047 placements effected by offices now closed.

MANITOBA

Employment Offices in Manitoba were notified in August of 44 per cent more vacancies than in July, and of 20 per cent more than during August, 1941. There was an increase of 10 per cent in placements when compared with the preceding month, but a decline of 19 per cent in comparison with the corresponding month of last year. Placements in agriculture and services were considerably below August, 1941, and there was a small decline in construction. These losses were partly offset by fairly large gains in manufacturing, trade and mining, supplemented by smaller increases in transportation and logging. Industrial divisions in which most of the placements were effected during the month

were: Agriculture, 1,083; services, 954; manufacturing, 562; construction, 459; trade, 322, and mining, 144. There were 2,400 men and 423 women placed in regular employment.

Saskatchewan

During August, vacancies offered through Employment Offices in Saskatchewan were 48 per cent more numerous than in the preceding month and 23 per cent above the corresponding month of last year. Placements, however, were over 5 per cent fewer than in July and 35 per cent below August, 1941. The decrease in placements from August of last year was due to declines in agriculture, services and construction, as except for a nominal loss in logging, all other groups showed improvement, the most important of which were in trade and manufacturing. Placement by industrial divisions included: Agriculture, 778; services, 637; trade, 234; construction, 208, and manufacturing, 153. During the month 1,313 men and 283 women were placed in regular employment.

Alberta

Employment opportunities as indicated by orders received at Employment Offices in Alberta during August were nearly 4 per cent better than in the preceding month and 55 per cent above the corresponding month of last year. There was a decrease of nearly 6 per cent in placements when compared with July, but an increase of 18 per cent in comparison with August, 1941. All industrial divisions, except agriculture and logging participated in the gains in placements over August of last year, and although the largest change was a decline in agriculture, fairly large increases in construction, trade and manufacturing more than offset this loss. The largest number of placements recorded during the month occurred in the following industries: Construction, 1,254; services, 1,035; agriculture, 737; manufacturing, 472; trade, 293, and transportation, 169. Placements in regular employment numbered, 2,863 of men and 730 of women.

British Columbia

Orders listed at offices in British Columbia during August called for 11 per cent more workers than in the preceding month and 206 per cent more than during the corresponding month of last year. There was a decrease of over 10 per cent in placements when compared with July, but an increase of 59 per cent in comparison with August, 1941. A substantial increase in the manufacturing industries was mainly responsible for the gain in placements over August of last year, although all other industrial groups, except services, showed improvement under this comparison, the most important of which were in construction, logging and trade. Placements by industrial divisions were: Manufacturing, 2,315; services, 1,257; construction, 1,217; trade, 273; logging, 227; agriculture, 192, and transportation, 180. There were 4,034 men and 1,032 women placed in regular employment during the month.

Employment Conditions at the end of September

Placement activities, as reported by employment and Selective Service offices during the month of August, 1942, together with statistical summaries for that period, are dealt with in an earlier section of this report. Later reports received from these offices indicate that conditions at the end of September were as follows:—

Farming activities in the Maritime Provinces were confined chiefly to the harvesting of root crops with potato picking in Prince Edward Island being pushed forward to get the crop to the mainland before freeze up. Fishermen are fully employed, some being profitably engaged in gathering carageen moss. There is a heavy demand for loggers and general bush hands with a shortage of workers anticipated. Employment in coal mining was steady with minor stoppages due to machine failures. Manufacturing industries were operating at a high level and the demand continued for all types of labour. Pulp and paper production had fallen off in some centres. There was a fair demand for building tradesmen and in some cases construction work had been curtailed due either to an inadequate supply of labour or shortages of materials. Transportation continues to be heavy. There is a continued demand for hotel, restaurant and domestic workers, but persons usually engaged in this work prefer to take employment in munition plants and similar industries.

With the completion of harvest operations in Quebec, farm hands were released for other work, principally in lumber camps or on road construction. There was a heavy demand for men for bush work with comparatively few applicants available and an acute shortage of workers for pulpwood and lumber camps was reported throughout the province. The shortage of miners and skilled labourers continued in all mines except gold, where the demand had decreased. Textile plants were

working at full capacity and there was renewed activity in pulp and paper. Silk and woollen mills were running full time and the larger sawmills were similarly employed. A shortage of skilled help existed in the iron and steel industries. Building construction was very active and the demand for bricklayers, carpenters and painters was heavy in several localities. The construction of plants at Shawinigan Falls and La Tuque is nearing completion. Trade, both wholesale and retail, was good. Freight and passenger traffic were heavy but highway traffic was reduced. It was impossible to meet the many requests for domestics, waitresses and hotel employees.

In Ontario some slackening of farm activity generally was noticeable. The completion of the tobacco harvest had released workers for tomato and fruit picking in the Niagara Peninsula. The shortage of pickers had also been relieved by voluntary help and some of the provincial farm service camps had been closed. Farm owners and farm hands are now turning to bush operations and industrial employment for the winter months. The demand for all types of bush workers continues unabated and concern is being expressed by operators regarding the need for help. Mining activity has been curtailed due to a shortage of mine workers. Manufacturing plants are operating at a high level of activity with a pronounced shortage of labour in all branches. Efforts are being directed to meeting the needs of all high priority groups of industry. More female workers are being placed in the iron and steel industries on work which until recently had been considered too heavy for women. Many factories, previously engaged in the manufacture of non-essential products are now being geared to war industry. A shortage of canning help was being met by volunteer labour, such as students, women's organizations and members of the armed forces from nearby camps. Construction continues to be active throughout the province with a decided scarcity of suitable workers. In some instances the work of skilled tradesmen has been curtailed due to the lack of unskilled help. There is a steady demand for railway maintenance gangs, but few men appear willing to accept this work. There is a scarcity of store and office help with suitable applicants preferring other employment where wage rates are higher. The supply of institutional, hotel, restaurant and domestic workers is inadequate to meet the demand as an increasing number of females, previously employed in this way, is now working in munition factories or war industries.

In the Prairie Provinces heavy rains delayed threshing operations and in some areas of Saskatchewan not more than 15 to 20 per cent of the wheat crop has been threshed. The scarcity of harvest help aggravated the situation. There is little likelihood of meeting the general demand for loggers and pulp cutters and although the services of many farmers will be available for this work after harvest the available supply of experienced men for woods operations was inadequate. There was a serious shortage of miners in the Alberta coal fields and also in the lignite area of southern Saskatchewan. From central Saskatchewan a number of girls were secured for munitions plants in Ontario. Sugar factories, brick and pottery plants in southern Alberta found difficulty in securing the help they required. Construction of various defence projects throughout the three Prairie Provinces was retarded on account of a scarcity of carpenters and building labourers. To alleviate conditions in Calgary, sixty women were placed as unskilled labourers on construction work. Wholesale and retail trade showed improvement but there was no improvement in the domestic help situation as applicants were practically unobtainable.

The general shortage of farm labour continued in British Columbia. In Kelowna the apple harvest was progressing satisfactorily but about one week behind schedule with an estimated half of the McIntosh crop in. The anticipated shortage of pickers in this area was considerably alleviated by volunteer efforts. A fair crop in the Nelson area was being handled by local orchard workers. An acute shortage of practically every kind of logging camp workers was in evidence generally. Forest fires curtailed logging operations in the Nanaimo and Port Alberni areas and crews were being diverted for fire fighting. Experienced help continued scarce in coal and metal mines. A shortage of muckers hampered production in some areas. One base metal property was reopened and crews increased at another. Good catches of fish were reported and packers were in urgent need of all types of labour. Canneries generally were working at capacity but needed experienced help and few suitable applicants were forthcoming. Sawmills generally reported production curtailed by shortage of logs and by acute scarcity of all classes of labour. One sawmill had been closed in the Nanaimo area and further curtailment was anticipated. Skilled and unskilled shipyard workers were in good demand at Prince Rupert but in Vancouver and Victoria the need was less pronounced. Reorganization had caused some lay-offs in Vancouver but trained heaters and passers were required. Many of the smaller shipyards were in need of boat builders. Trained smeltermen and labourers were re-

quired by Consolidated Mining and Smelting Company, but there were few available. Machinists were in steady demand but qualified men were scarce. There was a plentiful supply of skilled machine operators at Vancouver but plants lacked the necessary equipment to absorb them. A steady demand for fitters and mechanics from aircraft plants and placements were facilitated by relaxed requirements in one plant where women are being increasingly employed. Factories were busy, especially at Vancouver and electricians were required at Victoria. The demand continued heavy for good carpenters and labourers for defence projects and placements were effected but many orders remained unfilled. Some projects were behind schedule due to shortage of labour and materials. There were calls for labourers for the Prince Rupert-Cedarville Highway and for cofferdam construction at Kootenay. Railways were short of labourers and women were being employed as car cleaners. Trade was brisk in all lines. Domestic and restaurant help was in much demand but applicants for this class of work were very scarce.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting August 1, was 13,130, the employees on their payrolls, numbering 1,780,559, compared with 1,759,197, in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for August was 2,243, having an aggregate membership of 375,907 persons, 0·9 per cent of whom were without employment on September 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of August, 1942, as Reported by Employers

Continuing the steadily upward movement generally indicated since the early spring, industrial employment in the Dominion showed further expansion at the beginning of August, when the 13,130 establishments furnishing current statistics on employment and payrolls reported a personnel of 1,780,559 men and women. This was an increase of 21,362 persons, or 1·2 per cent, as compared with their working forces at July 1. The record for the last twenty-one years shows that there has usually, though not invariably, been an acceleration in industrial activity at the beginning of August. The latest increase was smaller than that reported in any of the three preceding months, and was also less than the advance indicated at August 1 in either 1940 or 1941, nevertheless, it exceeded the normal expansion from July 1 to August 1.

In the period since April 1, the co-operating establishments have enlarged their working forces by some 127,900 men and women. Like the latest increase, the gain in the period April 1-August 1 was smaller than that reported in the same months of 1941 or 1940, although it was above the average in the experience of pre-war years. The industrial distribution of the workers recently added to the reported payrolls has differed considerably from the normal. Thus, where the increase in manufacturing between April 1 and August 1 prior to the war, constituted on the average less than 40 per cent of the total, in 1942 some 68 per cent of the greater numbers added to the staffs were reported by factories.

The unadjusted index number of employment, based on the 1926 average as 100, rose from its previous maximum of 175·7 at July 1, to 177·8 at the beginning of August. As compared with August 1, 1941, figure of 160·6, there was a gain of 10·7 per cent. Although this increase is important, it is

smaller than any recently reported in the twelve months' comparison, a tapering in the rate of growth which fulfils expectations.

Since the expansion at the latest date was above normal, the seasonally-adjusted index, like the crude figure, showed a further advance, standing at 173·0 at August 1, as compared with 172·4 at July 1.

Manufacturing establishments continued active, employing an additional 15,000 persons, which brought the number in recorded employment in such plants to a new high of 1,106,282 at August 1. The latest improvement was on a smaller scale than that reported in the preceding month, being also less than at August 1 in 1940 or 1941; however, it considerably exceeds the normal mid-summer advance. As in recently preceding months, the expansion in the production of durable goods was particularly outstanding, some 11,200 persons being added to the payrolls of manufacturers in these industries; the gains in the non-durable goods division amounted to about 3,400 men and women, while central electric stations reported nearly 400 additional employees.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

The trends in the non-manufacturing industries were mixed. Logging, mining and trade showed curtailment; that in mining (which took place chiefly in the gold group) was contra-seasonal, while in the other two industries a falling-off is customary in the summer. On the other hand, communications, transportation, construction and services reported improvement, which approximated, or exceeded the average gain in these divisions at August 1 in the record of twenty-one years.

The salaries and wages disbursed at August 1 by the co-operating employers showed an increase of 1·5 per cent, accompanying that of 1·2 per cent in the number of employees. The latest reported weekly payroll aggregated $50,892,574, a gain of $770,364 over the amounts distributed by the same employers at the beginning of July. The per capita average earnings at August 1 were $28.58, and at July 1, $28.49*.

If the statistics for the finance industries are included in the general totals, the survey shows that the 1,843,766 persons in recorded employment at August 1 then received the sum of $52,810,259 for services rendered in the last week in July. This was a per capita average of $28.64. At July 1, the establishments co-operating in the nine leading industrial groups,—manufacturing, logging, mining, communications, transportation, construction, services, trade and finance,—reported an aggre-

TABLE I—EMPLOYMENT AND EARNINGS

Number of Persons Employed at August 1, 1942, by the Co-operating Establishments and Aggregate and Per Capita Weekly Earnings of such Employees, together with Index Numbers of Employment and Payrolls as at August 1 and July 1, 1942, and August 1, 1941, based on June 1, 1941, as 100 p.c.

*Revised.

gate payroll of $52,024,883*, paid to 1,822,386 men and women. Their average earnings were $28.55*.

A comparison of the course of employment and payrolls in the last twelve months shows that the increase of 10·7 per cent in the number of persons recorded as at work in the eight leading industries has been accompanied by that of 23·2 per cent in their weekly payrolls; in the nine main industrial divisions, including finanace, the gain in employment has amounted to 10·5 per cent, and in payrolls, to 22·7 per cent in the year.

The Course of Wartime Employment

The extent of the seasonal fluctuations in many Canadian industries tends to offset the value of comparisons of employment as at different periods of the year. This seasonal factor still influences to some extent a comparison of the levels presently existing with those at the opening of the war; the present report therefore deals only briefly with the changes in the volume of employment indicated at August 1, 1942, as compared with September 1, 1939.

Employment in the first thirty-five months of the war has showed sustained and impressive expansion; the rare interruptions in the generally upward movement have been almost wholly due to seasonal contractions in the divisions peculiarly subject to such influences. Although these influences have for some months lowered employment in a number of groups in both manufacturing and non-manufacturing classes, the general index has risen by 48·7 per cent between September 1, 1939, and August 1, 1942. The increase in these months greatly exceeds that which took place throughout the period from 1921 to 1939, when the general index rose only by some 28 per cent.

In considering the changes in the industrial pattern of the Dominion resulting from the war, it must be borne in mind that in addition to the extremely large transfers of persons into industrial employment, approximately half a million men have been enrolled in the various services. The accessions to the armed forces and to the number of wage-earners have come mainly from the following sources:—(*a*) the ranks of the unemployed (*b*) the own-account and small-employer classes (*c*) agriculture (*d*) home-makers and other women (*e*) adolescents who under normal conditions would probably continue at school for a year or two longer, or possibly for a lengthier period. At the other

Relative weight of Employment by Provinces and Economic Areas as at August 1, 1942.	100·0	7·2	·1	4·4	2·7	31·4	41·4	10·9	5·1	2·1	3·7	9·1

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

end of the scale, many older men and women are no doubt prolonging their period of service beyond the usual retirement age. The armed services, in addition to drawing upon most of the above reservoirs for recruits, have of course also absorbed very large numbers of persons from their former employment in industry.

For obvious reasons, manufacturing has shown a greater response to wartime demands than any other industrial division. From September 1, 1939, to August 1, 1942, the index number of employment in factories rose by 84·2 per cent, while the general increase in the non-manufacturing groups was 13 per cent.

[1] The relative weight shows the proportion of employees reported in the indicated industry, to the total number of employees reported in Canada by the firms making returns at the date under review.

* Revised as a result of a change in classification.

The durable goods industries have shown an especially noteworthy advance; the index number in this class has risen from 100·4 at September 1, 1939, to 257·1 at August 1, 1942, or by 156·1 per cent. The number of persons employed in the manufacture of "heavy" goods constituted 55 per cent of all those engaged in manufacturing at the date under review, the highest proportion on record; this percentage was decidedly larger than that of 40 per cent reported in the durable goods industries at the outbreak of hostilities.

The non-durable goods class has also shown substantial increases during the period of the war, the index rising by 40·1 per cent, from 126·6 at September 1, 1939, to 177·4 at August 1, 1942. Activity in these industries usually advances as the year progresses, the peak of employment ordinarily being reported at September 1 or October 1. Thus if the seasonal pattern in the early autumn is followed, a greater increase in the current index for the light manufacturing industries over that for September 1, 1939, will be indicated in subsequent reports.

In the non-manufacturing group as a whole, employment, as previously stated, was 13 per cent higher at August 1, 1942, than at September 1, 1939. Normally, employment in construction and certain other classes is lower at the beginning of August than at September 1, so that this percentage of increase, in the ordinary course of events, should continue to rise in succeeding weeks. The following are the percentage gains in the index numbers in the indicated industries in the first thirty-five months of the war; logging, 135·7 per cent, mining, 2·6 per cent, communications, 22·2 per cent, transportation, 22·7 per cent, services, 24·9 per cent and trade, 13 per cent. In construction as a whole, on the other hand, there was a loss of 3·5 per cent. In building, the increase of 104·7 per cent at August 1, 1942, as compared with September 1, 1939, largely resulted from wartime requirements. There was also a gain of 35·4 per cent in this comparison in the staffs of railway construction and maintenance departments, as a result of greater traffic. On the other hand, highway construction showed a considerable decline from September, 1939, the index being lower by 44·4 per cent. The loss was partly seasonal in character, but was also due to the established policy of postponing all but essential work until after the war, while in 1939 a considerable program of road work for the relief of unemployment was in progress.

Statistics of Payrolls

The present tabulation* of statistics of weekly payrolls is the seventeenth in the record, the first material of the kind in the Dominion having been collected with the returns on employment for April 1, 1941. Mainly because the information received in response to the first two inquiries was incomplete, the data for April 1 and May 1, 1941, have been disregarded, so that the record is considered as having commenced with the material for June 1, 1941. The statistics of the present report are preliminary.

The 13,130 firms furnishing information at August 1, 1942, reported the disbursement of $50,892,574 in weekly earnings to the 1,780,559 men and women for whom they provided employment. These firms belong in the following main industrial groups; manufacturing, logging, mining, communications, transportation, construction and maintenance, services and trade. The August 1 payroll total was the highest in the record. The per capita average, at $28.58, was higher by nine cents than that at the beginning of July. The latest average is one cent lower than the maximum figure, recorded at May 1, 1942, when the number of employees reported was considerably less; ordinarily, an increase in the personnel tends to reduce the per capita averages, those newly employed usually being taken on at the lower rates of pay. However, the changes in the industrial composition of the workers included in the surveys have tended; even in this brief period, largely to counteract this tendency. This result is the more remarkable, because the expansion which ordinarily takes place in the summer months would under normal circumstances tend to lower the per capita averages.

In order to have a basis upon which to compare the reported earnings over a lenghtening period, index numbers of weekly payrolls are being currently prepared; these are calculated upon the amounts paid by the co-operating employers on or about June 1, 1941, as 100 per cent. This basic period is obviously not entirely satisfactory, largely because of its brevity; greater experience with the current statistics of earnings may also result in improved methods of handling. Although comparison with information compiled elsewhere in the Bureau provides evidence that the current statistics of payrolls, like those of employment, are thoroughly representative, they must nevertheless in the present stage of their development be regarded as subject to revision.

The following table shows the movements of employment and payrolls in the eight leading industries and in manufacturing as a whole in the Dominion during the period of observation. The index numbers of employment have been converted from their original base, 1926=100, to June 1, 1941, for comparison with the index numbers of payrolls.

* Revised.

INDEX NUMBERS OF EMPLOYMENT AND PAYROLLS, BASED ON JUNE 1, 1941=100, TOGETHER WITH PER CAPITA WEEKLY EARNINGS

	8 Leading Industries			Manufacturing		
	Employment	Aggregate Payrolls	Per Capita Earnings	Employment	Aggregate Payrolls	Per Capita Earnings
			$			$
1941						
June 1	100·0	100·0	25·25	100·0	100·0	25·57

Oct. 1	108·4	113·3	26·37	110·1	115·4	26·80
Nov. 1	109·6	117·3	27·02	111·6	120·4	27·59
Dec. 1	110·4	119·5	27·32	112·1	123·4	28·15
1942						
Jan. 1	108·4	112·3	26·13	111·4	114·6	26·32
Feb. 1	108·2	118·5	27·65	113·8	126·3	28·39
Mar. 1	108·0	119·4	27·92	116·5	130·2	28·58
April 1	108·0	121·6	28·41	118·7	134·3	28·94
May 1	109·5	124·0	28·59	120·4	137·3	29·19
June 1	112·3	125·5	28·20	122·6	137·6	28·73
July 1	114·9	129·7[1]	28·49[1]	124·7	142·0[1]	29·16[1]
Aug. 1	116·3	131·7	28·58	126·4	143·3	29·01

Thus between June 1, 1941, and August 1, 1942, an increase of 16·3 per cent in industrial employment generally has been accompanied by that of 31·7 per cent in the reported payrolls. The reasons previously given for the much greater advance in the index of earnings than in that of employment may again be stated:—(1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average, and in addition, there is in many cases a considerable amount of overtime work, and (2) the extension of the system of paying a cost-of-living allowance to the majority of workers; in some cases, this cost-of-living bonus has been enlarged since its institution. In certain cases, there have also been increases in the wage-rates. The dilution of labour, which has been a factor of growing importance in the situation in recent months, has tended to prevent the average per capita earnings from showing an advance which is in proportion to that shown in the index of aggregate payrolls. Thus the latter has risen by 31·7 per cent, while the index of per capita earnings has advanced by 13·2 per cent since June 1, 1941.

Manufacturing has shown advances in employment and aggregate payrolls which greatly exceed those generally indicated in industry as a whole. Thus, the number employed in factories has risen by 26·4 per cent between June 1, 1941, and August 1, 1942, while the payroll index has gained by 43·3 per cent in the same interval; the index of per capita earnings has risen by 13·5 per cent. The factors mentioned above as influencing the all-industries statistics operate with greater force in the case of manufacturing.

The increases in employment and payrolls in plants turning out durable goods in the last fifteen months have been particularly noteworthy; the former has risen to 139·7, and the comparable payroll figure to 161·4. In the non-durable goods class, the August 1, 1942, index number of employment stood at 114·4 per cent of the June 1, 1941, figure, and that of payrolls, at 124·1.

In considering the marked variations which are found to exist in the average earnings of those employed in the different industrial classes, it must be borne in mind that the sex distribution of the workers in the different classes is an important factor, being also frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or over-time may also influence considerably the reported aggregates and averages.

Employment and Payrolls by Industries

Manufacturing.—The trends of employment and payrolls[1] in manufacturing continued upward at August 1, the increase being the seventh indicated in as many months. Data were received from 7,329 factories employing 1,106,282 persons, who were paid the sum of $32,098,417 in weekly earnings on or about August 1. At July 1, 1942, the co-operating manufacturers had reported a working force of 1,091,283 men and women and an aggregate weekly payroll of $31,819,216[1]. The increase in employees was 14,999, or 1·4 per cent, while that in salaries and wages amounted to $279,201, or 0·9 per cent. The disparity in the percentage gains was due partly to the fact that there were substantial advances in industries in which earnings are frequently below average, while there were also losses in

many cases as a result of holidays. In consequence of these factors, the per capita average declined slightly, falling from $29.16[1] at July 1, to $29.01 at the first of August.

The number of persons engaged in manufacturing operations reached a new all-time high at August 1, when the index stood at 212·4, as compared with 209·5 at the beginning of July, 1942, and 176·8 at August 1 of last year, previously the maximum for that date. The latest increase in employment greatly exceeded the usual seasonal gain at midsummer in the period since 1920, but was smaller than that indicated at August 1 in either 1940 or 1941. The seasonally adjusted index number showed a further advance, rising from its previous high of 205·3 at July 1, to 207·7 at the beginning of August, 1942.

Iron and steel works continued to absorb large numbers of additional workers, although the increase of 8,925 at August 1 was not so great as that noted in the preceding survey. The number of employees reported in these industries (422,155), constituted almost 24 per cent of the total personnel indicated in the eight leading industries, being some 38 per cent of all those on the staffs of the co-operating manufacturers. Employment in shipyards, aircraft and firearm factories continued greatly to increase. The food groups (animal and vegetable), also showed important gains. Non-ferrous metal, lumber, electrical apparatus, beverage and miscellaneous non-metallic mineral plants were busier, although the advances were on a smaller scale than in the foregoing. On the other hand, pulp and paper and textile plants were quieter; the losses in the latter were seasonal.

The following shows the unadjusted index numbers at August 1 in recent years: 1942, 212·4; 1941, 176·8; 1940, 134·4; 1939, 112·8; 1938, 110·0; 1937, 118·1 and 1936, 104·9. The 1926 average is taken as 100 in calculating these indexes.

The manufacturers furnishing statistics for August 1, 1941, had numbered 6,934, and their employees had aggregated 919,000. Since midsummer of last year, there has been an increase of 20·1 per cent in recorded employment in factories, while the rise in the reported payrolls has been 33·6 per cent.

The payroll[1] of $32,098,417 disbursed on or about August 1 for services rendered in manufacturing establishments during the week preceding, represented a pay envelope of $29.01 for the average worker. This per capita figure was lower by 15 cents than that indicated at July 1, 1942, but was higher by $2.95 than the average of $26.06 at August 1, 1941.

[1]Revised.

Based on the weekly salaries and wages paid by the co-operating establishments on or about June 1, 1941, as 100 per cent, the index of payrolls at August 1, 1942, stood at 143·3, as compared with 142·0[1] at July 1, 1942, and 107·3 at August 1, 1941. The increase of 33·6 per cent in the reported payrolls at the date under review as compared with twelve months earlier, considerably exceeds that of 20·1 per cent in the number of persons employed by the co-operating manufacturers. As elsewhere given, the main reasons for this disparity, are, first, the growing concentration of workers in the more highly-paid heavy industries, together with a considerable amount of overtime work for such classes, and secondly, the wider application of the system of meeting the increased cost-of-living by the payment of a bonus under the terms of P.C. 8253 of October 24, 1941. The importance of the first of these factors is emphasized by the fact that the August 1 index number of payrolls in the durable goods group stood at 161·4, or 47·2 per cent higher than at the same date of, 1941, while that in the non-durable goods, at 124·1, showed an incerase of not quite 18 per cent; the index of employment in the heavy industries in the same period has risen by 31 per cent as compared with the gain of just over 9 per cent in that for the light manufacturing industries.

During the period for which statistics of payrolls are available, there have been especially noteworthy increases in the salaries and wages reported in the non-ferrous metal, chemical, iron and steel, miscellaneous manufactured products, electrical apparatus and equipment and beverage industries. These gains have been associated with important advances in employment; in most instances, however, the percentage rise in the latter has been proportionately less than that in the payrolls despite the continued dilution of labour, with the result that the per capita earnings in these industries are higher than they were at the beginning of August, 1941. This statement, indeed, applies to the majority of manufacturing classes.

Logging.—Employment in logging camps declined at the beginning of August; the loss was seasonal in character, but exceeded the average at midsummer in the years since 1920. The 435 reporting firms employed 42,165 workers at August 1; this was 8,222 fewer than in the preceding month. In spite of this reduction, employment was brisker than at the beginning of August in any other year of the record. The index, at 142·1, was seven per cent higher than at the same date in 1941; this increase accompanied that of 23·5 per cent in the reported weekly payrolls.

These totalled $968,955 at August 1, as compared with $1,091,680 at the beginning of July.

The per capita average earnings at the latest date were $22.98, as compared with $21.67 paid on or about July 1. In considering these figures of aggregate and average earnings, it must be recalled that they do not include the value of board and logging, frequently a part of the remuneration of workers engaged in bush operations.

Mining.—The persons on the payrolls of the 432 co-operating mine operators at August 1 numbered 80,518; this was a decline of 842 from their forces at the first of July. There was a considerable contraction in activity at the date under review in metallic ore mining, chiefly in gold mining. Coal mining was also quieter. The extraction of other non-metallic minerals, however, afforded more employment. The index at the beginning of August stood at 172·3; as compared with 178·1 at midsummer of last year, there was a falling-off of 3·3 per cent.

The payrolls reported at the latest date amounted to $2,782,149, or $80,641 more than the weekly total indicated at July 1. This was an increase of three per cent, as compared with the reduction of one per cent in the number of employees. As a result of this difference in trends, the per capita average earnings rose from $33.20 at July 1, to $34.55 at the beginning of August. The payrolls in the preceding period of observation had been considerably lowered by the temporary suspension of operations in certain coal mines in Nova Scotia. The latest aggregate accordingly approximates more closely to the June 1 figure than to that for July 1.

Communications.—Further gains in employment were recorded in communications at August 1. The increase was seasonal, but was slightly smaller than usual for the time of year. Telegraphs and telephones both reported larger working forces. The employees of the co-operating communication companies numbered 28,512, and their weekly payrolls amounted to $785,657. In the preceding report, the number of persons engaged in the communications division was given as 28,225, earning $785,141. There was thus an increase of one per cent in employment, and of 0·1 per cent in payrolls. As a result of this difference in the proportions, the per capita average declined from $27.82 at July 1, to $27.56 at the first of August. Based on the 1926 average as 100, the latest index of employment was 106·7; this was five per cent higher than at August 1, 1941. The index number of payrolls in the twelve months has risen by 9·2 per cent.

Transportation.—Activity continued to increase in the transportation division, improvement being indicated in local and steam railway transportation and in shipping and stevedoring. On the whole, the gain was rather above normal; it also exceeded that noted at August 1, 1941. The index then stood at 105·0, as compared with that of 110·4 at the date under review. The working forces of the 562 employers and branches co-operating in the latest survey aggregated 139,151; at July 1, they had employed 136,170 men and women. The reported payrolls rose from $4,684,233* at July 1, to $4,784,308 at the first of August. This was a gain of 2·1 per cent, while that in employment was 2·2 per cent. The per capita earnings stood at $34.38 at August 1, as compared with $34.40* at the beginning of July. In the period of observation, the index of aggregate payrolls in the transportation industries has risen by 20·9 per cent, accompanying a gain of 11·3 per cent in the index number of employment in the same period.

Construction and Maintenance.—The seasonal expansion in construction and maintenance was rather greater than usual at midsummer. The largest gains were in building, but highway and railway work also afforded more employment. Information was received from 1,496 contractors with a combined staff of 185,136, as compared with 173,738 at July 1. This increase of 11,398 persons, or 6·6 per cent, accompanied that of 9·6 per cent in the reported weekly payrolls, which amounted to $4,947,731 at August 1. The per capita average earnings rose from $25.99 paid at July 1, to $26.72 at the date under review.

Activity in construction continued at a lower level than in the same period of last year; the latest index was 146·8, while that at August 1, 1941, had been 160·7. There was a decrease of 8·6 per cent in employment over the twelve months, in which period the index of payrolls rose by eight per cent.

Services.—The service industries showed a seasonal increase at the date under review which exceeded the average at August 1 in the experience of other years of the record. The index number, at 189·4, was over five points higher than at the beginning of August a year ago. Data were tabulated from 617 establishments, whose employees aggregated 42,197, as compared with 41,179 at July 1. This was a gain of 2·5 per cent; the reported payrolls rose from $711,365 at the beginning of July, to $728,511 at August 1, or by 2·4 per cent.

The payroll index was 13·7 per cent higher at the latest date than at the same date of last summer, an increase which was accom-

panied by that of 2·9 per cent in the index of employment. The per capita average earnings, at $17.26 at the beginning of August, were lower by one cent than at July 1. At August 1, 1941, the average was $15.64. In this industry, as in logging, attention must be drawn to the fact that many of those employed in hotels and restaurants receive board and lodging as part of their remuneration; the latter constituted some 60 per cent of the total reported in the service division as a whole at the beginning of August.

Trade.—There was a seasonal slackening in employment in trading establishments at August 1; the loss, following a contra-seasonal decline at July 1, was less than average for midsummer in the experience of the years since 1920. A personnel of 156,598 was reported by the 2,199 co-operating firms, who had employed 156,855 men and women at the beginning of July. The payrolls disbursed by these employers fell from $3,813,969 at that date, to $3,796,846 at August 1, or by 0·4 per cent. Since the number of workers had declined to a lesser extent (by 0·2 per cent), the per capita average, at $24.25 at the latest date, was rather lower than that of $24.32 at July 1.

The latest index number of employment in trade was 152·5 per cent of the 1926 base; this was lower by 2·7 per cent than that indicated at the date in 1941, but there was an increase of 2·6 per cent in the year in the index of payrolls.

Financial Institutions.—Statistics were tabulated from 757 banks, trust companies, insurance companies and other financial institutions, whose staffs aggregated 63,207, an increase of 18 as compared with July 1. The salaries and wages paid these employees amounted to $1,917,685, giving a per capita weekly average of $30.34, as compared with $30.11 in the last report.

Employment and Payrolls by Economic Areas

The movement was upward in all except the Maritime Provinces, where there was a seasonal decline which exceeded the average at August 1 in the experience of other years of the record. The largest increases in personnel at the date under review were in Quebec and British Columbia, in both of which they were above normal. In Nova Scotia, the weekly salaries and wages disbursed at August 1 were higher than at July 1, despite the loss in employment. In Quebec, the percentage gain in the payrolls exceeded that in the number of employees, in the Prairie Provinces the reverse was the case, while in Ontario there was a slight falling-off in the payrolls, largely as a result of holidays.

Employment and payrolls in all provinces were considerably greater at the date under review than at the beginning of August, 1941. The level of employment in all provinces except the Maritimes was also higher than in any other month of the record; in the Maritimes, the latest indexes were lower than at July 1, 1942.

Maritime Provinces.—The 941 employers furnishing data in the Maritime Provinces employed 127,640 men and women at the first of August, as compared with 132,723 in their last report. This decrease of 5,083 persons, or 3·8 per cent was seasonal, but greatly exceeded the average loss at midsummer in the years since 1920. The index of employment, at 170·4, was 6·8 points lower than at the beginning of July, but was higher by 3·8 per cent then at August 1, 1941. There was considerable curtailment at the date under review in Prince Edward Island, Nova Scotia and New Brunswick. Most of the decline took place in logging and construction, and was possibly due in part to the demand for harvest help.

The weekly earnings reported at August 1 amounted to $3,262,164; this was 0·3 per cent higher than those disbursed by the same firms at July 1. The increase in payrolls, accompanying a substantial decline in employment, resulted in a considerably higher per capita weekly average, which stood at $25.50 at August 1, as compared with $24.50 paid on or about July 1. The gain took place largely in coal mining, in which a temporary suspension of certain operations had reduced the weekly payments at July 1. On the other hand, the payrolls in manufacturing were lower at August 1 then in the preceding report, when there had been a greater amount of overtime work in the iron and steel group. In the last twelve months, the index of payrolls in the Maritime Provinces has risen by 19·6 per cent, while that of employment has increased by 3·8 per cent.

Logging and construction reported considerably lowered activity at August 1, when there were smaller declines in mining, transportation and trade. Manufacturing, on the other hand, showed further improvement; there were also moderate gains in hotels and restaurants. Within the manufacturing industries, the greatest advances took place in iron and steel and lumber mills, in which they were smaller than those recently reported in the same industries. Pulp and paper factories were slacker.

For August 1, 1941, statistics were tabulated from 894 employers with 122,789 persons on

* Revised.

their payrolls, a contra-seasonal increase of 120 as compared with their employees at July 1 of last summer.

Quebec.—There was further important expansion in Quebec, the 3,329 co-operating establishments reporting a personnel of 559,733 men and women. This was an increase of 12,750 persons, or 2·3 per cent over the preceding month, greatly exceeding the average at August 1 in the earlier years of the record, although it was smaller than that indicated at midsummer of 1941. The weekly payrolls disbursed at August 1 were reported as $15,136,470, being four per cent higher than at July 1. The latter gain was due in part to the fact that the fairly widespread observance of the St. Jean Baptiste holiday in the latter part of June had in many cases reduced the per capita average earnings paid at July 1. The general average then reported had been $26.62; that at the beginning of August was $27.04. This is the highest in the record of 15 months. The latest index number of employment established a new maximum, at 191·4, it was 14·2 per cent above that at the same date of last summer. The increase in the reported payrolls in the 12 months was 30·3 per cent.

Construction showed the greatest advance at the date under review, the firms reporting in that industry enlarging their working forces by 7,580 persons. In manufacturing, there was a gain of 5,400 men and women, most of whom were taken on in the iron and steel and vegetable food groups. Smaller increases were indicated in leather, chemical, electrical apparatus and non-ferrous metal plants, while lumber and textile mills were quieter. Logging and mining also released employees; on the other hand, employment in transportation, services and trade increased.

At August 1, 1941, 3,150 establishments had reported a personnel of 488,670 men and women; as compared with 471,518 at July 1, this was an increase of 3·6 per cent.

Ontario.—The tendency was again upward in Ontario, although the increase was decidedly smaller than that indicated in any immediately preceding month. It was, however, contra-seasonal in character. Information was received from 5,657 firms having 736,666 employees, or 1,295 more than at the beginning of July, 1942. This increase of 0·2 per cent was, however, accompanied by a small fractional decline in the earnings of those in recorded employment; the August 1 payrolls were given as $21,911,947, compared with $22,028,714 paid at July 1. The decrease was due to holidays, together with short time work in a number of industries. The average at the latest date was $29.74, as compared with $29.96 at July 1, 1942, and $27.16 at the beginning of August, 1941. The index of employment stood at 181·5 at August 1, the highest in the record; it was fractionally above the July figure of 181·1, being 9·1 per cent above that at August 1, 1941. The index of earnings was 19·4 per cent higher than a year ago.

Additions to the working forces were reported at the beginning of August in manufacturing; iron and steel and lumber plants showed considerable gains, and animal food, beverage and non-ferrous metal factories were also busier. On the other hand, vegetable food, pulp and paper, chemical and electrical apparatus works were quieter. Logging, mining and trade also released employees, while improvement was indicated in transportation, services and construction . The gain in the last-named was largest.

At August 1, 1941, 5,439 firms had furnished data, showing a personnel of 674,433 men and women, as compared with 670,477 in the preceding month.

Prairie Provinces.—Employment in Manitoba, Saskatchewan and Alberta advanced at August 1, when the weekly payroll was also higher. Statistics were tabulated from 1,815 firms whose employees numbered 194,142, as compared with 188,597 at July 1. The weekly salaries and wages disbursed at the beginning of August amounted to $5,522,646, while those reported at July 1 had aggregated $5,389,799. The increase in employees was 2·9 per cent, and in payrolls, 2·5 per cent. Such a disparity in the rates of gain is commonly indicated, those newly-added to the staffs usually being taken on at the lower rates of pay. The per capita average at August 1 was $28.45, and at July 1, $28.58.

A comparison of the statistics with those for August 1, 1941, shows that there has been an increase of 5·8 per cent in the number of persons in recorded employment in the twelve months, accompanied by that of 14·1 per cent in the index of aggregate weekly earnings.

Construction, transportation, manufacturing, mining, communications and services reported considerable advances in employment, together with the distribution of higher payrolls, except in communications, in which the indicated earnings were lower. In logging, on the other hand, employment continued seasonally quiet.

The 1,773 establishments whose data were tabulated at August 1, 1941, had employed 183,498 persons, as compared with 179,410 at July 1, 1941.

British Columbia.—Further pronounced expansion in employment and payrolls was noted in British Columbia, where the 1,384 firms

furnishing information had a combined working force of 162,378 men and women at August 1; their earnings in the last week in July amounted to $5,059,347. At July 1, those employers had reported a staff of 155,523 persons, earning $4,893,416 in the week preceding. The latest index of employment, at 175·3, was the highest in the record, exceeding that of 146·6 at August 1, 1941, by 19·6 per cent. The index of payrolls in the twelve months showed an advance of 35·4 per cent.

The greatest gains at the date under review were in manufacturing, notably in iron and steel and vegetable food factories. There were also increases in employment on a smaller scale in the animal food, pulp and paper and non-ferrous metal groups, while lumber mills were quieter, partly owing to the shortage of labour. Among the non-manufacturing industries, construction and transportation reported considerable increases, and smaller gains took place in communications, services and trade. On the other hand, logging and mining were slacker.

At August 1, 1941, 1,319 firms had reported a combined working force of 135,457 persons, 6,771 more than in the preceding survey. The per capita weekly average earnings of such employees had been $27.49, as compared with the latest average of $31.16, which was 30 cents lower than the average of $31.46 paid at July 1, 1942.

Employment and Payrolls by Cities

Employment advanced in six of the eight main industrial centres for which statistics are currently tabulated; there were gains in Montreal, Quebec City, Ottawa, Windsor, Winnipeg and Vancouver, while the trend in Toronto and Hamilton was downward. The greatest increases in the personnel were reported in Montreal and Vancouver.

The amounts distributed in weekly earnings at August 1 were lower than at July 1 in Toronto and Windsor, but in the remaining six cities the reported salaries and wages were higher. In Montreal, Quebec City and Winnipeg, the advances in the payrolls were proportionately greater than those in the number of employees, so that the per capita weekly average earnings in those cities also rose; in Hamilton, the moderate decline in employment was accompanied by a slight gain in the salaries and wages disbursed, with the result that the per capita figure in that city was also higher. In Toronto and Windsor, the falling-off in payrolls was partly due to holidays. In Ottawa and Vancouver, the percentage gains in employment exceeded those in the wages paid, as is frequently the case, those newly added to the payrolls usually being paid less than more experienced workers. As a result of these factors, the average per capita earnings in the four centres last-named were lower at August 1 than at the beginning of July.

Montreal.—For the sixth consecutive month, heightened activity was indicated in Montreal. Most of the improvement was in manufacturing, particularly of iron and steel products, and in transportation and construction. Trade also showed a minor gain, while hotels and restaurants released some employees.

The 1,935 firms furnishing data reported 260,890 employees at August 1, as compared with 255,312 at the beginning of July. This advance of 2·2 per cent greatly exceeded that noted at August 1, 1941; it was contra-seasonal, according to the experience of the years since 1920. The salaries and wages paid the men and women in recorded employment at August 1 amounted to $7,338,254; this was higher by 3·2 per cent than the payrolls disbursed by the same firms on or about July 1.

Where the index of employment has increased by 15·8 per cent since August 1, 1941, that of payrolls has risen by 29·7 per cent in the twelve months. The per capita average earnings rose from $27.84 at July 1, to $28.13 at August 1, 1942, as compared with $25.07 at August 1, 1941.

The 1,828 firms reporting at the beginning of August of last summer had employed 224,990 persons; the index was then much lower, having been 148·5, as compared with 171·9 at the date under review, the peak figure in the record.

In *Quebec City,* an increase of 1,079, or 3·4 per cent in the employees of the co-operating establishments brought them to 32,648 at August 1. There was a relatively larger advance in the payrolls distributed to these workers; the observance of the St. Jean Baptiste holiday had lowered the earnings at the beginning of July, so that the latest gain to some extent indicates recovery from the lower than usual totals then reported. The wages and salaries paid at August 1 amounted to $779,035, as compared with $700,788 in the preceding survey. The per capita weekly average rose from $22.20 at July 1, to $23.86 at August 1, the highest to date.

The improvement in employment at the beginning of August took place largely in manufacturing, mainly in iron and steel, chemical, textile and leather plants. The general changes in the non-manufacturing classes were small.

The 218 firms furnishing statistics for August 1, 1941, had reported a combined working force of 24,835. The latest index of

employment, at 228·8, (the highest in the record), was 27·7 per cent above that at August 1, 1941, while there was an increase of 49·7 per cent in the index of payrolls in the 12 months.

Toronto.—An aggregate working force of 232,317 men and women was reported by the 1,978 firms furnishing data in Toronto; this was a decline of 1,936 from their personnel at July 1. The reduction is the first indicated in fifteen months, with the exception of that at January 1. The slackening took place largely in manufacturing, and within that group, mainly in food, textile, chemical and iron and steel plants. Trade and services also showed contractions, that in the latter being fairly large. Non-ferrous metal factories, however, were rather busier, and there were small gains in transportation and construction.

The amounts distributed in weekly salaries and wages by the co-operating establishments on or about August 1, were reported as $6,832,790, as compared with $6,942,477 at the beginning of July, 1942. The index of employment at the latest date, at 180·8, was slightly lower than that of 181·7 in the preceding month, but was otherwise the highest in the record, exceeding the August 1, 1941, figure by 15·4 per cent. The accompanying gain in the index of payrolls was 27·2 per cent.

The latest average of per capita earnings was $29.41, as compared with an average of $29.64 at July 1, 1942, while that indicated at August 1, 1941, had been $26.75. The number of persons then employed by the 1,886 co-operating establishments was 200,750.

Ottawa.—Data received from 249 industrial establishments in Ottawa showed a combined staff of 21,475 persons, as compared with 21,122 at July 1. This was an increase of 1·7 per cent, which was accompanied by that of 1·5 per cent in the reported payrolls. These were given as $546,332 at the beginning of August, as compared with $538,183 of July 1. The gain in employment at the date under review took place mainly in manufacturing, in which there was general improvement, that in lumber mills being greatest. Construction was rather slacker, while little general change was noted in other industries.

The latest index of employment in Ottawa was 163·0, as compared with 157·0 at August 1, 1941. There was thus an increase of 3·8 per cent in this comparison, while the index of payrolls has risen by 13·4 per cent in the 12 months. The 240 establishments furnishing information at August 1, 1941, had employed 20,677 persons.

Hamilton.—There was a slackening in employment in Hamilton at the beginning of August, when the 347 firms making returns reported 61,426 employees, as compared with 61,657 at July 1. The weekly earnings paid on or about August 1 amounted to $1,946,954, while those on the staffs of the same employer at July 1 had been paid the sum of $1,944,833*. Thus a decline of 0·4 per cent in employment was accompanied by a gain of 0·1 per cent in the reported payrolls. The observance of the Dominion Day holiday had in many cases affected the wage disbursements reported in the preceding survey.

Employment in manufacturing was quieter at August 1, there being moderate curtailment in food and iron and steel factories, while electrical apparatus plants reported improvement. Rather small gains were made in construction and transportation, but trade was not quite so active.

At the first of August of last summer, 339 employers had furnished information showing a combined working force of 54,986 men and women. In the 12 months, there has been an increase of 13·4 per cent in the index of employment, accompanied by a rise of 29 per cent in the index of aggregate salaries and wages. The latest index of employment, (viz. 188·1), is the highest in the record, except for that of 188·8 at July 1, 1942.

Windsor.—Contra-seasonal expansion was again indicated in Windsor at August 1, 207 establishments reporting a personnel of 40,245, as compared with 39,028 at July 1. As a result of holidays, however, the weekly payrolls at the latest date (viz. $1,519,757) were lower than in the last report, when the total had been given as $1,547,214.* The latest per capita average was $37.76, as compared with that of $39.64 paid to the typical individual in recorded employment at July 1. The increase in employment at the beginning of August was mainly in iron and steel plants, other industries showing little general change.

The 197 firms reporting at August 1, 1941, had had a working force of 31,393 persons. The latest index, at 296·1 (the highest in the record), was 29·1 per cent above that at the beginning of August, 1941, while the index number of payrolls has advanced by 27·8 in the year. As already stated, the latest total was reduced by the observance of holidays in the period for which information was furnished, a factor which did not so greatly affect the data reported at August 1, 1941.

Winnipeg.—There was a moderate gain in industrial activity in Winnipeg, chiefly in manufacturing and construction, while transportation and trade released some employees. Within the manufacturing division, food and iron and steel reported improvement. Print-

*Revised.

ing and publishing and leather manufacturing, however, were quieter. A staff of 55,648 men and women was employed by the 560 firms furnishing data. At July 1, these establishments had employed 55,419 persons. There was an increase of 0·4 per cent in employment, while that in the weekly wage disbursements was 0·9 per cent; the sum of $1,503,544 was reported as having been paid at August 1, compared with the July 1 of $1,489,780. The per capita average rose from $26.88 at July 1, to $27.02 at the beginning of August.

The latest index number of employment was 135·5, the maximum to date; it was 3·8 above the August 1, 1941, figure of 128·6. The increase in the index of payrolls over the twelve months has amounted to ten per cent. The 553 employers whose statistics had been tabulated at August 1, 1941, had reported 53,612 men and women on their payrolls. The per capita weekly average earnings had then been given as $25.49.

Vancouver.—Further important expansion was indicated in Vancouver at August 1, 1942, this being the nineteenth consecutive increase reported in industrial employment in that city. Statistics were received from 606 establishments, with a staff of 78,543. At July 1, these firms had employed 74,250 men and women. There was accordingly an increase of 5·8 per cent. The index number, at 221·8, established a new high at the beginning of August, being 42½ per cent higher than at August 1, 1941. In this period of 12 months, the index of payrolls has risen by 64·5 per cent. The salaries and wages distributed at July 1 amounted to $2,398,783; this was 4·6 per cent above the figure of $2,293,495* reported by the same firms at July 1, 1942. Since the gain in the payrolls was proportionally smaller than that in employment, the per capita average earnings at August 1 were rather lower, standing at $30.54, as compared with $30.89 at July 1. The average at August 1, 1941, had been $26.56.

The greatest increase in the personnel at the beginning of August again took place in iron and steel manufacturing. Transportation and construction also afforded more employment; the gain in the last-named was considerable.

At August 1, 1941, the persons employed by the 580 co-operating firms had numbered 54,847. The index number had then stood at 155·6, many points lower than the latest figure of 221·8.

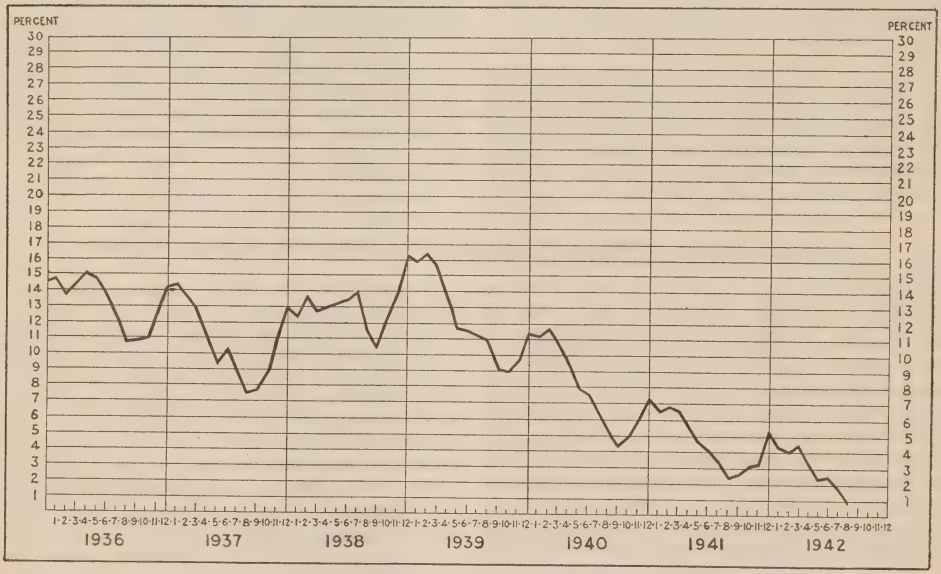
* Revised.

Unemployment in Trade Unions at the close of August, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Reports were received at the close of August from 2,243 labour organizations having an aggregate membership of 375,907 persons, of whom 3,436, or a percentage of 0·9, were reported as unemployed in comparison with 1·8 per cent in July and 2·4 per cent in August, 1941. The substantially higher employment level in August was due principally to the re-employment of garment workers, owing to the re-opening of the season. There was a continued expansion for iron and steel union members and improvement was reflected among workers in the building and construction trades. The percentage of unemployment among trade union members at the end of August, was the lowest for any month in these records, which were placed first on a monthly basis in January, 1919, Previous to that date, the trade union report was published quarterly.

Table I shows the unemployment percentages in trade unions by provinces. It will be observed that these ranged from 0·2 per cent in British Columbia to 2·3 per cent in New Brunswick. There was less than one per cent of union members reported as unemployed in Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia. In comparison with the preceding month, employment in Quebec attained a much higher level; this was due principally, to the seasonal revival for garment workers. Slight employment increases were noted in Nova Scotia, Ontario, Manitoba, Alberta and British Columbia. In Saskatchewan the unemployment percentage remained unchanged. On the other hand, a fair decrease in work was noted in New Brunswick, as unemployment in that province increased from 1·0 to 2·3 per cent. In comparison with the situation at the close of August, 1941, Quebec members were much better employed; the percentage of those without work declining from 3·7 to 1·4, in the month under review. Moderate employment advances were observed in Nova Scotia, Saskatchewan, Alberta and British Columbia, while in Ontario and Manitoba there were minor employment increases. On the contrary, in New



Brunswick there was a fractional employment decline; the unemployment percentage in that province increased from 1·7 to 2·3.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of those without work, ranged from 0·2 in Vancouver to 1·9 in Winnipeg. Unemployment percentages of less than one per cent were indicated in Vancouver, Halifax, Saint John, Toronto and Regina. In comparison with the preceding month union members in Montreal were much busier, the percentage of unemployment declining from 5·0 to 1·1 per cent. The re-opening of the season for garment workers was the main factor in this noteworthy improvement. A moderate employment increase took place in Halifax and there were fractional advances in work in Saint John, Toronto, Winnipeg, Regina, Edmonton and Vancouver. In comparison with returns received in August, 1941, Halifax unions indicated noteworthy employment expansion, the percentage of those without work declining from 4·7 to 0·5. Appreciable improvement was observed, likewise in Saint John, the percentage standing at 0·3, compared with 2·3 a year ago. In Montreal, Toronto and Vancouver there were more moderate employment increases; fractional advances only were reflected in Winnipeg, Regina and Edmonton.

The accompanying chart illustrates the trend of unemployment from January, 1936 to date. The curve in August, 1942, rested at a considerably lower level than in the preceding month, thus reflecting a noteworthy employment expansion. The point of the curve was distinctly lower than in August, a year ago, thus indicating a marked employment increase.

For the manufacturing industries, 748 reports were tabulated. The total membership was 200,921 persons, of whom, 930, or a percentage of 0·5 were without work, in comparison with percentages of 2·1 in July and 1·4 in August, a year ago. In comparison with the situation in July, garment workers indicated a pronounced employment expansion, due to the reopening of the season. The percentage of unemployment among these workers declined from 10·5 to 0·1. The percentage of those without work among leather workers stood at 3·4 which was a substantial improvement over the preceding month. Fractional unemployment was observed among workers in the iron and steel trades and among fur workers; employment for both of these memberships advanced to considerably higher levels. Among printing tradesmen the unemployment percentage declined slightly from 1·6 to 1·4. Among papermakers, and metal polishers etc., there were slight employment advances; very little unemployment was reported among these members. The same fractional percentage of members without work as that shown in July, was observed among clay, glass and stone and wood-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

workers. Unions in which the members, as in the previous month, were reported as fully engaged, were soft drink, cigar, rubber, jewellery, aluminum, gas workers and butchers, meat and fish packers. On the other hand, although the unemployment percentages were less than one per cent in each case, fractional employment recessions were reflected among bakers and confectioners, electric current employees, textile and carpet and hat, cap and glove workers. The percentage of those without work among miscellaneous manufacturing workers was 110. compared with 9·6 per cent in July. In comparison with conditions in August, a year ago, noteworthy expansion was indicated for leather workers and substantially higher employment levels were attained by members in the iron and steel and printing trades. Butchers, meat and fish packers were fully employed, compared with a percentage of 2·8 without work a year ago. On the other hand, there were fractional declines among hat, cap and glove and fur workers.

For coal miners, returns were tabulated from 55 unions, having a total membership of 19,708 persons. As in July, there was no unemployment. In August, 1941, 2·4 per cent of these members were without work. British Columbia members were fully employed as compared with the 13·3 per cent out of work in August, 1941. Nova Scotia and Alberta members likewise were fully engaged as compared with 0·7 and 1·9 per cent respectively, without work, in August, a year ago. New Brunswick members were fully employed at both dates.

In the non-metallic minerals group returns were tabulated from 8 unions, having a total membership of 4,198 persons, of whom 187, or a percentage of 4·5 were unemployed, in comparison with percentages of 2·9 in July and 15·3 in August, a year ago.

Unions in the building and construction trades returned 222 reports having an aggregate membership of 32,707 persons, of whom 1,068, or a percentage of 3·3 were without work, in comparison with 4·2 per cent in July and 6·9 per cent in August, 1941. Among painters, decorators and paperhangers, electrical workers and plumbers and steamfitters, employment levels were moderately higher; fractional unemployment, only, prevailed in these trades. Bricklayers, masons and plasterers, and granite and stonecutters, also, with percentages of 8·4 and 6·8, respectively, reported fair employment expansion, while the unemployment percentage for hod carriers stood at 5·4, in comparison with 5·8 per cent in July. Among the smaller memberships, in which the changes did not involve very many members, steam shovel men, bridge and structural iron workers and lathers reflected noteworthy expansion. The percentage of unemployment among carpenters and joiners, which stood at 2·9, remained unchanged. In comparison with conditions in August, a year ago, a much higher employment level prevailed among carpenters and joiners. Although the membership is comparatively small and consequently not many members were involved, granite and stonecutters registered marked improvement; the percentage of those without work in these trades stood at 6·8, compared with 31·0 per cent, a year ago. Much higher employment levels prevailed, likewise, for steam shovel men, bridge and structural iron workers, painters, decorators and paperhangers, and plumbers and steamfitters.

In the transportation industries there were 892 returns tabulated. These organizations reported a total membership of 79,488 persons, of whom 958, or a percentage of 1·2 were without work, in comparison with percentages of 1·1 in July and 1·8 per cent in

August, a year ago. Employment for steam railway employees, whose returns constituted over 79 per cent of the entire group membership, showed a fractional increase. The unemployment percentage of 1·2 for these workers remained very low, thus reflecting a very high employment level. Among street and electric railway employees conditions were fractionally better. There was little or no unemployment reported among these workers, while teamsters and chauffeurs were fully employed at both dates. An appreciable reduction in work was in evidence among navigation workers, the percentage of unemployment increasing from 3·0 to 8·8. In compari son with conditions in August, a year ago, navigation workers disclosed noteworthy employment expansion; there was 13·2 per cent of these workers unemployed in August, 1941. Among steam railway employees and teamsters and chauffeurs there were slightly higher employment levels. The fractional unemployment percentage of ·0 shown among street and electric railway employees remained unchanged.

From unions in the wholesale and retail trade 9 reports were tabulated with a total membership of 2,464 persons. These were fully employed, as in the previous month and in August, a year ago.

From civic employees returns were tabulated from 102 unions with 9,752 members, all of whom were fully engaged, in comparison with percentages of ·0 in July and 0·1 in August, a year ago.

In the miscellaneous group of occupations there were 146 reports received, having a combined membership of 11,904 persons. Of these, 97, or a percentage of 0·8 were unemployed, in comparison with percentages of ·07 in July and 2·0 in August, 1941. Unclassified workers, whose membership was fully engaged in the previous month, showed 1·0 per cent of unemployment; among stationary engineers and firemen and theatre and stage employees, there were fractional employment increases; on the other hand, hotel and restaurant employees and barbers reported very slight recessions. Among hotel and restaurant employees, barbers and stationary engineers and firemen, the percentages of unemployment were fractional, only. In comparison with conditions in August, a year ago, hotel and restaurant employees and stationary engineers and firemen reflected much higher employment levels, while theatre and stage employees indicated moderate improvement. The percentage of 0·3 among barbers remained unchanged; unclassified workers recorded a fractional decline in work.

Returns from 5 unions of fishermen were tabulated. The combined membership was 2,637, of whom, 10, or a percentage of 0·4 were without work. This percentage was identical with that shown in the preceding month. The percentage of unemployment in August, 1941, was 1·5.

There were reports received from 2 unions of lumber workers, whose total membership was 2,851. As in the preceding month, there was no unemployment. In August, a year ago, the percentage of those without work stood at 0·6.

Table I shows by provinces the average percentage of union members, who were unemployed each year from 1931 to 1941, inclusive, and also the percentage of unemployment for August of each year from 1931 to 1940, inclusive, and for each month from August, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in Table I.

Building Permits Issued in Canada During August, 1942

The August report of building permits compiled by the Dominion Bureau of Statistics includes returns from 178 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 161 reported detailed operations. The remaining 17 advised that no permits had been issued during the month of August while 26 municipalities had failed to report at the close of September 12.

The total value of permits reported as issued in the month of August is $8,159,508. Revised values for the month of July include returns from 201 municipalities and aggregate $10,-676,743. Reports were received from 52 of the 58 original municipalities and show a value of $6,077,182 for August. The corresponding revised value for July includes 58 returns and is $7,734,966 while the August, 1941, value was $9,620,358.

The total value of permits issued by all municipalities during the eight elapsed months of the current year is $70,072,454. The value of the 58 municipalities for the same period is $50,748,817, while their corresponding value in 1941 was $67,692,157.

During the month of August new construction of all types amounted to 73.4 per cent of the total value, while the percentage of new residential construction was 47·1.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, August, 1942, summarizes the June-July employment situation in Great Britain as follows:

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at July 13, 1942 (exclusive of 24,071 men who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 66,116; those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 1,728; and those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 2,180. As compared with June 15 the numbers wholly unemployed showed an increase of 3,350, those temporarily suspended from work a decrease of 133, and unemployed casual workers a decrease of 822.

The corresponding figures for women and girls at July 13, were 35,320 wholly unemployed (exclusive of those, numbering 1,238, who had been classified by interviewing panels as unsuitable for normal full-time employment), 1,536 temporarily stopped, and 125 unemployed casual workers. Of the 35,320 wholly unemployed, 1,269 had been classified as unable for good cause to transfer to another area. As compared with June 15, the numbers wholly unemployed showed a decrease of 1,154, those temporarily stopped showed a decrease of 273, and unemployed casual workers showed a decrease of 133.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for July 13 was 70,342, as compared with 71,793 at June 15 and with 174,780 at July 14, 1941.

United States

Employment in the United States in non-agricultural establishments exceeded all previous levels according to the official report issued by the United States Secretary of Labour. The August total of 37,789,000 employed persons was 555,000 greater than in July of this year and 2,332,000 above the August, 1941, level.

Employment gains were reported in manufacturing, Federal, State, and local government services, building construction, and transportation and public utilities. These increases were slightly offset by employment declines in trade, mining, and finance and service.

The rise of 337,000 in factory employment continued the virtually unbroken succession of increases reported since June 1940 and brought to nearly 4,700,000 the number of workers added to factory employment since the beginning of the Defence Program. Employment in the Federal, State, and local government services increased by 205,000 over the previous month. Most of this increase occurred in the War Department. An additional 23,000 workers were hired in August on construction work. In the transportation and public utility groups, employment increased by 14,000.

The decline of 13,000 in the wholesale and retail trade group continued the series of monthly decreases which began in April. Government restrictions affecting certain lines of trade contributed to the decline. In the mining group, losses in employment in each major line of mining activity resulted in a net decline of 5,000 workers. The largest decline (1·2 per cent) was in metal mining and was attributable to reduced forces in copper, lead, zinc, gold, and silver mines. Employment in the finance, service, and miscellaneous group was 6,000 lower than in July.

The increase of 1,641,000 in factory employment over the year interval accounted for a major portion of the gain of more than 2,300,000 in non-agricultural establishments. Employment in the Federal, State, and local government services was 1,000,000 greater than in August 1941. Smaller gains were shown in the transportation and public utility, and the finance, service, and miscellaneous groups. Among the three major groups reporting fewer workers in August 1942 than in August 1941, the decline in trade employment was most outstanding (406,000). The losses in mining and contract construction amounted to 61,000 and 42,000, respectively.

The increases in the durable goods manufacturing group of 2·6 per cent in employment and 5·8 per cent in weekly pay rolls were due primarily to expansion in industries geared to the war effort, notably shipbuilding, aircraft, radios, instruments, engines, automobiles, brass, bronze, and copper products, electrical machinery, ammunition, explosives, and machine tools. The increase in employment of 3·7 per cent or 14,500 workers in the automobile industry was the fourth successive gain, indicating the accelerated production of war materials.

In the non-durable goods group the increase in employment of 1·6 per cent was due chiefly to seasonal gains in canning and preserving (18·9 per cent or 34,000 workers), women's clothing (9·8 per cent or 17,700 workers), men's clothing (3·1 per cent or 6,300 workers), millinery (32·2 per cent or 5,400 workers), and confectionery (10·1 per cent or 5,300 workers). The beverage industry showed an increase of 3·8 per cent or 3,400 workers and the rubber tire and tube industry a further gain of 4·5 per cent or 2,800 wage-earners. The increase in the latter industry is the fourth consecutive monthly rise and reflects production on Government orders.

Among industries reporting employment declines due primarily to material shortages and freeze orders were cast-iron pipe, plumber's supplies, stoves, business machines, fur-felt hats, and silk and rayon goods.

The August over-all factory employment and pay-roll indexes, 145·3 and 214·4, respectively (based on the 1923-25 average as 100) were the highest on record and were 9·2 per cent and 35·6 per cent higher, respectively, than the indexes for August 1941. As emphasized in previous reports, the gains in pay rolls over the year interval were much larger than in employment due primarily to increase in the number of hours worked, to overtime premiums, and to increases in basic wage rates.

Metal mining employment fell off 1·2 per cent due primarily to reductions in copper, lead and zinc, and gold and silver mining. Operators of iron mines increased their forces by 1·4 per cent. In the remaining four major mining industries employment declines ranged from 0·4 per cent in quarrying and non-metallic mining to 0·8 per cent in bituminous coal mining. Compared with August 1941 employment in metal mines showed an increase of less than one per cent while anthracite and bituminous coal mines reported reductions of 6·7 and 0·4 per cent, respectively, quarrying and non-metallic mines a reduction of 4·7 per cent, and crude oil producers a reduction of 8·6 per cent.

In public utilities employment gains of 0·5 per cent reported by telephone and telegraph

companies and 0·4 per cent reported by street railways and busses were offset by a decline of 1·2 per cent in the electric light and power industry, which was effected by government restrictions on the use of materials. The gains of 7·5 per cent in employment, and 19·2 per cent in pay rolls since August 1941 in the street railway and bus industry reflected an increased demand for public transportation resulting in increased hours, as well as wage-rate increases.

In the service industries larger-than-seasonal employment declines were shown, the most pronounced loss being in the dyeing and cleaning industry (2·6 per cent). Year-round hotels reported 1·3 per cent and laundries 1·4 per cent fewer employees. Brokerage firms reported an employment reduction of 2·9 per cent and insurance firms a loss of 0·5 per cent.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the Labour Gazette from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Mining

Ottawa, Ontario.—Algoma Ore Properties and Federal Labour Union, No. 23159 (American Federation of Labour).

Agreement negotiated following an investigation into the dispute by an Industrial Disputes Inquiry Commissioner, as noted on page 1124 of this issue. This agreement comes into effect September 16, 1942 (subject to the approval of the National War Labour Board), and is to remain in effect to September 15, 1943, and thereafter from year to year, subject to notice.

No discrimination against any employee because of union membership and the union is to be the sole bargaining agency for the employees.

Hours: 8 per day, a 48-hour week. Overtime to be paid at time and one half except for shovel operators who are paid overtime only after 10 hours' work. The wage scale in effect to form part of the agreement and to remain in force except for adjustments which may be sanctioned by the National War Labour Board, both parties agreeing to make a joint application to the Board for an increase in the cost of living bonus.

Provision is made for seniority rights, one week's vacation annually after two years' service and for the settlement of disputes. If unable to settle a dispute, the parties agree to refer it to a board under the federal Industrial Disputes Investigation Act and to abide by such board's award.

Manufacturing: Vegetable foods, etc.

Montreal, P.Q.—Imperial Tobacco Company of Canada, Ltd. and the Tobacco Workers' International Union, Local 234.

Agreement reached following strike noted on page 1133 of this issue. Agreement to be in effect from September 10, 1942, to March 15, 1944, and thereafter from year to year, subject to notice.

Employees are at liberty to join or not to join the union or to resign from it until September 19, 1942, after which all who are then union members or who later join must maintain their membership.

Hours: 48 per week for day workers and firemen; 40 and 48 hours on alternate weeks for shift workers; 72 hours for watchmen, 66 hours for janitors. Overtime: for day workers (except maintenance men), time and one-half for work over 10 hours Mondays to Fridays inclusive, over 5 hours on Saturdays or over 48 hours in any week; for maintenance men, time and one-half for work over 10 hours Mondays to Fridays inclusive, over 5 hours on Saturdays or over 54 hours in any week; for shift workers, time and one-half for work over 10 hours in any day or 48 hours in any week; for watchmen and firemen, time and one-half for work over 60 hours and 56 hours respectively. Time and one-half for all work on Sundays and holidays for all except watchmen and firemen.

The wage scale existing at the time the agreement, including the cost-of-living bonus as required by law from time to time, is to be maintained, subject to such modifications ordered by the Regional War Labour Board upon an application being made to increase wage rates by 5 cents per hour. The company is to meet the wages committee of the union to discuss the setting up of a classification of jobs and wages throughout the entire plant.

Provision is also made for: seniority rights; a one week's vacation with pay after one year's service except for salaried employees who had been receiving two weeks' vacation which shall be continued; and for the settlement of disputes.

Manufacturing: Animal Foods

Correction

Moose Jaw, Sask.— Swift Canadian Co., Ltd., and United Packing House Workers of America, Local 177.

In the summary of this agreement published in the August issue, page 975, it was erroneously stated that a two weeks' vacation was granted after two years' service. This should have read a two weeks' vacation after five years' service.

63621—7½

Manufacturing: Leather Products

Toronto, Ontario.—A Certain Shoe Manufacturing Company and the Shoe and Leather Workers Organizing Committee.

Agreement reached following the strike and federal government conciliation (Labour Gazette, February, page 156). Agreement to be in effect from January 2, 1942, to December 31, 1942. Either party desiring a change to give 30 days' notice before terminating date.

Only union members to be employed if available. If none available other new employees must become union members after their probation period. The company to deduct union dues from wages and pay same over to the union.

Hours: 46½ hours per week; overtime may not exceed 6 hours in any one week. The wage scale consists of piece work rates. Whatever bonus arrangement is made compulsory by the government will be paid. The company agrees to recognize seniority when laying off workers, "keeping in mind the special abilities of employees."

Manufacturing: Textiles and Clothing

Cornwall, Ontario.—Canadian Cottons, Ltd., and the United Textile Workers' Union, Local No. 2 (Cornwall).

Agreement to be in effect from April 1, 1942, to March 31, 1943, and thereafter from year to year subject to notice. The terms of this agreement are similar to those of the agreement previously in effect between this same company and the Cotton Workers' Union, Federal Local No. 2, which was summarized in the Labour Gazette, September, 1941, page 1156.

Manufacturing: Metal Products

Montreal, P.Q.—RCA Victor Co., Ltd., and Their Hourly Paid Employees, Represented by the Metal Trades Council's RCA Victor Union.

This agreement which is in effect from September 11, 1942, to September 10, 1943 (or 1944 if no notice is given previous to September 10, 1943) is published in the report of the board under the Industrial Disputes Investigation Act on page 1125 of this issue.

Manufacturing: Shipbuilding

Vancouver, B.C.—Burrard Dry Dock Co., Ltd., of North Vancouver, and the Amalgamated Building Workers of Canada, Shipyard Section (Shipwrights and Caulkers).

Agreement to be in effect from August 26, 1941, for the duration of the war and wartime contracts. The agreement with this company is the same as the agreement with another company, effective from October 17, 1941, which was summarized in the Labour Gazette, December, 1941, page 1570. (The basic wage rate for shipwrights, joiners, boatbuilders and caulkers is 90 cents per hour plus a cost-of-living bonus of 4 cents per hour from June 1, 1941, with adjustments to be made in accordance with federal government Orders in Council.)

Vancouver, B.C.—West Coast Shipbuilders Ltd., and the United Brotherhood of Carpenters and Joiners, Local 452.

Agreement in effect from May 26, 1942, for the duration of the war and wartime contracts.

No obligation on any employee to join, and no discrimination against any employee for belonging to this or any union.

Hours and overtime and holidays are to be as shall be made mandatory by the federal government or adopted by mutual agreement of the shipbuilders of British Columbia, the Departments interested and labour. Time and one-quarter for certain types of work, such as work in confined spaces where noxious fumes are present.

Hourly wage rate for shipwrights, carpenters, caulkers and joiners: 90 cents, to be adjusted from time to time in accordance with cost-of-living bonus as ordered by the Government.

Vancouver, B.C.—West Coast Shipbuilders, Ltd., and Welders' and Burners' Unit No. 4, Amalgamated Building Workers of Canada.

Agreement to be in effect from June 3, 1942, for the duration of the war and wartime contracts. This agreement is similar to the one summarized above between this company and the carpenters' union, with this exception: the hourly wage rate for electric and acetylene welders and burners is 90 cents, for helpers 67 cents, to be adjusted from time to time in accordance with cost-of-living bonus as ordered by the Government. Helpers advanced to become welders and burners to be paid their present rate for one month and 80 cents for a period not exceeding another three months, after which regular rate shall be paid.

Construction: Buildings and Structures

Winnipeg, Manitoba.—General Contractors' Section of the Winnipeg Builders' Exchange and the United Brotherhood of Carpenters and Joiners, Local 343.

Agreement to be in effect from June 1, 1942, to April 30, 1943. This agreement is similar to the one previously in effect and summarized in the Labour Gazette, May, 1941, page 591, and January, 1940, page 67, with the exception of an increase in wages of 5 cents per hour, making the hourly rate for journeymen $1, and for apprentices from 35 cents to 75 cents.

Calgary, Alberta.—Calgary General Contractors' Association and the United Brotherhood of Carpenters and Joiners, Local 1779.

Agreement in effect from April 1, 1942 to March 31, 1943. Negotiations for a new agreement to be entered into during January, 1943. This agreement is similar to the one previously in effect and summarized in the Labour Gazette, September, 1941, page 1157, with this exception: To the minimum wage rate of 95 cents per hour, is added a cost-of-living bonus of 3 cents per hour, such bonus to become effective the first pay period after endorsation by the Regional War Labour Board.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the Labour Gazette, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages, and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the extension of five new agreements and the amendment of two other agreements, all of which are noted below. Requests for the extension of new agreements for the fur manufacturing (wholesale) industry at Montreal and for municipal employees at Sherbrooke were published in the *Quebec Official Gazette* September 26. A request for the amendment of the agreement for the ornamental iron and bronze industry at Montreal was published in the September 5 issue with correction in the September 12 issue; for the amendment of the agreement for the tannery industry throughout the Province, in the issue of September 12; for retail stores at Quebec in the issue of September 19.

In addition, Orders in Council were published in the *Quebec Official Gazette*, September 19, amending the constitution of two parity committees.

Construction: Buildings and Structures

Building Trades, Quebec City and District

Two Orders in Council both dated September 2, amending this agreement (Labour Gazette, August, 1941, page 1009, and September, 1942, page 1097) were published in the *Quebec Official Gazette*, September 5. One provides that wages be paid regularly and entirely each week. The other provides for a cost-of-living bonus in conformity with federal Order in Council 5963 of 1941. As determined by the Regional War Labour Board, this bonus is equivalent to the addition of 5 cents per hour to all rates of wages mentioned in the original agreement, such bonus to be unchanged until August 15, 1943, whatever are the variations in the federal cost-of-living index.

Building Trades, Sherbrooke and Eastern Townships

An Order in Council, dated September 16, and published in the *Quebec Official Gazette*, September 19, makes obligatory the terms of a new agreement between L'Association des constructeurs des Cantons de l'Est (The Builders'

Association of the Eastern Townships) and Le Conseil national catholique des metiers de la construction des Cantons de L'Est (The National Catholic Council of Building Trades of the Eastern Townships).

The agreement is to be in effect from September 19, 1942, to March 31, 1943, and thereafter from year to year, subject to notice. It does not, however, affect building contracts signed before its adoption, which are subject to the previous agreement. The territorial jurisdiction comprises the counties of Sherbrooke, Compton, Frontenac, Stanstead, Shefford, Brome, Missisquoi, Richmond, Wolfe and Drummond and the following municipalities of Arthabaska County: Victoriaville, Princeville, Warwick, Tingwick and Arthabaska. This territory is divided into five zones: zone I, Sherbrooke and within five miles of it; zone II Granby, Farnham and Cowansville and within five miles of them; zone III, Drummondville, Asbestos, Magog, Victoriaville, Megantic and Windsor and within five miles of them; zone IV, Coaticook and within five miles of it; zone V, the rest of the district.

Hours: 48 per week; overtime at time and one half; work on Sundays and holidays, double time except for pipe mechanics, tinsmith roofers and electricians who are paid time and one half for such days.

*At Victoriaville and within five miles of it (except Arthabasca) the wage rates: for electricians is 65 cents for contractor (personal services) and 40 cents for journeymen; for pipe mechanics and tinsmith roofers is 60 cents for contractors (personal services) 35 cents for journeymen and 25 and 30 cents for junior journeymen.

Foremen to be paid 10 cents per hour extra.

Regulations and wage rates are established for apprentices. For maintenance men, wage rates for a 48 hour week are from $15.50 to $22 for journeymen and from $10.25 to $17.60 for labourers; overtime for maintenance men is payable at the hourly rates specified for their particular trade.

Transportation and Public Utilities

Longshoremen (Ocean Navigation), Quebec

An Order in Council, dated September 2, and published in the *Quebec Official Gazette*, September 5, makes obligatory the terms of an agreement between certain steamship companies and the Quebec Ship Labourers' Benevolent Society. The agreement is in effect from September 5, 1942, to December 31, 1942, and thereafter from year to year, subject to notice. It governs all longshoremen employed in loading and discharging ocean going vessels in the port of Quebec.

Basic hourly wage rates: 70 cents per hour for day work, that is for work done between 7 a.m. to 12 noon and between 1 p.m. and 5 p.m.; $1.05 for work between 5 p.m. and 7 a.m.; double time for work during nine hours and for all work on Sundays.

A war bonus of 7 cents per hour is payable in addition to the above basic rates.

Cost-of-living bonus: in addition to the rates of pay and war bonus stipulated, there is payable under the terms of federal Order in Council P.C. 5963 of 1941, a cost-of-living bonus of 7 cents per hour, this bonus to be adjusted in accordance with P.C. 5963, on the basis of one cent per hour each 1·6 point change in the cost-of-living index number.

Checkers (Ocean Navigation), Quebec

An Order in Council, dated September 2, and published in the *Quebec Official Gazette*, September 5, makes obligatory the terms of an agreement between certain steamship companies and the International Longshoremen's Association, Local 1605 (checkers). The agreement is in effect from September 5, 1942 to December 31, 1942, and thereafter from year to year, subject to notice. It applies to hourly paid checkers employed on ocean-going vessels in the port of Quebec.

Basic wage rates: 55 cents per hour for day work, that is for work done between 7 a.m. and 5 p.m.; 65 cents per hour for all work done between 5 p.m. and 7 a.m.; double time for Sunday work.

Cost-of-living bonus: Under the terms of the 1941 federal Order in Council P.C. 5963, a cost-of-living bonus of 9 cents per hour is payable, which is to be adjusted on the basis of one cent per hour change for each 1·6 point change in the cost-of-living index.

Longshoremen (Ocean Navigation), Montreal

An Order in Council, dated September 10, and published in the *Quebec Official Gazette*, September 19, makes obligatory the terms of an agreement between certain shipping and stevedoring companies and the International Longshoremen's Association, Local 375. The agreement is in effect from September 19, 1942, to December 31, 1942, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, October, 1940, page 1075, and December, 1938, page 1423, with the principal change being the following:

Cost-of-living bonus: Under the terms of federal Order in Council 5963, a cost-of-living bonus of 7 cents per hour over prevailing rates is payable, and will be adjusted on the basis of one cent per hour for each 1·6 point change in the cost-of-living index. This is to be paid in addition to the basic rates and the war bonus of 8 cents per hour which came into effect September 11, 1940. (The basic hourly rates are 77 cents for day work, 87 cents for evening work and 97 cents for night work.)

Shipliners (Ocean Navigation), Montreal

An Order in Council, dated September 10, and published in the *Quebec Official Gazette*, September 19, makes obligatory the terms of an agreement between certain steamship and stevedoring companies and the International Longshoremen's Association, Local 1552 (Shipliners). The agreement is in effect from September 19, 1942, to December 31, 1942, and thereafter from year to year, subject to notice, and covers all fitting of vessels in the harbour of Montreal for grain and cattle, also all woodwork in connection with the stevedoring gear, except where permanent gear men are employed. This agreement is similar to the one previously in effect and summarized in the Labour Gazette, November, 1940, page 1203 and December, 1938, page 1424, with this exception.

Cost-of-living bonus of 7 cents per hour is provided under the same conditions as in the longshoremen's agreement at Montreal summarized above, the basic rates and war bonus also being the same as for longshoremen.

Ratification by Mexico of International Labour Conventions

Formal ratification by Mexico of two International Labour Conventions was registered by the Secretarial of the League of Nations during the past few months. The number of Mexican ratifications is now 30, and the total number of ratifications of the 67 Conventions is 884.

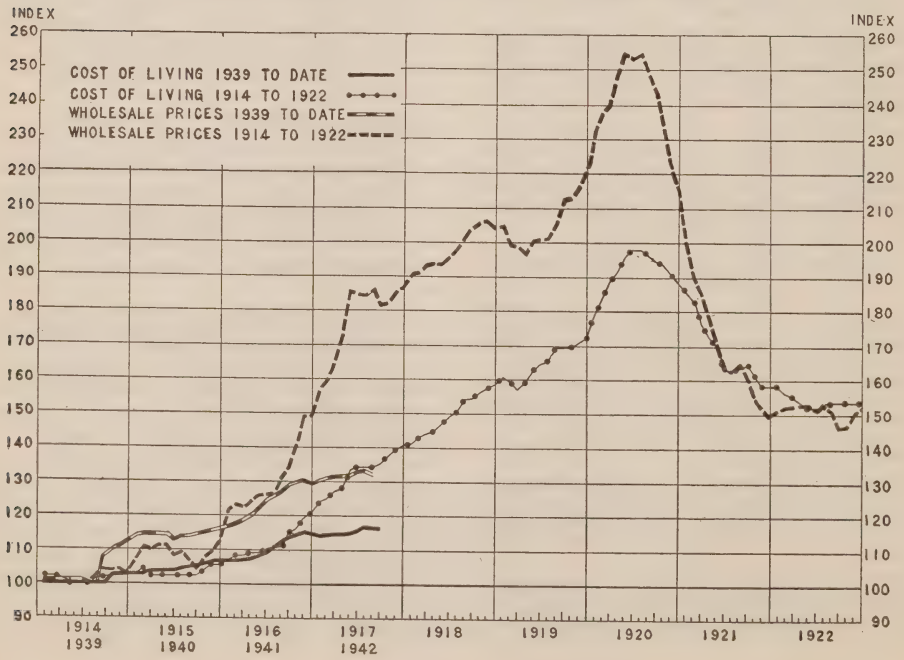
Mexican ratification of the Holidays with Pay (Sea) Convention, 1936 (No. 54) was registered on June 12, 1942. This is the third ratification of this Convention, which provides that seafarers shall have an annual paid holiday of not less than 12 days in the case of officers and 9 days for other members of the crew.

The other ratification was of the Convention concerning Statistics of Wages and Hours of Work, 1938 (No. 63) and was registered on July 16. This Convention provides that the countries ratifying it must undertake the compilation of statistics relating to wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture, on a uniform basis. Nine ratifications had previously been registered, though some countries, in accordance with the terms of the Convention, excluded certain parts from their acceptance.

PRICES, RETAIL AND WHOLESALE IN CANADA, SEPTEMBER, 1942

Cost of Living, Prices of Staple Articles and Index Numbers

A FURTHER slight decline in the official index number of the cost of living was recorded at the beginning of September. This index on the base period 1935 to 1939 as 100 was 117·4 at September 1, 117·7 at August 1 and 117·9 at the beginning of July, the latter figure being the peak since the autumn of 1930. The decline during the month under review was due mainly to lower prices for potatoes, beef, lamb, and onions which more than offset increases in the prices of eggs, butter and oranges. All of the other principal groups were unchanged. The index at the beginning of September one year ago was 114·7; 106·4 for September, 1940 and 100·8 for August, 1939. The increase in the index since the outbreak of war, therefore, was 16·5 per cent as compared with an increase of 34·3 per cent for the comparable period during the last war, that is, from July, 1914, to August, 1917. Since the introduction of price control last October the index, after adjustment to the base August, 1939 as 100 has advanced from 114·6 to 116·5 or 1·9 points. The increase for the corresponding period during the last war was 19·2 points, after the index was similarly adjusted to the base July, 1914, as 100.



Foods advanced 29·4 per cent between August, 1939, and September, 1942; clothing, 20 per cent; home furnishings and services, 16·7 per cent; fuel and light, 13·6 per cent; rent, 7·2 per cent; and the miscellaneous group, 5·7 per cent.

In compliance with Order in Council P.C. 6219 as amended the prices of cigarettes and tobacco used in calculating the index do not include the tax imposed on June 24, 1942, under the Special War Revenue Act.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the *Labour Gazette,* for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY 1914 AND IN AUGUST 1939-100

each issue of the *Labour Gazette* the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost-of-living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing, (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6; May, 120·9; June, 121·8; July, 123·9; August, 123·5; September, 123·0.

The accompanying chart shows the trend of the cost-of-living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The Dominion Bureau of Statistics index number of wholesale prices on the base 1926 as 100 advanced from 95·6 for August to 96·0 for September. The animal products group and the non-ferrous metals group each advanced slightly more than two per cent while there were small increases in the textile products and in the wood and paper products groups. Other groups in the chief component materials classification were unchanged. Comparative figures for the general index at certain previous dates are 93·2 for September, 1941; 83·0 for September, 1940; and 72·3 for August, 1939. The advance since the outbreak of war was 32·8 per cent as compared with an increase of 85·9 per cent between July, 1914, and August, 1917, the compaarble period of the last war.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of September of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the Labour Gazette. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the Labour Gazette.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (Labour Gazette, December, 1941, page 1462), the price ceiling established by P.C. 8527 (Labour Gazette, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (Labour Gazette, October,

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 1220. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Retail prices of beef continued downward at the beginning of September the decreases having been provided for under the regulations of the Wartime Prices and Trade Board. Sirloin steak averaged 37·3 cents per pound at

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

September 1, as compared with 38·8 cents one month earlier; 39·6 cents at July 1; and 28 cents at August 1, 1939. During the last war the advance during the comparable period was from 24·7 cents for July, 1914, to 31·8 cents for August, 1917. The price of fresh loin of pork has changed little in recent months the September average being 33·9 cents per pound as compared with 34 cents for July. Bacon was little changed at 39·7 cents per pound. The increase since the outbreak of war was about 10 cents per pound as compared with an advance from 25·5 cents for July, 1914, to 39·8 cents for August, 1917. A seasonal increase was recorded in the price of eggs from 39·8 cents per dozen at the beginning of August to 44·4 cents at September 1. Under an order of the Wartime Prices and Trade Board maximum wholesale prices were set in each of 11 zones as well as the retail "mark up." The price of creamery butter averaged 39·1 cents per pound at September 1 and was little changed from the previous months. Production during the first eight months of the year was three per cent lower than for the corresponding period of 1941. Stocks in storage at September 1 were reported to be about 20 per cent lower than at September 1, 1941. The production of cheese during the eight months period of 1942 was 42 per cent greater than for the equal period in 1941. The price at September 1, 34·3 cents compares with 34·6 cents in August, 1942, and 21·5 cents in August, 1939. The advance for the comparable period in the last war was from 19·4 cents for July, 1914, to 30·3 cents for August, 1917. Onions declined from 6·3 cents per pound in August to 5·4 cents for July. A substantial seasonal fall in the price of potatoes was recorded for September 1, when the price averaged 43·7 cents for 15 pounds as compared with 57 cents at August 1. At September 1, 1939, the price was 27 cents.

The following are the prices reported for Welsh coal, "Cobbles" and "French Nut" at the beginning of September, 1941; Halifax, $18.50; Charlottetown, $17.90; Saint John, $18.50; Quebec, $16.50; Three Rivers, $17.25; Sherbrooke, $18.75; St. Hyacinthe, $17.50; Montreal, $17.75.

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) New series. (g) Until end of 1927 "Dr. Lorenz." (h) Prior to 1926, the number of commodities was 236; from January 1926, to December, 1933, 502; and since January, 1934, the number is 567. (i) Average for twelve months ending June.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables which appear quarterly give the official and certain other index numbers of the cost-of-living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries.

Since these tables are compiled from British and foreign sources the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the Labour Gazette. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1930 = 100, was 158·6 for August, a decrease of 0·7 per cent for the month, due to a substantial decline in the price of malting barley and to a seasonal fall in the price of potatoes. "The fact that the whole index can be moved in this way by one or two quotations emphasizes the extent to which most prices have been stabilized, and this is also shown by the small rise during the third year of war—3·5 per cent, as against 42·8 per cent and 9·4 per cent in the first and second years respectively."

Cost of Living.—The index number of the *Ministry of Labour Gazette,* on the base July, 1914 = 100, was 201 at August 1, an increase of ½ of one per cent for the month, due to an increase in the fuel and light group as a result of a 6 per cent advance in prices of coal. All other groups were unchanged from the July level.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number, on the base 1926 = 100, was 99·2 for August, an increase of 0·5 per cent for the month. Increases in farm products, foods and textile products were partly offset by decreases in housefurnishing goods, chemicals and allied products and in miscellaneous commodities.

Cost of Living.—The Bureau of Labour Statistics index number, on the base 1935-1939 = 100, was 117·4 at August 15, an increase of 0·4 per cent for the month; food prices rose 1·2 per cent and miscellaneous commodities 0·1 per cent, while clothing, rent, the fuel, electricity or ice group and housefurnishings were slightly lower than the July level.

The index number of the National Industrial Conference Board, on the base 1923 = 100, was 98·1 for August, a rise of 0·3 per cent for the month, due to slight advances in food and clothing prices, the other groups remaining unchanged.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Supreme Court of Canada Restores Judgment Granting Damages to Labourer Injured by Saw Machine

THE Supreme Court of Canada unanimously overruled a decision of the Ontario Court of Appeal and restored the judgment of the trial judge granting $4,000 damages to a workman who had lost a leg as the result of an injury suffered during the course of his employment when the flywheel of a sawing machine flew loose and struck him (Labour Gazette, January, 1942, p. 123). Costs were granted throughout.

The sawing machine was not owned by the respondent (defendant) but by one Laidlaw who was employed by the respondent at an hourly rate to supply and operate the machine. The finding of the Appeal Court was that Laidlaw was an independent contractor, and that the defendant was not responsible for machinery of which he was not the owner and over which he had no control.

The Supreme Court rejected this reasoning. It held that it is always the personal duty of an employer to supply proper equipment and to select properly skilled persons to superintend it. "The employer can no more escape the consequences of non-performance of his personal obligation to his employee merely by employing an independent contractor than he could by placing the responsibility on the shoulders of another employee." In the present case it was established that the accident had resulted from a defect in the equipment and that Laidlaw was not competent to take charge of the machinery. Therefore, the respondent, who was ultimately responsible for these matters, was liable for damages. *Marshment v. Borgstrom,* Supreme Court of Canada, October 6, 1942.

Alberta Union Officials Enjoined from Interfering with Former Members' Employment

Mr. Justice Shepherd in the Supreme Court of Alberta, Judicial District of Calgary, granted certain ex-members of a trade union an injunction restraining the officials of their former union from interfering with their contractual rights with the publishers of a Calgary newspaper and causing their dismissal from employment. The defendants, who were the president and secretary of Calgary Printing Trades Union Local No. 1, Canadian National Printing Trades Union, were sued personally and as representing the union. A temporary injunction had been obtained earlier.

Local No. 1, whose members consisted of printers employed by the two Calgary daily newspapers, the *Albertan* and the *Herald,* had concluded separate agreements with the two papers in 1938, and had entered into new agreements in 1941. The 1938 agreement with the *Herald* had been more favourable than that with the *Albertan,* and in 1941 the disparity in the terms was even greater. The members of the union who were employed by the *Albertan* had expressed considerable dissatisfaction with the 1938 agreement and had shown a disposition to join another union, the International Typographical Union. At the union meeting when the proposed 1941 agreement was under consideration, several men employed by the *Albertan* "wanted to protest but got no opportunity to do so," according to the evidence. The President ruled that as the motion to accept the *Albertan's* offer did not call for a change in the wage-scale, a three-fourths majority was not required. The motion was carried by a straight majority.

Before the agreement was signed, certain of the *Albertan* employees notified the management that they were no longer members of the union and they would not recognize any agreement concluded by it. They were then expelled from the union and the president notified the management that they had no standing under the new agreement and would be replaced as union members became available. Two replacements were made and a temporary injunction was then obtained restraining further replacements.

The defendants relied on the principle enunciated by the House of Lords in *Sorrell v. Smith* (1925) A.C. 700, that "if the real purpose of the combination is not to injure another, but to forward or defend the trade of those who enter into it, then no wrong is committed and no action will lie, although damage to another ensues. . . ." The Court pointed out the difficulty of drawing "a definite line between acts whose real purpose is to advance the defendant's interests and acts whose real purpose is to injure the plaintiff in his trade." In the present case the agreement with the *Herald* would not have been affected even if the agreement with the *Alberton* had not been entered into and therefore the purpose of the defendants was not to advance the interests of their trade. The Court held that the opinion of the Law Lords in *Larkin v. Long* (1915) A.C. at p. 829 was pertinent:

> The liberty of a man's mind and will, to say how he should bestow himself and his means, his talents, and his industry was as much a subject of the law's protection as was that of his body. And, every person has a right under the law, as between himself and his fellow subjects, to full freedom in disposing of his own labour or his own capital, according to his own will. It follows that every person is subject to the correlative duty arising therefrom, and is prohibited from any obstruction to the fullest exercise of this right which can be made compatible with the exercise of similar rights by others.

Corbett et al. v. Canadian National Printing Trades Union et al., Supreme Court of Alberta, Judicial District of Calgary, May 6, 1942.

Appeal Allowed of Theatre Proprietor from Conviction under Alberta Minimum Wage Order

An appeal by the proprietor of a Calgary theatre from a conviction made in Magistrate's Court for alleged violation of an Alberta Minimum Wage Order was allowed by His Honour Judge J. W. McDonald in the District Court of Southern Alberta. The appellant had employed a female worker for four hours a day six days per week. Order 5, under the Minimum Wage Act, provides that "no employer shall employ in his theatre any female employee at a rate of wages which is less than $14 for a week of six days," and that in the case of employment for less than six days per week at least 50 cents an hour must be paid.

The Court held that the appellant has a common law right to employ a person for four hours a day six days a week and that there is nothing in Order 5 to deprive him of this right. At the same time, when he employs a person in this manner he is not required to pay her $14 per week, but merely "at the rate of $14 per week." The minimum rate of 50 cents per hour applies only to persons employed irregularly. When only four hours are worked in a day, a wage of $7 is at the rate of $14 per week. "Apparently the Regulations of the Board in Order No. 5, do not contemplate employment of the kind in question in the case at the bar, to be specially

dealt with; and I cannot see that Mr. Barron is defying the law or the Regulations in acting as he has done." *The King ex rel. F. G. Cope v. J. B. Barron,* District Court of the District of Southern Alberta, July 31, 1942.

Municipal Authorities in Britain Subject to Conditions of Employment and National Arbitration Order, 1940

On September 8, the House of Lords held that municipal authorities are bound as much as other employers by the Conditions of Employment and National Arbitration Order, 1940, under which the Minister of Labour may refer a labour dispute to the National Arbitration Tribunal whose award is binding on both parties (Labour Gazette, 1940, p. 760). The question arose out of negotiations between the Borough of Bolton and a trade union, the National Association of Local Government Officers, in which the latter claimed that it should be made a condition of the contract of service of the Borough's officers that their pay would be made up if they undertook war service. This claim was rejected by the Borough authorities and the case was referred by the Minister of Labour to the National Arbitration Tribunal. The Corporation thereupon applied successfully to the Divisional Court for an order prohibiting the tribunal from adjudicating in the matter. The Association successfully appealed the decision of the Divisional Court, but the decision was restored by the Court of Appeal.

The Borough authorities contended (1) that a dispute involving a municipal corporation is not a trade dispute within the meaning of the Industrial Courts Act, 1919 (in the Conditions of Employment and National Arbitration Order the expression "trade dispute" has the same meaning as in the Act); (2) that in any case the term "trade dispute" could not be applied to a dispute as to the payments to be made to officers after they had ceased to serve the Corporation, and (3) that the Corporation has no power to determine the issue in advance for all its employees.

The Lord Chancellor, in giving judgment, rejected all three contentions. With regard to the first, he pointed out that in the Industrial Courts Act a "trade dispute" means a dispute between employers and workmen or workmen and workmen "connected with the employment or non-employment, or the terms of the employment or with the conditions of labour of any person," and that a workman is "any person who has entered into or works under a contract with an employer, whether the contract be by way of manual labour, clerical labour or otherwise." The definition of "workman" was held by His Lordship to be broad enough to include all persons employed under a contract of service, and therefore the term "trade" did not impose any limitation on the term "dispute."

The second point turned on the interpretation of the Local Government Staffs (War Service) Act, 1939, which provides a local authority with power to make up the remuneration of its officers who undertake war service. His Lordship held that while the Borough could not make such payments except during an ex-officer's war service, it could nevertheless agree beforehand with an officer to make the payments if he undertook war services, and that this would thereupon become a contractual term of his employment. It was a fallacy to regard the payments authorized by the Act as mere gratuities which could in no circumstances be the subject of contract.

Finally, there was nothing irregular or in excess of the powers of the Corporation if it bound itself or was required by an award of the tribunal to bind itself to make the payments. *National Association of Local Government Officers v. Bolton Corporation,* House of Lords, September 8, 1942.

CONFEDERATION OF CATHOLIC WORKERS OF CANADA

Summary of Proceedings of Twenty-first Annual Convention

OVER 226 delegates attended the twenty-first annual convention of the Confederation of Catholic Workers of Canada in Montreal, September 18-24. In addition to the annual reports of the President and the Confederal Bureau, special reports on the employment of women and compulsory school attendance were considered and nearly a hundred resolutions were adopted. The Convention was opened with a Mass celebrated by the General Chaplain of the Confederation followed by a banquet at which the Dominion Minister of Labour was represented by Mr. L. Trottier, Chairman of the Unemployment Insurance Commission.

The Confederal Bureau reported that membership in the Confederation had increased from 46,032 in 1941 to 46,447 by May 31, 1942, although the number of syndicates affiliated had declined from 187 to 186. Study circles increased from 40 to 75. Twenty new affiliations were reported, 8 syndicates joining through one of the eleven affiliated federations covering: building, asbestos, barbers, printing,

commerce, clothing, textiles, leather and shoes, gloves, furniture and pulp and paper.

The officers elected for 1942-43 were president, A. Charpentier, Montreal; vice-presidents, E. Tellier, Three Rivers; O. Filion, Montreal; A. Roberge, Quebec; L. P. Boily, Jonquiere; secretary, Gerard Picard, Quebec; treasurer, A. Bourdon, Montreal; directors, P. Girard, Montreal; R. Gosselin, Quebec; J. Vallieres, Three Rivers; M. E. Cadieux, Sherbrooke; M. Lavigne, Hull; R. Hermini, Chicoutimi; O. Bell, St. Hyacinthe; federation representatives, O. Cyr, Asbestos; J. Dorion, Quebec; P. E. Cabana, Montreal; J. A. Anzalone, Quebec; E. St. Amand, Montreal; W. Cloutier, Victoriaville; P. Lessard, Port Alfred; I. Rousseau, Victoriaville; and L. Morency, Quebec. Representatives from the federations for printing, textiles and gloves have not yet been chosen.

President's Address

In his seventh presidential address, Mr. Charpentier referred, among other matters, to the Confederation's collaboration with the Dominion Government in problems arising out of the war. In particular, he spoke of its representation on boards and committees connected with the Dominion's policies concerning wages stabilization, selective service and unemployment insurance and the inclusion of a Confederation representative in the Canadian delegation to the New York meeting of the International Labour Conference last fall. He also pointed to the Confederation's support of the Victory Loan and other war finance measures, its stand against raising the ban on the Communist party and the rarity of strikes involving its members as other evidences of its aid to the war effort.

Dominion Wages Policy

On the question of the Wages Control Orders, Mr. Charpentier declared that the Confederation, recognizing the dangers of inflation, had supported the Government from the beginning in its wages stabilization policy. However, the Confederation believed that the policy should have been applied in Quebec, to industries to which the Collective Agreement Act applied, through the machinery of that Act. Failure to do so had made it almost impossible for the Act to function in such industries. The President pointed out that the provisions in the Collective Agreement Act for extending the terms of an agreement to non-parties created a situation different from that in any other province.

As regards the Dominion Order in Council setting minimum wages for persons employed on Dominion Government contracts for supplies and equipment, Mr. Charpentier considered that conditions had been improved by entrusting the enforcement of the Order to the inspectors of the provincial Minimum Wage Commission and the joint committees set up under the Collective Agreement Act but the Order was still difficult to apply, partly because the rates set were too far above the prevailing rates in Quebec. In his opinion it should be amended so that employers who refused Government contracts should not be better off than those who took them, and the status of employers only partially engaged on war contracts ought to be clarified. The Confederation believed that the best way to fix uniform rates and to adjust cost-of-living bonuses was to call a national conference to consider each industry. He also asked that the disparity in the cost of living between different sections of the country be considered in computing cost-of-living bonuses and setting national minimum wages for each industry. He suggested that the Dominion Bureau of Statistics should revise its machinery for determining the cost-of-living index so that in co-operation with provincial authorities it could make a separate index for each province. The creation of a provincial office to determine the cost-of-living index was also advocated.

Industrial Relations

The President regretted that strikes had been resorted to in Quebec during the past year but attributed most of them to the refusal of employers to negotiate with employees' associations and to irritation caused by the slowness of the machinery of the Regional War Labour Board.

Considerable alarm was expressed by Mr. Charpentier at the anti-union activities of employers and the threat to the Catholic syndicates from rival unions. He recognized that the hostility of some employers arose from their opposition to being subjected to a collective agreement through the operation of the Collective Agreement Act instead of by individual negotiation with their employees, and declared the Confederation must overcome this hostility. He reported that several employers have been trying to destroy the syndicates by substituting shop committees for them, dragging out negotiations, fostering divisions, and favouring the organizing activities of rival unions. He charged that certain officials of the Federal Department of Labour were conniving in this "conspiracy" against the syndicates.

In regard to organizing activities in war industries, he protested against what he considered the arbitrary way in which Federal Government officials determined the procedure for taking votes to decide between rival unions, and questioned their right to take such votes if no strike threatened. He suggested that it would be more democratic to let employees in Government-owned plants belong to the union of their choice and to give all unions proportionate representation on negotiating committees.

Unemployment Insurance

In his opinion employers and workers were gradually adjusting themselves to the Unemployment Insurance Act but he stated that some workers had difficulty in recovering their cards from employers on dismissal. He expressed the hope that there would be co-operation between the Employment and Selective Service officers and trade unions in the matter of placement and that trade unions would not be deprived of their function in that respect.

Provincial Government

Mr. Charpentier mentioned with satisfaction amendments to various enactments of the Quebec Legislature in the past year and the creation of Superior Councils of Labour and Technical Education. He urged the Provincial Government to take full advantage of the new Dominion Vocational Training Act.

A strong plea was made for the restoration of provincial jurisdiction after the war in the field of labour regulation particularly in regard to the contract of employment and trade union law:—

> In order that national Catholic syndicalism may survive and attain its full development, and that a corporate and co-operative organization may be realized in our province along the lines preached by the Church, it is fundamental that the present government after the war recover its sovereign power on these two points of social legislation.

Corporatism

Mr. Charpentier discussed at length the Confederation's theories regarding the corporate organization of society. "Only corporatism and co-operation will be able to save the country from state socialism or the dictatorship of monopolies," he declared. The existence of 65 collective agreements operating under the Collective Agreement Act and the establishment of 20 consumers' co-operatives in the last three years were indications of progress. A unique co-operative venture was the construction of 16 workers' houses by members of the asbestos workers' syndicate. He urged the organization of more co-operatives, syndicates and corporations and stressed the importance of freedom of association. The President expressed his pleasure with their progress in securing recognition, union shops and collective agreements and praised the activities of the youth and other societies of workers which were educating their members in Catholic trade unionism. He referred to the Confederation's affiliation with the League of Nations Society and its endorsement of the Atlantic Charter.

Report of the Confederal Bureau

In its report the Confederal Bureau urged that organized labour be given a larger share in administration and suggested the establishment in each industry of a council equally representative of labour and management to advise the responsible Minister regarding the wartime regulation of the industry. The Bureau asserted that the Order in Council fixing minimum wages for Dominion Government contract work was not enforced and suggested that it should be extended to all plants whether on war work or not, after appropriate adjustments had been made in regard to collective agreements. Careful consideration was urged of the proposal that employers should be compelled to bargain with the representatives of organized labour as it was believed that such a step might open the door to a Canadian Wagner Act.

In regard to the Wages Stabilization Orders, the Bureau outlined the difficulties of industries seeking to reconcile the Wages Order with collective agreements under the Collective Agreement Act. It reported that the shoe industry had worked out a satisfactory arrangement with the Regional War Labour Board and conditions in other industries were being considered by the Regional Board.

The report on the membership emphasized that the decrease during the year in the number of syndicates was due to a number having been struck off the lists since the last meeting. In spite of this, there had been a gain of over 400 in the total number of members. The federations showing increases were construction, boots and shoes, asbestos, commercial employees and clothing. In addition, local unions not linked with any federation increased from 36 to 44.

Compulsory School Attendance

The 1941 convention of the Confederation referred the question of compulsory school attendance to the Confederal Bureau. Its

report to the 1942 convention, which was approved, stressed the need for a compulsory school attendance law particularly in urban areas but recommended that in all centres of over 10,000 population, school boards should be permitted to adapt the law to local conditions. The report also suggested certain reforms which would facilitate the adoption of the law. It urged that the primary course should be cut from seven to six years, the curriculum simplified, and text-books, where possible, should be made uniform to reduce their cost and should be provided free. It proposed the repeal of the law which had been passed when there was a shortage of school accommodation, forbidding children under seven entering school. The report recommended further that children should be required to remain at school until they completed the primary course or were 15 years of age. At present, the Bureau stated, 80 per cent leave school before they are 15. The introduction of vocational guidance for all pupils past the third grade and an increased number of trade schools were also urged.

The argument that a compulsory school attendance law would not be necessary when a full program of social security was developed was rejected by the Bureau even though it recognized that poverty and unemployment had caused much of the decline in school attendance. The report stated that a compulsory attendance law—

> seems justified to us by the alarming decline in attendance in the primary course, a new phenomenon due either to the poverty of the family or to the child's desire for gain, or to his insubordination or to the apathy or lack of authority of his parents. We consider a desire for education should be developed among a greater number of our children who would be subject to this law to the age of adolescence. The need for compulsory school attendance seems apparent from the unpreparedness of our children who leave school at 13, 14 and 15 years to take courses at technical and trade schools. Compulsory education is necessary because of the alarming increase in the proportion of wage-earners in the population and of their greater need for education so that they may be better fitted, morally, economically and socially, for life and modern society.

Employment of Women

The report to the Convention on the employment of women was prepared by the Confederal Bureau after the Dominion Minister of Labour last March had asked for its views on employment of women at night.

A study made by the Confederation in May revealed that at that time over 25,000 women were employed in Quebec industries. Many were working up to 11½ and 12 hours a day in plants operating on one- and two-shift systems. Since the beginning of the war nearly 100 plants had been authorized by the provincial Department of Labour to employ women at night. It was found that there were plants where the accident rate for women was high as a result of fatigue, where women were exposed to industrial diseases, and where they were lifting unduly heavy weights.

The Bureau recognized that the employment of women was necessary to the war effort but urged that the Federal and Provincial Governments act to protect these workers. The Dominion Government was asked to stipulate the conditions under which women might be employed on Federal contracts in the same way as it set minimum wages, and to press the Provincial Governments to enforce similar conditions elsewhere. The conditions recommended included the limiting of hours, a three-shift system of eight hours each wherever possible, rest pauses and light nourishment in mid-spell, and restrictions on weight-lifting. The report also advocated prohibiting the employment of mothers of young children, especially at night, in the interests of their health and the welfare of their families. Night work for others should be tolerated only if absolutely necessary, should not exceed eight hours, and there should be safeguards against physical and moral dangers. In plants where accidents to women on night shifts were frequent, men too old or unfit for military service should be employed.

This report of the Confederal Bureau led to the adoption by the Confederation of several resolutions. Motions were approved urging that women be employed only when all available male labour was exhausted, condemning night work for women and expressing the opinion that the employment of mothers of young children was a threat to the family. For this reason the principle of establishing nurseries for the children of working mothers was disapproved. Inquiries into the conditions of work for women in war industries and in the clothing trades were requested, and the Government was urged to define what jobs women might do after considering their physical strength, age and actual and future role in society.

Resolutions

In addition to the resolutions mentioned above regarding the employment of women and school attendance, the delegates adopted motions concerning the administration of

the National Selective Service Regulations, the cost-of-living index, unemployment insurance, workmen's compensation, collective agreements and other matters.

Selective Service

One resolution requested that the National Selective Service Regulations be amended to prohibit any Selective Service Office supplying workers to a plant where the employees were on strike. Another urged that trade unions be authorized to issue to their members permits to seek employment, and that an employer be required to give the necessary written notice of separation to a worker on the first day after he gives him notice of dismissal. In the same motion, it was recommended that the construction industry should be exempt from the regulations requiring seven days' notice, and that permits to seek employment should be issued by the unions in the construction industry which would report to Selective Service within three days.

Cost of Living

As suggested in the President's address, resolutions were adopted urging the setting up of a provincial office of statistics to determine the cost of living and suggesting that the Dominion method of calculating the cost-of-living index should be revised and more account taken of local variations. A Royal Commission to inquire into the accuracy of the data on which the cost-of-living index was based was also suggested.

Another resolution advocated the extension of the cost-of-living bonus to all wage-earners and its exemption from taxation.

Unemployment Insurance

Several resolutions proposed changes in the Unemployment Insurance Act or its administration, and the Confederal Bureau was requested to study the machinery of the Act. It was suggested that special consideration in determining benefits be given to workers with families or other dependents and that benefits continue to be paid to beneficiaries who fall ill. Extension of the Act to lumber workers and the appointment of a woman to the Unemployment Insurance Commission were also requested. Complaints were made by building workmen that they lost more days' work waiting to get their insurance books from their employers than through lack of jobs. Motions were passed asking that employers who, through negligence, make their employees lose days of work should be penalized and that workers in the building trades should be given custody of their own books and receive insurance stamps from their employers in their pay-envelopes. Protests were also made that the worker had no way of assuring himself that the required number of stamps had been affixed and that he had been credited in the Commission's records with the exact number of days worked. It was requested, therefore, that the Commission or the employer should give the workman a receipt whenever he surrendered his insurance book and also at the end of each year when the books are turned in to the Commission for renewal. As an alternative to the latter receipt, the old book could be returned to the worker with a stamp on it to indicate that the Commission had recorded the information in it.

War Labour Boards

Resolutions requesting a simplification of procedure and an enlargement of the facilities of the National and Regional War Labour Boards were passed after complaints had been voiced regarding the slowness of the Boards in rendering decisions.

Workmen's Compensation

The extension of the Workmen's Compensation Act to all enterprises in the province was requested in one motion, and another asked that all diseases contracted in industry be compensatable. The asbestos workers' syndicate asked that asbestosis whether complicated with tuberculosis or not should be regarded as an industrial disease. Higher benefits were also demanded, and it was proposed that steps be taken to protect workers who fail to qualify for compensation because their employers neglect to report accidents. The painters' union of Three Rivers urged provincial action to ensure hygienic conditions for painters.

Collective Agreements

Two resolutions asked for the establishment of a labour tribunal to hear cases arising out of the Collective Agreement Act and other labour laws. Other motions requested that municipalities be subjected to the Collective Agreement Act as in the past and that overtime payments be computed on the basis of the worker's actual wage and not on the minimum rates fixed under the Act. Higher penalties were requested for employers hiring workers who do not hold a certificate of competency in industries where the joint committee for the industry has made the holding of such a certificate obligatory on all workers. The Building Federation asked that employers be obliged to pay their workers

immediately after suspension at the end of the work instead of making them wait until the following pay-day. In order to offset the objections of grocers not licensed under the Liquor Act who are opposing collective agreements in the grocery trade, a request was made that cities and towns be authorized to regulate the hours of licensed groceries.

Professional Syndicates Act

To eliminate the incorporating of company unions under the Professional Syndicates Act, a resolution demanded that all applications for incorporation be first submitted to the Minister of Labour before being approved by the Provincial Secretary. Another resolution asked that a confederation made up of several trade union federations in different industries have the same powers under the Act as a federation of unions in the same industry. It was also requested that trade unions be authorized to issue certificates of competency to their members after examination.

Conditions of Work

Sunday work was condemned in one resolution which declared that it did not further the war effort. Amendments in the Commercial and Industrial Establishments Act were asked to prohibit night work in bakeries, to forbid one man working alone at night in printing shops because of the danger of accidents, and to require retail stores to place the name of the proprietor on all signs and advertisements to prevent merchants falsely claiming that they are French-Canadian.

Wages and Taxes

It was requested that wages below $25 a week be allowed to increase up to that level without the permission of the Regional War Labour Board. A resolution demanding a minimum wage of $27 a week was referred to the Confederal Bureau for study. The payment of family allowances was urged and protests made that the Dominion Budget of 1942 was not more favourable to fathers of large families. Requests were made that trade union contributions and sickness insurance premiums should be deducted from the compulsory savings or refundable portion of the new income tax; that the amount deducted from a worker's wages for compulsory savings should be indicated on the pay envelope, and that a receipt should be given each year showing the amount of compulsory savings thus deducted and credited to the worker. A curb on instalment buying was demanded "to put an end to this kind of odious exploitation of the working-class." Complaints were made that the price ceiling was being violated.

Other Resolutions

The Convention advocated that the ban on the Communist Party and its propaganda should be continued. Reduction of the pensionable age under the Old Age Pensions Act from 70 to 65 was recommended. One resolution suggested that all building contractors should be required to satisfy the competent authorities as to their financial status. Strict application of the liquor law was demanded. The printing of the National Electrical Code in French was requested. Two resolutions urged that all municipalities with a population of at least 3,000 be brought under the Pipe Mechanics Act as the first stage in a progressive extension of the Act. The collaboration of the College of Physicians was considered desirable to secure a stricter application of provincial and municipal regulations regarding sanitation. An amendment in the Stationary Enginemen's Act was requested to forbid stationary engineers installing new heating or plumbing equipment.

Deputy Minister—BRYCE M. STEWART Associate Deputy Minister—A. MACNAMARA

VOLUME XLII] NOVEMBER, 1942 [NUMBER 11

MONTHLY SUMMARY OF MATTERS OF INDUSTRIAL INTEREST

Industrial Employment—Prices and Cost of Living—Business Statistics—Report of Employment and Selective Service Offices—Unemployment in Trade Unions—Strikes and Lockouts

INDUSTRIAL employment showed a further important decrease at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 13,142 firms, each with a minimum of 15 employees, representing practically all industries except agriculture, fishing, hunting and highly specialized business operations. The co-operating establishments employed 1,795,411 persons, or 14,707 more than in the preceding month; this gain of 0·8 per cent was rather smaller than the average at the beginning of September in earlier years of the record, being also smaller than at September 1 in any immediately preceding autumn.

The index number of employment (based on the average for the calendar year 1926 as 100), stood at 179·3, as compared with 162·7 at September 1, 1941. At the same date in recent years the index was as follows: 1940, 131·6; 1939, 119·6; 1938, 115·1; 1937, 123·2 and 1936, 107·1.

Reflecting the slightly less-than-average increase in industrial employment at the beginning of September, the seasonally-adjusted index declined fractionally, falling from 173·0 at August 1, to 172·3 at the date under review.

The weekly salaries and wages disbursed by the co-operating establishments aggregated $52,361,441; this exceeded by 2·7 per cent the sum of $50,970,885 paid on or about August 1 to the 1,780,704 persons then employed by the same firms. The per capita average rose from $28.62 in the preceding enquiry, to $29.16 at September 1. These two are the highest in the period during which the current statistics of payrolls have been collected.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon prices during the period 1935 to 1939 as 100 was 117·8 at the beginning of October; 117·4 for September 1; 117·9 for July 2; 115·5 for October 1, 1941; 107·0 for October 1, 1940; and 100·8 for August, 1939, the last pre-war month.

The increase in the index since August, 1939, down to October, 1942, was 16·9 per cent as compared with an increase of 35·3 per cent for the comparable period during the last war, July, 1914, to September, 1917. Since the introduction of price control the index, after adjustment to the base August, 1939, as 100 has advanced from 114·6 for October 1, 1941, to 116·9 for October 1, 1942, or 2·3 points. The increase for the corresponding period during the last war October, 1916, to October, 1917, 21·1 points after the index was similarly adjusted to the base July, 1914.

In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 96·8 for October as compared with 96·0 for September; 93·8 for October, 1941; 83·3 for October, 1940; and 72·3 for August, 1939. The increase between August, 1939, and October, 1942, was 33·9 per cent and between July, 1914, and September, 1917, was 80·9 per cent.

Business Statistics.—The latest statistics available reflecting industrial conditions in Canada are given on page 1234. The index of the physical volume of business which reflects activity in the production and distribution of goods has been revised to give increased representation to factors indicating the trend of war production. For September this index indicated little change from the previous month but was about 12 per cent higher than for September, 1941. In the former comparison substantial increases in the indexes of mineral production and of construction were offset by declines in electric power production and in the distribution of goods. Little change

65552—1½

was indicated in manufacturing. This group however recorded an increase of about 24 per cent in September as compared with one year earlier while much smaller increases were recorded in electric power production and in distribution. Substantial declines were recorded for mineral production and for construction in this comparison.

The index of employment was 10·2 per cent higher at September 1 than one year earlier and 49·9 per cent higher than at September 1, 1939, thus indicating a high level of productive activity.

Comparing the first nine months of 1942 with the corresponding period in 1941, the index of the physical volume of business was 23·6 per cent higher in the former period than in the latter. Industrial production averaged 29 per cent higher; manufacturing production 37 per cent higher and mineral production 17·9 per cent higher. Production of cheese increased from about 118 million pounds to 166 million while the production of creamery butter declined 2·6 per cent. The number of cigarettes released increased 11·5 per cent, steel ingot production 33·1 per cent;

(10) MacLean's Building Review. (a) Revised—For explanation see page 1235.

pig iron production 55 per cent; electric power production 15·1 per cent. The index of grain marketings declined 51·4 per cent in the same comparison and livestock marketings 5·2 per cent. Newsprint production was 3·8 per cent lower and the value of contracts awarded 24·1 per cent lower.

Revision of Index of the Physical Volume of Business.—The following statement as to the revision of the index was published in the Monthly Review of Business Statistics, October, 1942, issued by the Dominion Bureau of Statistics:—

The revision of the index of the physical volume of business consisted mainly in the application of a new set of weights. The components were weighted according to the value added during the current period by productive enterprises in mining, manufacturing, construction, electric power and distribution. The object was to weight the factors according to their present relative importance. The weights established on the basis of "value added" during the base period of 1935-39 resulted in an over-emphasis of production for civilian purposes during the war period. It was consequently decided to recompute the weights giving greater representation to factors indicating the operations of firms engaged on war production. A number of changes were also made in the factors included in the compilation. The result of the alterations is a much higher level for the index during the last two years or more.

Report of the Employment and Selective Service Offices.—Reports received by the Director of Employment and Unemployment Insurance from Employment and Selective Service Offices during the month of September, 1942, showed an outstanding gain in business transacted, both when compared with the preceding month and with the corresponding month of last year, this computation being based on the average number of placements recorded daily. The increase was due to National Selective Service Regulations under which employers seeking workers and persons desiring employment must obtain permits from Employment and Selective Service Offices. Manufacturing, services, trade and logging were mainly responsible for the increase registered under the first comparison and manufacturing, trade and construction under the second, all industrial divisions except agriculture showing increased placements over the previous month, and all apart from agriculture and services reporting a gain over September, 1941. The increase in manufacturing was exceptionally large under both comparisons. Vacancies in September, 1942, numbered 241,038, applications 221,352, and placements in regular and casual employment 102,827.

Unemployment in Trade Unions.—At the beginning of October, 1942, the percentage of unemployment among trade union members stood at 0·8 in contrast with percentages of 0·9 in September and 2·7 in October, 1941. The percentage for October was based on returns compiled from 2,272 local labour organizations with a total membership of 380,304 persons.

Strikes and Lockouts.—For the month of October, 1942, the number of strikes and lockouts recorded, the number of workers involved and the time loss in man working days again showed substantial decreases from the previous month but were slightly higher than for October, 1941. During the month under review there were 26 strikes recorded, involving 6,107 workers and causing a time loss of 26,926 man working days, as compared with 43 strikes in September, 1942, involving 13,316 workers, with a time loss of 37,838 days, and 23 strikes in October, 1941, involving 5,511 workers, with a time loss of 19,693 days. The more important strikes during the month were: steel plant workers at Windsor, Ont., textile factory workers at Beauharnois, P.Q., and coal miners at Nanaimo and Cumberland, B.C., and at Glace Bay, N.S.

Of the 26 strikes during October of this year 24 were terminated during the month. Three resulted in favour of the workers, seven in favour of the employer, one was a compromise settlement and 13 were indefinite in result. Two disputes involving 321 workers were recorded as unterminated at the end of the month.

Labour Unity in Ecuador

Labour organizations in Ecuador have settled their differences and have united to form a single body, according to a recent Allied Labour News despatch. The new organization is to be known as the Confederation of Ecuadorian Workers (C.T.E.). It has voted to affiliate with the Confederation of Latin American Workers (C.T.A.L.), being the twelfth Latin American labour body to do so. The C.T.A.L., whose first general conference was held in Mexico City in November, 1941, claims a membership of over four million.

NOTES OF CURRENT INTEREST

Visit of Canada's Minister of Labour to Great Britain

The Minister of Labour, Hon. Humphrey Mitchell, accompanied by the Deputy Minister, Dr. Bryce M. Stewart, and Mr. George Greene, the Minister's secretary, have been in Great Britain during the past month. This mission was undertaken for the purpose of ascertaining information on the functioning of British industry and labour under the exigencies of war production.

With this objective in view, the Minister made a close personal study of methods and techniques, and the application and allocation of man-power thereto. The Minister visited shipyards, airplane, gun and tank factories, and munitions plants, and observed at first hand the great contribution of British labour to victory. He also conferred with the British Minister of Labour, Hon. E. Bevin, on problems of war production.

Where practicable, the benefit of British experience will be applied in the Canadian program.

British Minister of Labour praises Canada's war production

In a press conference at the British Ministry of Information, on October 26, 1942, Mr. Ernest Bevin, the Minister of Labour, made the following remarks concerning the relationship between Canada and Great Britain on the industrial-labour front.

"I would like to say that the British Government are very anxious that the Press should do proper justice to Canada for the effort she is making in the war. She came in on the first day of the war and threw in her all and I can tell you, from the man power side and from the production side, what is very gratifying is that Canada moves very quickly on the basis of the rationalisation of arms production; that is to say, we get a quick and co-operative response whether it is in shipbuilding, aircraft, or anything else, to fit in with the problems we have in this country.

"In the discussion that goes on between the Minister of Labour in Canada and myself, and between Captain Oliver Lyttelton and his opposite number, Mr. Howe, in Canada, we are all four of us working very closely together, and now that we are in a tight corner for manpower in England it is a great advantage to us to be able to make the necessary adaptations so that Canada in the design of her war output fits in and dovetails in so well with the strategy of the war that we can get a good deal of relief by the use of manpower on the other side.

"I do not think there has ever been a case in which the labour force, the productive effort, of two countries has been more complementary and more helpful. Our relationships are so good; it is not a question of our telling them or they telling us, but immediately we have to make changes and to go in for this type or that type of production we are able to marry the Canadian effort with our own in such a practical way that it is a tremendous help to the total war effort. It is not only volume, but it is types, and the quick adaptation of types and as the strategy of the war changes and fresh demands are made upon us, the facility with which Canada co-operates with us is a tremendous asset in this war. I do not want it to be measured merely in terms of volume. You may get a lot of things you cannot use. The essential thing in this business is to get the things you can use and use quickly and to supplement and build up the output of your own arsenal at home.

"In the contacts we have had with Canadian Ministers, through Mr. Vincent Massey, who has been a tower of strength to this country in the war effort, we have met with ready co-operation and I am very anxious that the proper place should be given to Canada and her contribution to this tremendous struggle. In that critical period when we did not have very many friends, at least active friends, from 1940 onwards, the weight of the Canadian output and their resilience and turnover to production during that period played a very big part in enabling us to equip the Middle East Army and equip the Forces in this country at a speed much greater than would have been possible if we had not had, not merely the volume, but willing adaptation to the kind of weapons and materials we wanted. Now, with the loss of a great many of our raw materials, particularly certain types of metals, Canada means salvation to us.

"The way she has moved her men about in order to increase the output of, say, nickel and raw materials of that character has been a great gain not only to us but to the whole of the United Nations and in that spirit I would like Mr. Mitchell to convey to Mr. Mackenzie King and his colleagues what I know is the feeling of everybody not merely in the Government but those who have to design and make and deliver the equipment, appreciation of those two factors, volume, and, what has been so vital, I repeat, adaptability, which has fitted in so well with our war strategy. If you will take that message back I shall be very grateful, a message as coming from all the British people."

Employers may give Christmas bonuses

An employer may without an authorization or direction of a War Labour Board, even although no such gift was previously given by him, give a monetary Christmas gift to each of his employees, in an amount not in excess of $25.

The National War Labour Board has been advised by the Commissioner of Income Tax, that the position relative to taxation is as follows:—

(*a*) so long as any "voluntary bonus" does not exceed the amount paid in 1940, either to that employee or, in the case of a new employee, to another employee in the same occupational classification, the "voluntary bonus" so paid may be regarded for taxation purposes as an allowable expense of the employer. Where any "voluntary bonus" so paid exceeds this amount the excess will be disallowed to the employer as an expense of the business for tax purposes;

(*b*) under the Income War Tax Act, as amended by Chapter 28 of the Statutes of 1942, a tax deduction is required to be made at the source from all payments made to employees in respect of bonuses (including cost of living bonuses) for pay periods commencing after the 1st of September, 1942;

(*c*) where not charged by an employer to expense a monetary Christmas gift to an employee of an amount not exceeding $25 is not regarded as income of the employee for tax purposes.

Cost-of-living bonus stays at present level

The cost-of-living index at October 1 was 117·8, a decrease of only one-tenth of a point from the July index, and as a result the cost-of-living bonuses paid to employees in Canada will remain at their present level for the next three months from November 15, 1942, to February 15, 1943.

In a statement issued on November 4, the National War Labour Board made the following announcement:

"The Dominion Bureau of Statistics has found that the cost of living index number for October 1, 1942, is 117·8 (adjusted index 116·9) as compared with the cost-of-living index number for July 2, 1942, of 117·9 (adjusted index 117).

The Wartime Wages Control Order, P.C. 5963, provides in Section 48 (iv):

> "The amount of the bonus shall not be changed unless the cost of living index number has changed one whole point or more since the last general order of the Board requiring an increase or decrease in the amount thereof."

The index number not having changed by one whole point or more since July 2, 1942, pursuant to the provisions of P.C. 5963 as stated the National War Labour Board orders that the terms of its General Order dated August 4, 1942, shall continue to apply for the period November 15, 1942, to February 15, 1943, subject to the right of employers or employees to apply to a War Labour Board for authorization of payment of such an amount of cost-of-living bonus as a Board may determine to be 'fair and reasonable', under the provisions of the Order."

Decisions of National War Labour Board

Of the 422 cases in which Findings and Directions have been delivered to October 31, 1942, 235 had to do with wage increases, 43 with cost of living bonuses, and 144 were miscellaneous. Of the wage cases 215 were granted in full or in part and 20 were refused. Of the cost of living bonus cases 41 were granted and 2 were refused. Of the miscellaneous cases 130 were granted and 14 were refused.

One year of price control in Canada

One year has passed since the Prime Minister announced the price ceiling, and the Wartime Prices and Trade Board was given the responsibility for its administration.

The Economic Branch of the Research section of the Board has prepared a survey on "A Year of the Price Ceiling in Canada." The survey, which outlines in general terms the development of the price ceiling, is divided into two parts. The first discusses the price ceiling in relation to the broad problems of

wartime organization and control, for the price ceiling is an essential and integral part of the national economic policy. Reference is made to policies outside of the administration of the Wartime Prices and Trade Board with a view to indicating how the price ceiling fits into the broader canvass. All such references are based on official statements by the Prime Minister or by the Ministers concerned. The second part of the survey deals specifically with the organization and techniques which the Board adopted from time to time in carrying out the price ceiling policy.

Government expropriates aircraft plant

Ownership and management of the National Steel Car Aircraft plant at Malton, Ont., one of Canada's most important aircraft producers, has been taken over by a specially formed Crown company, the Department of Munitions and Supply announced recently. The company is primarily engaged in making Lancaster bombers.

In explanation of the expropriation action, a departmental statement said: "The government is taking over the plant in order to expedite operations and to maintain a community of interest and co-operation between the plant management, the Munitions and Supply Department, and the designers and builders of the Lancaster bomber in Britain."

In a number of previous instances the government has taken over direct management of important war plants by placing government appointed controllers in charge without any interference in the ownership. This course was followed at the Hamilton plant of National Steel Car following a labour dispute and has also been adopted in plants where production has not been considered satisfactory.

Compensation to be paid the National Steel Car Corporation Ltd. will be determined either by agreement or under statutory expropriation procedure.

Mr. J. P. Bickell of Toronto, prominent mining executive, has been named president of the government-owned company, named Victory Aircraft Ltd.

Establishment of new Program of "Job Relations Training"

"Job Relations Training" is the title of a new supervision training program being instituted by the Training Branch of the Department of Labour, and designed to develop team spirit between labour and management in war production.

In announcing the new course of training the Department of Labour had particularly in view the training of foremen and supervisors in war industries. The objective of the new program is definitely to achieve better relations between the management and the workers and a better co-ordination of effort in maximum production of a high quality.

To this end, typical units of the series will include such subjects as: "How to Start the New Employee Right"; "How to Prevent Accidents"; "How to Prevent Grievances."

This new program is to follow the installation of Job Instructor Training which was introduced by the Department in May as the first and basic unit in supervision training because with the thousands of new workers entering war industries the most pressing problem confronting supervision was to instruct these new workers by the best known methods in the shortest possible time.

Now that this program has been largely adopted by a large proportion of firms in war industries, the time for tackling other and no less important problems has arrived.

It is expected the new series will be ready and in operation early in November.

Training in plant schools

The success of plant schools —a new development in training for industrial occupations established on April 1 under the Training Branch of the Department of Labour—has been demonstrated by the results achieved, according to a statement issued, on October 28, from the office of the Minister of Labour.

Since the beginning of this program, 2,735 male and 1,629 female trainees have been enrolled in 48 plant schools. The purpose of these schools is to give instruction to company employees, both old and new, in modern industrial practice. These Government-aided schools are established in plants which comply with certain requirements as to working conditions, curricula, etc.

Instruction is being given in a wide variety of manufacturing operations including aircraft production, shipbuilding, machine shop and bench work practice, welding, power sewing, and fine instrument work.

Training is on a short-term basis, ranging between 2 and 12 weeks and, therefore, the potential output of these schools is considerable over a year, and it is considered they are filling a definite need that cannot be met adequately from other sources.

Part-time classes are also being conducted in industry with Government assistance for the purpose of up-grading workers to higher skills within the organization. Enrolment of men and women since April in part-time classes totals 14,419.

Expansion of War Emergency Training Program

Indicative of the rapid expansion of the War Emergency Training Program under the Department of Labour, is the increase of 1,000 trainees in September, as compared with August, in the training classes throughout Canada.

In a recent statement issued by the Department of Labour, it was announced that approximately 17,000 persons were attending war emergency training classes either full-time or part-time. During the six months since April 1, approximately 68,000 persons have received specialized training in some phase of war industry. Members of the Armed Forces being trained, in a wide variety of trades, numbered 8,628. A number of men honourably discharged from the Armed Forces were being trained under the rehabilitation plan in co-operation with the Department of Pensions and National Health.

It is interesting to note that parallel with a steadily decreasing supply of eligible male trainees the training of women for war industries is increasing. During the month of September one-half of the new trainees admitted to full-time pre-employment industrial classes were women. A similar proportion of women was enrolled in part-time industrial classes, and the percentage of women in both full-time and part-time classes is rapidly increasing.

A complementary feature of the War Emergency Training Program is the Job Instructor Training Plan which was announced by the Minister in May and which is designed to increase the instructing ability of foremen and supervisors. To date, some 6,000 foremen and supervisors have received the Department's certificate as War Production Job Instructors and from reports being received by the Department some 5,000 additional supervisors are to receive the course over the next few months.

Army course established at University of Toronto

The Department of National Defence in consultation with the University of Toronto has established a special one-year course in the elements of certain scientific subjects for 160 selected candidates possessing the requisite educational qualifications. The University of Toronto is conducting the course and providing accommodation and meals.

This special one-year course in the fundamentals of mathematics, physics and engineering, known as No. 1 Canadian Army Course, commenced on October 10, 1942, at the University of Toronto. Initial application by candidates was made to the University and the names of those possessing satisfactory academic qualifications were submitted to National Defence Headquarters. Applicants were requested to report for enlistment in the normal manner, it being understood that the final decision as to acceptability rested with the military authorities and no candidate was enlisted unless he satisfied the requirements set by the military authorities.

Enlistments were only permitted between the ages of 17-19 years inclusive. In the case of boys under 18 years the written consent of parents had to be given.

Until a boy reaches the age of 18 he receives boys' pay which is 70 cents per diem, after which he receives the standard rate of $1.30 per diem. Boys 18 years of age and over received standard rates of pay upon enlistment.

Personnel presently serving in the Canadian Army were eligible to attend the course provided they possessed the necessary academic qualifications and were selected by the proper military authorities.

Candidates who were accepted and properly enlisted are housed in University of Toronto residences and subject to military supervision and discipline. Each student receives free tuition and text books, board, lodgings, medical and dental attention in addition to his pay.

All candidates while in attendance at the University undergo Basic Training under the direction of the Department of National Defence. On successful completion of the course, candidates proceed to Advanced Training Centres to complete training in the arm for which they have shown special aptitude.

During the period of the course candidates who are found to be below the desired standard or who are found to be otherwise unsatisfactory may be removed and sent to Basic Training Centres to proceed through the normal training channels as enlisted soldiers.

Successful candidates, on proceeding to Advanced Training Centres, will be regarded as potential officers, it being clearly understood, however, that no undertaking exists that all or any candidate will be granted vacancies on quotas proceeding to Officers' Training Centres.

The University of Toronto has undertaken to give due academic credit to successful candidates who may desire to complete a course at that University at some future date.

Bulletin No. 3 of National War Labour Board

The National War Labour Board has issued a pamphlet known as Bulletin No. 3 containing explanatory notes on the Wartime Wages Control Order, P.C. 5963, of July 10, which supersedes P.C. 8253.

Bulletin No. 3 is in five parts; Parts I and II are a reprint of the Order in Council; Part III is devoted to Explanatory Notes; Part IV contains an explanation of the National War Labour Board's policy in regard to the payment of wages to men, youths, and less capable and experienced men engaged to do work formerly done by experienced men; and Part V contains instructions to employers and employees in regard to submissions to a War Labour Board. In addition, there is an Appendix which includes the National War Labour Board's general Order of August 4, on the cost-of-living bonus.

The publication has been widely distributed, and additional copies may be obtained from the offices of the Regional War Labour Boards.

Supplement on Wages and Hours of Labour

Report No. 25 in the series on "Wages and Hours of Labour in Canada" has been issued as a supplement to the LABOUR GAZETTE for October, 1942, and contains data for the years 1929, 1940 and 1941.

In the report will be found a table of index numbers of rates of wages which shows changes in wages for some of the principal occupational and industrial groups from 1901 to 1941, and for certain other groups from 1911, 1913 and 1920 to 1941.

Included also in the report are tables showing the wages and working hours of the principal classes of labour in most industries throughout Canada. Appendices give information as to minimum wage rates, and maximum hours of work under provincial legislation, wages and hours of labour under collective agreements, etc. Information is also supplied as to federal government fair wage policy. Tables are included in the appendices showing wages in agriculture, and average earnings of steam railway employees and coal miners with numbers employed.

Result of Wage and Price Control in Canada

The advantages of the Maximum Prices Regulations, administered by the Wartime Prices and Trade Board, to the public of Canada, and particularly to labour, is becoming increasingly apparent.

During the last war the cost-of-living index rose from 100 in July, 1914, to 137·2 in October, 1917. During the corresponding period in the present war the index rose from 100 in August, 1939, to 116·9 in October, 1942.

During the last war the index rose from 116·1 in October, 1916, to 137·2 in October, 1917. In the corresponding period of the present war the index rose only from 114·6 in October, 1941, to 116·9 in October, 1942.

It is apparent, therefore, that during the period of a little more than three years in the last war the cost-of-living index rose more than twice as much as during the corresponding period in the present war, but that in the last eleven months, during which period the Price Control Regulations have been in effect, the cost-of-living index has risen only one-tenth as much as it did during the corresponding eleven months period of the last war.

Even now the cost-of-living index number is at a slightly lower level than it was during 1918.

Undoubtedly, wage rates and earnings are now at a materially higher level than they were in 1918, and the cost-of-living index figures quoted make it evident that the purchasing power of the wage dollar has not during the present war been nearly as seriously affected to the disadvantage of wage earners as it was during the last war, and this is quite apart from the advantages enjoyed by workers in industry generally in the payment to them of cost-of-living bonuses under the application of the provisions of the War-time Wages Control Order.

It is likewise apparent that there will be continuing and increasing advantages to labour under the Price Control Regulations if the cost-of-living index can be held at approximately its present level of 116·9. During the last war the cost-of-living index rose from 137·2 at October 1, 1917, to 141·3 at January, 1918, and 160·5 at January, 1919, and to 178·8 at January, 1920, reaching its peak of 198·0 at June, 1920.

Industrial Disputes Investigation Act

Eighteen applications for the establishment of Boards of Conciliation and Investigation were received during the month of October. Three boards were established in October, and the constitution of six boards was completed. Six boards submitted their reports. Three applications were rejected. Thirteen disputes were referred to Industrial Disputes Inquiry Commissioners for investigation and seven reports were received from Industrial Disputes Inquiry Commissioners. Three disputes were recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found in the section beginning on page 1247.

New Zealand establishes Emergency Labour Disputes Board

A National Emergency Disputes Board to settle disputes likely to interfere with the production of supplies or the maintenance of essential services has been provided for in New Zealand by the Industrial Disputes Emergency Regulations, September 4, 1942. The Board is to consist of two representatives of employers, two of workers and a chairman all appointed by the Minister of Labour. When a dispute arises, the Board may act on its own motion or at the request of the Minister. It has power to conduct hearings, render decisions and issue orders for their execution. When a Disputes Committee provided for in an award or agreement fails to act in connection with a dispute, the Board may compel it to do so, but if the Committee does not succeed in effecting a settlement, the Board may decide the matter. The Board may also inquire into any question connected with a dispute and for this purpose is endowed with full powers under the Commissions of Inquiry Act.

Workers and employers who interfere with production of supplies or the maintenance of essential services or who fail to comply with a decision of the Board are liable to prosecution. If by reason of a dispute, employees cease work, break their contracts of service, reduce their normal output, refuse to accept any work usually connected with their job or attend a stop-work meeting not authorized by award or agreement or by their employer, they are guilty of an offence. Employers who suspend operations, dismiss a worker, break contracts with their employees or fail to engage necessary workers, also violate the regulations.

British Trades Union Congress

The Seventy-fourth Convention of Britian's Trades Union Congress was held at Blackpool, September 7 to 11, 1942, with slightly more than seven hundred delegates representing a membership of approximately 5,443,000.

Mr. F. Wolstencroft in his presidential address expressed the earnest hope that when the war is over—and perhaps before it ends—arrangements can be made between the Trade Union Movement of Australia, Canada, the South African Union, and India, for periodical conferences with the British T.U.C. Negotiations have already begun with American and Soviet trade unions for an international trade union committee.

The place of workers in the struggle for victory was set forth in a resolution which was adopted and which expressed the unalterable resolve of British workers to see the war through to the end in complete and final victory and to spare no effort to establish the conditions of a just and lasting peace. It called upon workers of all grades and categories to give increased production of all weapons and munitions of war, and pledged the fullest support of the British trade union movement so soon as the competent authorities decide that the time has come to launch an effective offensive action in Europe. After a discussion on international affairs another resolution was adopted, welcoming the Anglo-Soviet Treaty and urging the General Council to continue to develop relations between the trade unions of the United Nations.

On the question of war production a resolution was passed which expressed dissatisfaction with the composition and function of the Ministry of Supply and Controls and demanded that trade unions be represented and participate in all discussions and decisions of the Control Advisory Councils.

A resolution demanding that the Government take over control of industries and staff vital to the war effort was carried. Mr. Jack Tanner, supporting this resolution, said that lack of co-ordination at the top was having a bad effect on production and affecting managements as well as workers.

A resolution demanding the setting up of a Central Planning Board was adopted. A resolution recording dissatisfaction with the National Arbitration Tribunal and instructing the General Council to press for its immediate reconstitution was carried. The General Council was instructed to urge the amendment of the Essential Work Orders by making compulsory the setting up of Joint Production Committees and widening their scope and power.

A number of resolutions dealt with laying down policy on various social issues. A resolution was passed demanding for women, equal pay for equal work both now and after the war, the same training facilities in post-war industry and the same rights of reinstatement as men. On the question of compulsory enrolment of women for fire-guard duty the Congress supported the Government's view that women must be put in the same position as men, but "if men and women were fighting a common peril they should be compensated equally for injury."

A memorandum by the General Council on Education after the War, set out proposals for a revision of the educational system for children aged 11 years and upwards, was dis-

65552—2½

cussed and approved. (Reference to the proposals for educational reform appear on page 1287.).

War-time employment of women in shipbuilding and allied industries in Great Britain

The Ministry of Labour and National Service in Great Britain recently issued a leaflet calling attention to the urgent need for the increased war-time employment of women in the shipbuilding and allied industries, and giving general indications regarding particular aspects of the recruitment of women for suitable occupations in those industries. The use of womenpower for such work in Great Britain is similar to recent developments in Canada where women have been introduced for the first time into mining operations for surface work. (LABOUR GAZETTE, October, 1942, page 1137).

The British Ministry of Labour Gazette in a review of the leaflet states that the extensive and expanding demands of most munitions industries, including such heavy industries as the iron and steel and chemical industries, have been met to a large extent by the introduction of women. In the shipbuilding industry, however, little use has, so far, been made of female labour, although many of the unskilled and semi-skilled operations offer considerable scope for the employment of women, and employers who have experience of the employment of women in their yards report favourably on them. The need for labour in the shipbuilding and allied industries is urgent and imperative, and men are not available from outside these industries. Accordingly, existing male labour must be used to the best effect, women replacing men on the lighter jobs, thus releasing them for heavier work on other jobs in which their experience can be used to the best advantage. In some yards a start has already been made, and examples are quoted in the leaflet of occupations in shipbuilding and ship-repairing, marine engineering and boatbuilding in which women have successfully replaced men.

Employers are, therefore, earnestly urged to continue their endeavours to substitute women for men and to experiment in the employment of women in new types of jobs for which men have been considered essential in the past. District Shipyard Controllers and Shipyard Labour Supply Officers have been asked to give all possible help, and employers are recommended to seek their advice and assistance.

As regards particular aspects of the employment of women on men's work in these industries, the leaflet refers to the need for consultation with trade union officials on the subject and contains some observations on the unsuitability of certain work for women, the provision of welfare facilities, and the existing administrative regulation of hours of work and overtime. The leaflet also contains, as an Appendix, the text of an Agreement concluded on the 17th July, 1941, between the Shipbuilding Employers' Federation and the Confederation of Shipbuilding and Engineering Unions, regulating the wages and conditions of employment of women employed in shipbuilding and ship-repairing establishments for the period of the war on work normally done by male labour.

Wage adjustments recommended for British coal-mining industry

The Board of Investigation appointed on June 5, 1942 by the Minister of Labour and National Service and the President of the Board of Trade to inquire into wages and conditions of employment in the coal-mining industry in Britain presented its report on June 18. The Mineworkers' Federation had asked for a wage increase and a guaranteed minimum; the Mining Association took the view that any increase should be in the form of a bonus for attendance and output. The Board recommended for all workers over 21 a flat increase of 2s. 6d. per shift and national minimum wages of 83s. a week for underground workers and 78s. for surface workers. No minimum wage was suggested for workers under 21. Underground workers between 18 and 21 should receive, it was considered the same wage increase as those over 21, but surface workers under 21 and underground employees under 18 should receive smaller increases which would vary with their age and the nature of their employment. In addition a sliding scale of output bonuses was recommended for all production over a standard fixed for each pit.

The Mineworkers' Federation had asked for somewhat higher rates and had not suggested that and distinction be made between underground and surface workers. However the Board felt that differentiation was justified by the special conditions of underground work. The proposals of the Board apply to male workers actually engaged in "winning, raising and handling coal" and will apply to other male workers and women workers only in so far as such application would be in accordnace with existing practices. The Board estimated that the cost of its proposals exclusive of the output bonus would amount to about £23,500,000 a year, and that only about 3 per cent of the workers, mostly on the surface, were now receiving wages below the proposed minima.

The Board pointed out that miners' wages consist of a basic rate, certain first-rate additions such as war bonuses, and "percentage additions" which depend on the proceeds from the sale of the coal produced, percentage rates have, in many cases, been declining due to such factors largely beyond the workers' control as wartime labour shortage, a rise in costs, and controlled prices. To protect workers against further reductions in percentage rates, to ensure that they would receive a stable increase over existing wages the Board suggested that the ruling percentage rates in effect on June 1, 1942, should be taken as the minimum rates to which the wage increase recommended by the Board would be added, or that the increase should vary with the variations in percentage rates so that wages would remain the same.

In regard to the output bonus, the Board suggested that a standard tonnage be fixed for each pit, and for any four-weeks period in which output exceeds the standard tonnage earnings should be increased by a special payment dependent on the amount by which the standard is exceeded. The standard should be adjusted when the productivity of the pit changes for more than a fortnight due to changes in man-power or other reasons beyond the control of the workers or management.

The Government and both sides of the industry have accepted the Board's recommendations, and a 3s. per ton increase in the price of coal was authorized to meet the rise in wages and other increased costs. Subsequently, at the request of employers and workers the Board worked out a scheme for determining output bonuses on the basis of district rather than individual pit output. The scheme was put into effect September 6 for a three-month trial period.

Recruitment of Juveniles in British Coal-Mining Industry

In Great Britain the first report of a Committee of Enquiry into the recruitment of boys and youths for the coal-mining industry indicates that the number of young entrants to the mining industry has fallen from an annual total of 30,000 to a present figure of slightly over 14,000 in the year. This rate of recruitment falls far short of the gross wastage rate arising from deaths or retirements through age or incapacity.

As the main operative causes of the reluctance of boys to enter the coal-mining industry the Committee enumerate various factors, particularly the past record of the indusry as regards unemployment, the wage level, the widespread feeling that the type of employment provided by the industry is uncongenial because of conditions peculiar to the industry, and the widened choice of occupations open to boys in mining districts as the result of the development of facilities for local transport. These causes, the Committee state, are not likely to be removed by short-term remedies. If boys are to be attracted in adequate numbers to the industry, it will be necessary to provide a greater sense of economic security and a firmer assurance of a progressive career.

To this end, the Committee put forward a number of recommendations designed to serve as the basis of a long-term recruitment policy. These recommendations are governed by a single general principle, viz., that every effort should be made to increase the sense of economic security for persons who enter the coal-mining industry, that adequate provision should be made for the systematic training of new entrants for the work which they will be called upon to perform, and that, as far as possible, the new entrant will be assured of a regular progress up to the stage when he qualified as an adult workman in his occupation.

As regards training, the principal recommendations of the Committee propose that all new juvenile entrants to the coal-mining industry should undergo a period of training during ordinary working hours and be paid the appropriate rate of wages, according to the prevailing scale for juveniles. The initial training period should be not less than sixteen weeks. The first eight weeks should be devoted to general instruction at a suitable centre (at the headquarters of a colliery or group of collieries, or at a convenient mining school or institute), together with practical demonstration at a non-productive underground gallery specially prepared for the purpose. The second eight weeks should be devoted to practical work in an actual production unit to be reserved and worked for training purpose at the pit or group of pits at which the trainee is employed.

At the age at which youths are eligible for work at the coal-face, they should undergo further training, extending over not less than six months, on all relevant coal-face operations, the training being given at the actual production unit reserved and worked for training purposes at the pit or group of pits at which the youth is employed.

Other recommendations of the Committee on the long-term aspects of the problem of

the recruitment of boys for coal-mining advocate the continuance into the post-war period of the guaranteed week, as embodied in the Essential Work Orders and the compulsory medical examination of the boys, as part of the proposed Mines Medical Service.

With regard to the immediate need to recruit additional juveniles for the industry, the principal recommendation of the Committee proposes that the Minister of Labour and National Service should allow youths in other industries, on reaching the age of 18½ years, for coal-mining employment as against military service.

Transfer of mine workers in U.S.

The War Man-power Commission in the U.S. issued a directive on October 7 designed to divert to the non-ferrous metal industry the production and maintenance workers released as a result of the War Production Board's recent order closing all large gold mines. One estimate indicates that about 3,250 men were released by this order.

The directive of the War Man-power Commission prohibits employers from taking former gold-miner workers for work in any state west of the Mississippi except upon referral of such workers to the employers by the United States Employment Service. It also directs the Employment Service to refer all ex-gold-miner workers to jobs in the non-ferrous metal industry unless such a referral would entail undue hardship upon the workers or would not be in the best interests of the war effort.

Provision for appeal is also included for employers and employees who are not satisfied with an act or failure to act under this directive.

Reference to the transfer of gold-mine workers in Canada was made on page 1137 of the October LABOUR GAZETTE.

Survey in United States intended to facilitate employment of women

Paul V. McNutt, chairman of the War Man-power Commission in the United States, has requested employers to make an immediate survey of all jobs in their organizations to determine which can be filled by women. He asked that preparations be made to employ the largest number of women possible. He also asked management and labour organizations to remove all bars to the employment of women in occupations to which they are or can be fitted.

The United States Employment Service has listed over 460 industrial jobs as suitable for women, though 40 per cent of these would be suitable only with some break-down of the job or rearrangement of the industrial process to enable women to perform them. At the time this list was compiled women worked in only a small proportion of these occupations.

The United States Department of Labor, noting the rapid increase in the employment of women workers, anticipates that nearly two million women will have been taken on by industry during the last six months of 1942. This will bring total woman-employment to a peak of over fifteen million, of whom about three and a half million will be engaged in war work.

United States policy on employment of mothers of young children

The United States War Man-power Commission has recently issued a statement recommending that the employment of mothers of young children be deferred until all other sources of labour are exhausted and proposing conditions of employment for this class of worker which will secure the minimum disruption of normal home life. Employers should not refuse to hire women of this class but should let each woman decide whether her home responsibilities permit her to accept employment. If women with young children are employed, their hours and shifts should be arranged so as to interfere as little as possible with their home duties. The Commission recommended that community projects be developed to provide day-time care for the children of working mothers who are unable to make other arrangements for them. The provision of such facilities is to be promoted by the Office of Defence Health and Welfare Services which has been authorized to co-ordinate the activities of all government departments concerned with this problem.

The Federal Government has announced that it will make grants-in-aid to States unable to finance programs of day-care for the children of working mothers by other means. The State departments of Welfare or Education are to administer such programs which must be approved by the Federal Children's Bureau or the Commissioner of Education. The Day-Care Unit of the Children's Bureau is preparing statements of policy to guide State authorities and will provide child-welfare field consultants to assist the States in developing their programs.

Consultation service on accident prevention in the United States

The services of experts on accident prevention are made available free of charge for consultation purposes to plants in the United States engaged in war production. This is the result of a plan put into effect by the National Committee for Conservation of Man-power in War Industries which was set up in 1940 by the Secretary of Labour to help in reducing casualties on the production front (LABOUR GAZETTE, 1940, p. 1105). The members of the Committee serve on a voluntary basis and include safety experts from private industry, representatives of organized labour and State officials administering safety and health laws.

According to a bulletin it issued recently, the Committee now has 450 special agents at work throughout the country in strategic war production centres. These agents are practical industrial safety experts who are employed by some of the country's leading firms. Their companies permit them to spend part of their time in helping other plants to cut down accidents and in addition they devote much of their spare time to this work. They make available to management the information they have accumulated from personal experience or from other safety experts and agencies on methods whereby specific accident and health hazards can be corrected and plant safety programs developed. The Division of Labor Standards of the U.S. Department of Labor serves as a co-ordinating office and clearing house for the National Committee.

The Committee also offers free safety training courses to foremen and supervisors. These courses are conducted by local engineering colleges in war-production centres. Finally, the Committee issues popular and technical bulletins on safely as well as posters.

Accident prevention in Sweden

A joint committee consisting of representatives of the Employers' Federation and the Federation of Trade Unions, which was set up in Sweden to study industrial safety problems, has recently presented its report, which is summarized in the latest *Industrial Safety Survey* of the International Labour Office. The report stresses the necessity of combating accident risks not merely by technical measures such as protective devices, good lighting, suitable tools, etc., but also by psychological means. Among the latter are included education by lectures, posters, works instructions, etc., and also occupational selection according to the principle of "the right man in the right place". With regard to occupational selection the conclusions of the Committee are similar to those of the Industrial Health Research Board in Great Britain (LABOUR GAZETTE, October, 1942, p. 1176). It is pointed out that only about 25 per cent of industrial accidents occur in connection with machinery and that 15 to 25 per cent of workers account for about 50 per cent of all industrial accidents. This seems to indicate that certain persons are particularly "accident-prone" and that good results can be obtained by influencing the human factor.

One of the most important points dealt with in the report concerns the workers' safety delegates who are to be found in many plants. The Committee states that such delegates should "enjoy complete immunity as to their person, position and remuneration," and that they should be allowed to devote much more time than at present to safety. Moreover, in workplaces with more than 100 workers safety committees should be appointed consisting of the workers' safety delegates and of plant engineers, foremen and others representing the management.

Food in war and post-war

"Will Food Win the War?" and "Canada in a Hungry World" by Andrew Stewart, are two pamphlets in the series "Behind the Headlines" recently published jointly by the Canadian Institute of International Affairs and the Canadian Association for Adult Education. They make a contribution to present-day discussions on the relation of food to victory and the place of farm products in the post-war world.

In order to appraise the part which food may play in winning (or losing) the war, Mr. Stewart points out the necessity of considering the manner in which food may contribute to military victory (or defeat), and the manner in which it may contribute to political stability (or disintegration) at home. Of the many factors that may contribute to the breakdown of political unity and of civilian war effort, it is emphasized that indirectly, food may be a factor because marked inequalities in the food available to persons within any nation, or between allied countries may destroy the united effort. Directly, food is important in supporting the capacity of workers to produce, and in maintaining civilian morale.

In combating inefficient production the importance of food is discussed. During wartime, the imperative need for essential war materials requires unusual effort on the part of men and women in industry. But to provide energy and effort in production the

human machine must be adequately supplied with fuel; and to persist in production it must be repaired and maintained. This is the direct function of food. The capacity of the workers to sustain their productive effort depends, to a large extent, on the provision of adequate diets.

With Great Britain, and now Russia, occupying essential positions in the war strategy of the United Nations but deficient in domestic food production, the position of the United Nations is always precarious. If we can assume that great food-producing countries like Canada will be willing to make every sacrifice to provide the food for Britons and Russians, then the food problem of the United Nations is a problem of shipping. The problem can be met, and these two countries adequately supplied with food, only by the utmost economy in the use of shipping for the movement of food, by a shipbuilding effort sufficient to make good the tonnage lost at sea, and by destruction of Axis submarines at sea, in their bases, or in construction yards.

"Canada in a Hungry World" is a brief consideration of some of the conditions on which the reorganization of post-war society depends. The assistance to needy countries for the first few years and more permanent arrangements of production, distribution and consumption of farm products in the post-war world are topics of discussion. The author expresses the hope that the post-war world will see the development of ways in which the risks of farm production may be spread more widely with provision for a larger measure of security for farm producers than they have experienced in the past.

Welfare Conditions Among British Women in the Armed Services

The Committee on Amenities and Welfare Conditions in the three Women's Services, appointed in Britain last February as a result of rumours and complaints regarding conditions in the Services, presented its report to Parliament in August. The Committee considered problems of organization and staffing, employment and conditions of work, health and morals, clothing, housing, feeding, educational and recreational services and other welfare conditions among women in the Army, Navy and Air Force. It found in general, that the charges levelled against the Services were unwarranted and pointed out that the rapid expansion of the Services from almost non-existent foundations would inevitably cause temporary conditions of hardship which were being gradually remedied.

The Committee made a number of recommendations regarding organization in the Services. It stressed the need for more recruits to replace men for combat work; and recommended also that women in the Services doing work which could be done by part-time civilian workers should be transferred to more active duties. It also suggested that the exemption from service of the childless wives of service men be reconsidered.

In regard to employment, the report urged that hours of work should be limited to eight a day and forty-eight a week and that rest-pauses, preferably in the open air, be granted. It pointed out that "irregular rhythm of working hours is injurious to health" and suggested that shift systems be arranged so that hours are regular, and that women on continuous shift work do the same watch regularly for a fortnight before changing over.

The importance of providing adequate educational opportunities for members of the Services was stressed and the appointment of education officers proposed. It was suggested that voluntary local welfare officers who link the Services with the civilian community should hold periodical meetings to exchange ideas.

Other recommendations urged improvement in accommodation and more careful inspection of billets, the provision of better recreational services particularly on remote sites, the use of intelligence tests for selecting recruits, improvements in medical supervision especially in regard to the treatment of minor ailments, and the arrangement of entertainment and comforts for members travelling or on leave.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

REPORTS were received during the past month from four Boards of Conciliation and Investigation established to deal with the following disputes.

1. Between the Granby Consolidated Mining, Smelting, and Power Company, Limited, the Princeton Tulameen Coal Company, Limited, and Tulameen Collieries, Limited, all of Princeton, B.C., and their respective employees, members of Local 7875, United Mine Workers of America;

2. Between the Canadian Car and Foundry Company, Limited, and employees in its Longue Pointe Works, Montreal, P.Q., members of Local 2525, United Steelworkers of America;

3. Between the Canadian Car and Foundry Company, Limited, and employees in its Turcot Works, Montreal, P.Q., and employees, members of Lodge 712, International Association of Machinists (supplementary report);

4. Between Chrysler Corporation of Canada, Limited, Chatham, Ont., and its employees, members of Local 127, United Automobile Workers of America.

The texts of these reports will be found at the end of this statement.

Applications Received

During the month of October, eighteen applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour as follows:—

1. From employees of the Manitoba Rolling Mill Company, Limited, Selkirk, Man., members of the Selkirk Rolling Mill Employees' Federal Union No. 120. The dispute, which arose out of a request for union recognition and the negotiation of an agreement providing for increased wages and improved working conditions, was said to directly affect about 474 employees. On October 15, Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, Regina, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

2. From employees of Border Cities, Limited, Windsor, Ont., members of Local 195, United Automobile Workers of America. Nine hundred employees were said to be directly affected in the dispute which developed out of a request for union recognition and the negotiation of a collective agreement. On October 26, Mr. Louis Fine, Chief Conciliation Officer, Ontario Department of Labour, Toronto, was authorized to investigate the dispute.

3. From employees of Canadian Copper Refineries, Limited, Montreal, P.Q., members of Local 23184, Copper Refiners' International Union affiliated with the A.F. of L. The dispute, which concerns the negotiation of a collective agreement, is said to affect 300 employees directly. On October 23, Mr. Bernard Rose, K.C., Montreal, was authorized as Industrial Disputes Inquiry Commissioner, to investigate the dispute. At the end of the month, the Commissioner advised that the inquiry had been adjourned in order to give the employees an opportunity of submitting a request for increased wage rates to the Regional War Labour Board for Quebec.

4. From employees of the Canadian Pacific Railway Company, Vancouver, B.C., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Sixteen employees are said to be directly affected by the dispute which arose out of the employees' request for the negotiation of a collective agreement. Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour is investigating the dispute.

5. From employees of Vulcan Iron Works, Limited, Winnipeg, Man., members of Local 126, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, Local 565, International Brotherhood of Blacksmiths, Drop Forgers and Helpers; Local 174, International Moulders and Foundry Workers' Union of North America; and Lodge 646, International Association of Machinists. About 563 employees are said to be directly affected by the dispute, which concerns union recognition and the negotiation of a collective agreement. On October 17, Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, Regina, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

6. From certain employees of Dowty Equipment, Limited, Montreal, P.Q. The dispute, which was said to affect 70 employees, directly concerned the dismissal of three employees allegedly because of their efforts to have employees' grievances brought before their employer. Prior to the receipt of the application, Mr. Bernard Rose, K.C., Montreal, had been authorized, as Industrial Disputes Inquiry Commissioner, to investigate

the dispute, and during his investigation the application for the establishment of a Board was received. Mr. Rose was able to effect a settlement of the dispute, the dismissed employees being reinstated, it being agreed by the parties that the question of the establishment of a shop committee would be considered. The application for the establishment of a board was withdraw October 15.

7. From employees of Belding-Corticelli, Limited, Montreal, P.Q., members of the International Union of Silk Hosiery Employees. The dispute, which concerns union recognition and the negotiation of a collective agreement, is said to concern 400 employees directly. On October 13, two hundred and seventy-six employees gave notices of separation which were accepted by the employer. It is reported by the company that seventy-eight of these employees subsequently returned to work. On October 26, Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute. A further reference to this dispute will be found in the table in this issue dealing with strikes and lockouts in Canada.

8. From employees of Gotfredson, Limited, Walkerville, Ont., members of Local 195, United Automobile Workers of America. The dispute, which is said to affect 900 employees directly concerns union recognition and the negotiation of a collective agreement. Mr. Louis Fine, Chief Conciliation Officer, Ontario Department of Labour, Toronto, was authorized to investigate the dispute.

9. From employees of Riverside Iron Works, Limited, Calgary, Alta., members of Local 360, International Moulders and Foundry Workers' Union of North America. A strike occurred on September 24. The dispute, which concerns union recognition and the negotiation of a collective agreement is said to affect about 86 employees directly. A strike took place at the end of September previous to the receipt of the application for a board. After work was resumed, Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, Regina, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. He reported that he was unable to effect a mutually satisfactory settlement and the employees then submitted their application for a board. The personnel of the board which was established November 2 is as follows: His Honour Judge J. W. McDonald, District Court Judge, chairman, appointed on the joint recommendation of the other two members; Mr. Gordon G. Cushing, appointed on the nomination of the employees; Mr. C. S. Blanchard, K.C., appointed on the nomination of the employer. All three reside in Calgary.

10. From certain employees of Montreal Tramways Company, Montreal, P.Q., members of Local 790, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, and the National Catholic Union of Street Railway Employees (Bus Drivers' Section). On October 29, Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

11. From employees of Shawinigan Chemicals, Limited, Shawinigan Falls, P.Q., members of Local 357, International Moulders and Foundry Workers' Union of North America. The dispute concerns union recognition and the negotiation of a collective agreement, it being said that approximately 175 employees are directly affected and 2,000 indirectly. On October 26, this dispute was referred to Mr. Bernard Rose, K.C., Montreal, who, as an Industrial Disputes, Inquiry Commissioner, was authorized to make an investigation.

12. From employees of Hull Iron and Steel Foundries, Limited, Hull, P.Q., members of Local 318, International Moulders and Foundry Workers' Union of North America. The dispute, which is said to affect 750 employees directly and 800 indirectly, arose out of a request for the recognition of the union as the employees' bargaining agent.

13. From employees of the Imperial Tobacco Company of Canada, Limited, members of Local 234 of the International Union of Tobacco Workers. Some 3,100 employees are said to be directly affected in the dispute. On October 22 ,Mr. Bernard Rose, K.C., Montreal, was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

14. From employees of W. C. MacDonald, Incorporated, Montreal, P.Q., members of Local 235, International Union of Tobacco Workers. Sixteen hundred employees are said to be directly affected by the dispute. On October 22, this dispute was also referred to Mr. Bernard Rose, K.C., as an Industrial Disputes Inquiry Commissioner, for investigation.

15. From employees of Leeder's Limited, Winnipeg, Man., members of Lodge 646, International Association of Machinists. The dispute, which arose out of the employees' request for a collective agreement negotiated through their own representatives, is said to affect 85 employees directly. Subsequent to the receipt of the application the Department was informed that certain employees had been dismissed following the application for a Board of Conciliation and Investigation.

The Company stated that these employees were dismissed for cause. On October 22, Mr. T. W. Laidlaw, K.C., Winnipeg, was appointed an Industrial Disputes Inquiry Commissioner to investigate these dismissals.

16. From employees of Montreal Stock Yards, Limited, Montreal, P.Q., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. This dispute arose out of the employees' request for the negotiation of an agreement.

17. From employees of Searle Terminal, Limited, Fort William, Ont., members of Lodge 650, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. This dispute, which is said to affect 50 employees directly and 700 indirectly, arose out of the request for the negotiation of an agreement.

18. From employees of Robert Mitchell Company, Limited, Ville St. Laurent, P.Q., members of the United Steelworkers of America. The dispute, which is said to affect 450 employees directly, arose out of the employees' request for the negotiation of a working agreement and reclassification of occupations and wages.

Other Boards Established

On October 23, a Board of Conciliation and Investigation was established to deal with a dispute between Ontario Steel Products Company, Limited, Chatham, Ont., and its employees, members of Local 127, United Automobile Workers of America (LABOUR GAZETTE, October, 1942, p. 1121). On September 25, Mr. J. S. McCullagh, Industrial Relations Officer, Dominion Department of Labour, Ottawa, was appointed an Industrial Disputes Inquiry Commissioner, to investigate the dispute. The Commissioner's report, received on October 22, recommended the establishment of a board but the constitution of the Board was not proceeded with pending the outcome of further negotiations to bring about a settlement.

Change in Personnel of Boards

In the October issue of the LABOUR GAZETTE, p. 1121, it was reported that Senator Elie Beauregard, K.C., Montreal, P.Q., had been appointed on the nomination of the employer to a Board established to deal with a dispute between the Canadian Marconi Company, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's Marconi Union. On October 2, Senator Beauregard resigned from the board and, in the absence of another nomination from the employer, the Acting Minister of Labour appointed Mr. Walter Merrill, K.C., Montreal, to replace Senator Beauregard.

On October 21, pursuant to Section 65 of the Industrial Disputes Investigation Act, the Acting Minister of Labour established a Board of Conciliation and Investigation to deal with the dispute between Howard Smith Paper Mills, Limited, Beauharnois, P.Q., and its employees. A strike, involving 475 employees directly, had occurred on October 1. At the end of the month two members of the board had been appointed. Mr. Maximilien Caron, Montreal, P.Q., nominated by the employees; Mr. Paul Bourget had been appointed to the board on the nomination of the employer, however he subsequently was unable to act and Mr. C. N. Moisan, Montreal, P.Q., was appointed in his stead.

Other Boards Fully Constituted

The constitution of the Board of Conciliation and Investigation established in September to deal with the dispute between the Allison Logging Company, Limited, the Kelley Logging Company, Limited, J. R. Morgan, Limited, and Pacific Mills, Limited, Queen Charlotte Islands, B.C., and their respective employees, members of Local 1-71, International Woodworkers of America (LABOUR GAZETTE, October, 1942, p. 1122) was completed during the month of October. The personnel of the board is as follows: His Honour Judge A. M. Harper, chairman, appointed on the joint recommendation of the other two members; Mr. R. H. Tupper, appointed on the nomination of the employer; and Mr. Arthur J. Turner, M.L.A., appointed on the nomination of the employees. All three reside in Vancouver, B.C.

The constitution of the Board of Conciliation and Investigation established in September to deal with the dispute between the Canada Paper Company, Windsor Mills, P.Q., and its employees, members of the National Catholic Union of Canada Paper Company Employees (LABOUR GAZETTE, October, 1942, p. 1122), was completed during the month of October. The personnel of the board is as follows: The Honourable Justice Alfred Savard of the Superior Court of Quebec, Quebec City, chairman, appointed on the joint recommendation of the other two members; Mr. John E. Crankshaw, K.C., Montreal, P.Q., appointed on the nomination of the employer; and Mr. Gerard Picard, Quebec City, appointed on the nomination of the employees.

The Board of Conciliation and Investigation established in September to deal with a dispute between the Dominion Engineering Works, Limited, Longueuil, P.Q., and its employees, members of the Metal Trades Council of Montreal and vicinity (LABOUR GAZETTE, October, 1942, page 1122), was fully constituted during October. The personnel of the board is as follows: Mr. F. W. Edge,

chairman, appointed by the Minister of Labour, in the absence of a joint recommendation from the other two members; Mr. William C. Nicholson, K.C., appointed on the nomination of the employer; and Mr. James Somerville, appointed on the nomination of the employees. All three reside in Montreal.

Applications Rejected

In connection with the dispute between Bruck Silk Mills, Limited, Cowansville, P.Q., and its employees, members of the National Union of Silk Workers of Cowansville, Canadian Congress of Labour, (LABOUR GAZETTE, September, 1942, page 1004), it was found that, as the plant concerned was not engaged in war work, the dispute did not fall within the scope of the Industrial Disputes Investigation Act, as extended by Order in Council P.C. 3495 as amended. The parties to the dispute were advised that in these circumstances, the Minister of Labour could establish a Board of Conciliation and Investigation only on the joint application or with the joint consent of the parties concerned. As this joint consent was not given, the application for the establishment of a board was rejected on October 10.

On October 9, Mr. Bernard Rose, K.C., Montreal, who had been authorized as an Industrial Disputes Inquiry Commissioner to investigate a dispute between the Philip Carey Company, Limited, Lennoxville, P.Q., and its employees, reported that since a substantial majority of the employees had voted in favour of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers as their bargaining agent and as the Company had entered into an agreement with this union on August 25, he recommended that the application for a Board of Conciliation and Investigation be not granted. The application was therefore rejected and the interested parties were notified.

An application for the establishment of a Board of Conciliation and Investigation in a dispute between the Ontario-Minnesota Pulp and Paper Co., Ltd., Fort Frances, Ont., and its employees, members of Lodge 760, International Association of Machinists, Local 731, International Brotherhood of Electrical Workers, Local 92, International Brotherhood of Pulp, Sulphite and Paper Mill Workers, Local 306, International Brotherhood of Paper Makers, and Local 146, International Brotherhood of Firemen and Oilers, was ruled as not coming under the scope of the Industrial Disputes Investigation Act, it being a matter for decision by the Ontario Regional War Labour Board since the dispute concerned the extension of the existing provisions for vacations with pay.

Other Reports of Industrial Disputes Inquiry Commissioners

In the dispute between William Kennedy and Sons, Owen Sound, Ont., and its employees, members of Local 2469, United Steelworkers of America (LABOUR GAZETTE, October, 1942, page 1121), a report was received from Mr. F. J. Ainsborough, Industrial Relations Officer of the Dominion Department of Labour, Toronto, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. At the end of the month Mr. Ainsborough reported that as a result of the taking of two ballots in the plant, the United Steelworkers of America had been chosen as the bargaining agency in both sections of the plant. The company had previously agreed to enter into a collective agreement with the party or parties chosen by the employees.

A report was made September 21 by the Industrial Disputes Inquiry Commission appointed to inquire into the facts and circumstances pertaining to an application by District 18, United Mine Workers of America, for an order of the National War Labour Board requiring Canadian Collieries (Dunsmuir) Limited, to increase wage rates generally by 30 per cent at the Company's Nanaimo and Cumberland Mines on Vancouver Island, B.C. (LABOUR GAZETTE, October, 1942, page 1123). The Commission found that the Company was not in a position financially to grant any increase in wages. Subsequently the National War Labour Board directed that the Company "maintain and continue in effect the existing agreed schedule of basic wage rates for the occupational classifications covered by the application in conformity with the terms of the Supplementary Agreement of April 26, 1940, and payment of cost-of-living bonus in conformity with the provisions of the Wartime Wages Control Order P.C. 5963, subject to adjustment as required by any General Order of the National War Labour Board in accordance with the provisions of P.C. 5963."

On October 31, Mr. Louis Trottier, who had been appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute which had developed in the plant of Dominion Textiles Limited, Montmorency Falls, P.Q., reported an improvement in the situation.

Other Settlements

During October a settlement was reported in the dispute between McCord Radiator and Manufacturing Co., Walkerville, Ont., and its employees, members of Local 195, United Automobile Workers of America (LABOUR GAZETTE, August, 1942, page 890). The parties concerned have entered into a collec-

tive agreement. The agreement between the company and the union is summarized in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

On October 17, Mr. H. R. Pettigrove, Industrial Relations Officer, Dominion Department of Labour, Fredericton, forwarded to the Department copies of an agreement signed by the Atlantic Sugar Refineries, Limited, Saint John, N.B., and its employees, members of Local 20, Sugar Refineries' Workers' Union (Labour Gazette, October, 1942, page 1123). The employer also agreed to join in submitting an application to the National War Labour Board for New Brunswick requesting approval of certain clauses dealing with the payment of increased wages and overtime. A summary of the agreement will be found in the article entitled "Recent Industrial Agreements and Schedules of Wages" appearing elsewhere in this issue.

Reports of Boards in Disputes between Granby Consolidated Mining, Smelting and Power Company, Limited, the Princeton Tulameen Coal Company, Limited, and Tulameen Collieries, Limited, all of Princeton, B.C., and Their Respective Employees

Reports were received during the month of October from three Boards of Conciliation and Investigation established to deal with disputes involving the Granby Consolidated Mining, Smelting and Power Company, Limited, the Princeton Tulameen Coal Company, Limited, and Tulameen Collieries, Limited, all of Princeton, B.C., and their respective employees, members of Local 7875, United Mine Workers of America (Labour Gazette, February, 1942, page 133).

The personnel of the three boards was identical and was as follows: His Honour Judge H. H. Shandley, Victoria, B.C., appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. Clarence E. Smith, K.C., Calgary, Alta., appointed on the nomination of the employees; and Mr. F. W. Guernsey, Vancouver, B.C., appointed on the nomination of the employers.

The reports of the boards are signed by the chairman and the employers' nominee, Mr. Guernsey, and the minority reports were submitted by Mr. Smith, the employees' nominee.

The texts of these reports follow.

Reports of Boards

Victoria, B.C.
26th September, 1942.

Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa.

Sir,—

Re Industrial Disputes Investigation Act and re Dispute Between the Granby Consolidated Mining, Smelting and Power Company, Limited, Princeton, B.C., and Employees, Members of Local 7875, United Mine Workers of America.

I have the honour to report that the Board sat at Princeton, B.C., on the 31st day of March last and before hearing any evidence, Mr. Morrison representing the Employees stated that in pursuance of Section 24 of the Act an endeavour should be made to bring about a settlement and suggested both parties enter into a conference and this the Company's representatives readily agreed to, and at their suggestion the Board adjourned to be reconvened after the conference. The conference lasted many hours and then the Board was asked to reconvene and on so doing both parties thought an amicable agreement could be arrived at and at their request the Board was adjourned *sine die;* the Company undertaking that it would attempt to negotiate a contract with representatives from their own employees. In the interval, proposed contracts were submitted but finally the men's committee declined to negotiate further, they having come to the conclusion that any agreement to be made must be made with the Union and not with a committee of the men.

An official of the United Mine Workers of America, District No. 18, was present at all the conferences in an advisory capacity to the representatives of the employees, and although each party to the dispute blamed the other for the failure of the negotiations I am convinced that the real cause was that the Union strenuously objects to any agreement being made between the Company and a committee representing the employees and not with the Union because of statements made by Mr. Livett that such an agreement would jeopardize the principles of the trade union movement.

On being advised that no agreement had been arrived at the Board reconvened at Vancouver and evidence was taken on the 24th and 25th of August.

The Board having come to the conclusion that it had no jurisdiction to decide any dispute as to the rate of wages, the only matter left in dispute was as to whether there should be Union recognition.

The Company produces copper for sale—not coal—the colliery being operated to make power to operate the copper mine. The Company contended that for the past forty years it had satisfactorily negotiated with their employees and that no matter of dispute existed until the Union Officials entered into the Princeton area and therefore the policy the Company had adopted in the past should not be disturbed. In this case and for the time being I agree with this contention.

I am satisfied that the officials of the United Mine Workers of America District No. 18 think that this is an opportune time to enter into this area in the interests of the trade union movement and insist upon all the companies operating in the area entering into agreements with the Union and not a Committee of the men as heretofore, and that these agreements provide for a closed shop and check-off.

It was a statement made to the Board by Mr. Livett, that convinced me that at this time when there is a shortage of copper and fuel of all kinds it would not be in the interests of the nation that the Company be compelled to enter into an agreement with this Union. Mr. Livett's statement was that his Union considered that if a coal company could not pay the rate of wages paid in other parts of the Province then that Company should shut down. Now the coal in the Princeton area is of a low grade and cannot compete with Vancouver Island coal; consequently the operators cannot operate and pay the rate of wages paid to men working a higher grade of coal.

After giving the matter very careful consideration I am convinced that if the Company were compelled to enter into an agreement with the Union then a demand would be made to pay the same rate of wages as paid in other parts of the Province and when this demand could not be met the mine would be compelled to close down as that is the policy of the Union according to the statement made by Mr. Livett, and this, according to a public announcement made by the Minister of Mines in this Province, at a time when the production of copper is steadily falling and the situation becoming serious, producing less than in peacetime.

As I have already said, I am of the opinion that no contract should be made between the Company and the United Mine Workers of America, District No. 18.

I have the honour to enclose the report of Mr. F. W. Guernsey, concurring in my opinion, and also the report of Mr. C. E. Smith, K.C., which is to be submitted to you as a minority report.

I have the honour to be,
Sir,
Yours respectfully,
(Sgd.) H. H. Shandley.
Chairman.

VICTORIA, B.C.,
26th September, 1942.

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa.

Re Industrial Disputes Investigation Act and re Dispute Between the Princeton Tulameen Coal Company, Limited, Princeton, B.C., and Employees, Members of Local 7875, United Mine Workers of America.

SIR.—This Company has operated since July, 1937, employing from twenty to eighty-five men, according to the seasonal demand for coal. It is working in a low grade of coal and has never paid a dividend; in fact it borrowed from one of its members a large sum of money for working capital and has never been able to repay any part of it, about $70,000 being owing at this time.

The Company contended that it had always satisfactorily negotiated with its employees and that no matter of dispute existed until the officials of the United Mine Workers of America, District No. 18, entered the area and therefore the policy of the Company in the past should not be disturbed.

I find the same facts in this dispute as I did in the Granby dispute and am therefore of the same opinion, namely, that no contract should be made between the Company and United Mine Workers of America, District No. 18.

I enclose the report of Mr. F. W. Guernsey, concurring in my opinion, and the report of Mr. C. E. Smith, K.C., which is submitted to you as a minority report.

I have the honour to be,
Sir,
Yours respectfully,
(Sgd.) H. H. Shandley,
Chairman.

VICTORIA, B.C.,
26th September, 1942.

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa.

Re Industrial Disputes Investigation Act and re Dispute Between the Tulameen Collieries, Ltd., Princeton, B.C., and Employees, Members of Local 7875, United Mine Workers of America.

SIR.—I find the same facts in this dispute as I did in the Granby dispute. The only

matter of dispute that came before the Board was union recognition with a closed shop and check-off. For the reasons I gave in the Granby dispute, I am of the opinion that no contract should be made between the Company and the United Mine Workers of America, District No. 18.

I enclose the report of Mr. F. W. Guernsey, concurring in my opinion, and the report of Mr. C. E. Smith, K.C., which is to be submitted to you as a minority report.

I have the honour to be,
Sir,
Yours respectfully,
(Sgd.) H. H. Shandley,
Chairman.

Vancouver, September 21, 1942.

The Honourable The Minister of Labour,
Ottawa, Ontario.

Re Industrial Disputes Investigation Act and re disputes involving the Granby Consolidated Mining, Smelting and Power Company, Limited; the Princeton Tulameen Coal Company, Limited; and Tulameen Collieries, Limited, Princeton, B.C., and their respective employees, members of Local Union No. 7875, United Mine Workers of America.

Sir,—The Board of Conciliation in the above consisting of His Honour Judge H. H. Shandley of Victoria, Mr. C. E. Smith, K.C., of Calgary and myself, met at Princeton, B.C., on March 31st, 1942. This meeting was adjourned and, at the request of the Chairman, met again in Vancouver on August 24th and 25th, 1942. Evidence was given by both sides of the dispute at these meetings.

In the application of the employees to the Government the following demands were made:—

(1) Union recognition.
(2) Right of employees to bargain collectively.
(3) Deduction of union dues by check-off order.
(4) In the case of the Granby Company,—
  (*a*) Wages of miners' helpers.
  (*b*) Wages of hoistmen and rope riders.
(5) In the case of the Tulameen Collieries Limited,—
  (*a*) Equalization of wages with the rates paid by Princeton Tulameen Coal Company, Limited.

The demands (4) and (5) and all reference to rates of wages were not considered by the Board, in accordance with instructions given in a letter dated March 6th, 1942, from Gerald H. Brown, Assistant Deputy Minister of Labour, to the Chairman of the Board, His Honour Judge H. H. Shandley.

As there were no points raised regarding working conditions at the different mines, this left for consideration the demands (1), (2) and (3).

In reference to Demand No. (3), Deduction of Union Dues by Check-off Order. The evidence of the managers of the coal companies was that this demand had never been refused if a proper order by an individual employee was presented. This evidence was not refuted by any representative of the Union.

In reference to demand No. (2), Right to Bargain Collectively has never been refused, according to the management of the several coal companies. They have always been willing to meet representatives of their employees or individual employees and discuss any question which might come up. No evidence was submitted to disprove this statement.

The only question, therefore, left in dispute was demand No. (1), Recognition of the Union.

The representatives of the Union argued that the Union should be recognized on a closed-shop basis as it is the inalienable right of employees to belong to a union, also with the exception of Merritt, all other coal districts in British Columbia have recognized the United Mine Workers of America. Furthermore the majority of the employees of the coal mines demand it.

The employers state they have never denied the right of employees to belong to a union and have never discriminated against any man on account of his Union affiliations. That prior to the advent of the Union into the camp there had been harmony and good understanding between employer and employees. Since that time there has been distrust and antagonism.

That for a number of years past, direct negotiations have taken place between the employees and employers with satisfactory results to both parties. There was a mutual understanding of local conditions and it was contended that the injection of an outside organization into any negotiations would hamper the arrival at, and possibly disrupt, any agreement.

That it is the avowed policy of the Union to raise the scale of wages now paid at the Princeton mines to the basis paid at the coal mines on Vancouver Island and as the coal produced in the Princeton area is classed as a low-grade fuel and has to be sold at a lower price than the coal produced on the island, if the cost of production is raised, the

two coal mines, viz., the Princeton Tulameen Coal Company, Limited and Tulameen Collieries, Limited, will have to close down, to the disadvantage of the employees and the community at Princeton.

From the evidence submitted, I find there has been no objection on the part of the companies to the establishment of a Local of the Union in Princeton and no discrimination has ever been exercised against any member belonging to the Union. The companies have never refused to honour a proper order for the collection of any sums which may be due.

"Recognition of the union" therefore means that all regular Union dues, fines which may be assessed against any Union member and any other sums which may be considered necessary by the Union—be collected by the company and paid to an official of the Union.

This collective method of having the dues paid, I am satisfied, is the main cause of the dispute in the Princeton camp and I consider the employers are quite within their rights and justified in refusing to grant recognition to the United Mine Workers of America.

I would suggest that at each mine a regular Employees' Association be formed to facilitate the appointment of a representative Committee with power to consult with the management on questions which may arise from time to time.

Respectfully submitted,

(Sgd.) F. W. Guernsey.

Minority Reports

Industrial Disputes Investigation Act and re *the matter of the dispute between Granby Consolidated Mining, Smelting and Power Company, Limited, employer, and its coal miners and coal mine labourers, members of Local 7875, United Mine Workers of America, employees.*

This Board sat at Princeton on March 31 and after some preliminary remarks by the representatives of the parties, the Board adjourned in order that these representatives might meet in informal conference. Late that afternoon, after continuous conference and brief references to the Board, it was decided to adjourn the sitting *sine die*. This was done because the parties concerned advised the Board that there appeared to be a good chance of reaching an agreement, but that further time for negotiating would be necessary (Sec. 24). Incidentally, a preliminary objection to Mr. Locke appearing as a representative of the Granby Company, based on Section 42 of the Act, was dismissed by a majority decision of the Board. The question of his right to appear as a director was very properly brought to the attention of the Board by Mr. Locke himself.

A great deal of time elapsed without any settlement being reached. At the resumed sitting in Vancouver on August 24, both parties made statements and led evidence with respect to what had transpired since we had met in Princeton. Notwithstanding the attempt of each party to blame the other for the failure of the negotiations, it seems apparent that the real stumbling blocks to agreement between the parties are the very items which form this dispute, namely "Union Recognition", "Union Shop" and recognition of the "Check-Off" Order, which in view of the evidence and argument before the Board might be more extensively described as:

1. The refusal of the Granby Company to enter into an agreement with the United Mine Workers of America, or even carry on negotiations with District Officers of that Union or with its own employees if the said employees purported to be acting as members of the Local Union of the United Mine Workers of America, and
2. The demand by the employees of the Company who were members of the United Mine Workers of America for a "closed shop" or probably more properly described as a "union shop" and the collection of union dues, etc., by what is known as the "check-off" order.

As indicated above, a large portion of the evidence and information put before the Board dealt with the negotiations carried on during the adjournment, the reasons for the failure or collapse of these negotiations. Whatever the reason, and each party blamed the other, the question of failure to reach an agreement is probably fairly summed up in the evidence of Mr. Beatty, at p. 89 of the transcript where he says:

"I think the negotiations broke because of the very principle which we could not agree on, which is union recognition and the closed shop."

Notwithstanding the fact, which is not only of public notoriety but also admitted and proven, that the great majority of coal mine operators in British Columbia and Alberta recognize and have written agreements with the United Mine Workers of America, which agreements provide for a "closed" or "union shop", nevertheless the Granby Company says it will not enter into any agreement with this Union nor even negotiate with it.

The Company says that it is primarily a copper organization, that the coal mine is only a department, the output from which being entirely used, with very slight exception, for its own power plant and that to enter into an agreement or even negotiate with the United Mine Workers of America would

"divorce" the two departments. It is difficult to understand in what way the two departments would be "divorced" if the Company dealt with the United Mine Workers of America any more than they would be divorced if the negotiations or agreements were with a committee of the coal miners themselves. In either case the Company would be dealing with coal miners as distinct from copper miners or other employees.

Granby also suggests that "union recognition" and "union shop" interferes with management functions. However, the agreement proposed, as the agreements in force with other coal operators, contains the following clause, which effectively answers this contention:

> "The right to hire and discharge, the management of the mine and the direction of the working forces are vested exclusively with the Company, and the United Mine Workers of America shall not abridge this right. However, the Company agrees not to discharge employees or refuse work to applicants on account of, or because of their affiliation with the United Mine Workers of America."

The Company further says that agreements with the United Mine Workers of America would be unsatisfactory because it would necessitate dealing with officials who were not familiar with local conditions. This argument could apply to the great number of mines who now have an agreement with the United Mine Workers of America, but in any event it is clear that purely local matters are dealt with by the local union itself or by the Pit Committee. It is not without significance also, that this Company, which purports to be so concerned about negotiating with people who reside outside the district and therefore are probably not sufficiently familiar with local conditions, is itself governed and in this dispute was governed by the decision of a Board of Directors who apparently reside and certainly meet in the City of New York.

The Granby Company also says that the interests of the coal miners themselves can be better served if the Company deals with them directly without the intervention of the United Mine Workers of America. This contention necessarily presupposes the ability of the men to look after themselves. If, in doing so, they unanimously or almost unanimously decide to have the United Mine Workers of America act as their bargaining agent, and this without threats or coercion of any kind, surely the Company can't be justified in saying that such action is not in the interests of these men.

It is a notorious fact that small local labour organizations never have a chance of success against powerful and wealthy corporations if in endeavouring to secure what they believe to be their just demands, they use the method approved by the Privy Council in Young v. Canadian National Railways, (1931) 1 W.W.R. 49, at p. 54, namely, the calling of a strike. They are usually "starved out." This is not the case, however, if they are members of and therefore have the protection and support of a powerful and wealthy Union. It is public knowledge and was so indicated by the Company that the United Mine Workers of America is just such a union. Why shouldn't the Granby coal miners be entitled to the backing of this strong organization and why shouldn't the Granby Company, like practically every other coal company, recognize this right by recognizing the union?

Since Mr. Locke has pointed out that the Board is entitled to consider matters which are of public notoriety it might not be amiss to remind ourselves that last year a similar dispute over union recognition came before a Board at Kirkland Lake, Ontario, which Board was headed by a Judge of the High Court of Ontario, and that the said Board unanimously recommended that the mine operators should bargain with union representatives It is, of course, of wide notoriety also that the strike which resulted from the operator's refusal to follow this recommendation was "starved out." Such an ending to a strike backed by the United Mine Workers of America, however, appears to be very unlikely.

The Granby Company also led evidence from which, it was intended that this Board should infer that officials of the United Mine Workers of America were troublemakers. In reply the men indicated, one of them rather heatedly, that Mr. Locke, the Canadian Counsel of the Company, as well as a director, was the person who caused the trouble. It seemed to me, after a consideration of all the evidence, that there was very little trouble except that caused by the demand for "union recognition" and "union shop" and the Company's refusal of both. There appears to be no more reason to call the union officials troublemakers because of these demands, than there is to call the Company officials troublemakers because of their refusals.

Because of their notoriety, Mr. Locke, in his written submissions, at pp. 14 and 15, refers to three occasions which he suggests prove bad or weak leadership on the part of the United Mine Workers of America. By reason of this alleged poor leadership, he submits that this Board should not recommend that the Granby Company be required to contract with this Union. In view of this submission,
